

4A0-113 Learning Mode & 4A0-113 Interactive EBook

What's more, part of that TestBraindump 4A0-113 dumps now are free: <https://drive.google.com/open?id=1KIEl9DauOUSpi85W-FxvcOQyrMx9Oes>

First of all, we have the best and most first-class operating system, in addition, we also solemnly assure users that users can receive the information from the 4A0-113 certification guide within 5-10 minutes after their payment. Second, once we have written the latest version of the 4A0-113 certification guide, our products will send them the latest version of the 4A0-113 Test Practice question free of charge for one year after the user buys the product. Last but not least, our perfect customer service staff will provide users with the highest quality and satisfaction in the hours.

Nokia OSPF Routing Protocol is a critical component of modern networking infrastructures, and it is widely used by service providers and enterprises around the world. This protocol provides a scalable and reliable way of routing IP traffic across large networks, and it is known for its robustness and flexibility. Professionals who are certified in Nokia OSPF Routing Protocol are highly sought after by employers, as they are able to design, implement, and troubleshoot OSPF networks with ease.

Nokia 4A0-113 Certification Exam is a vendor-neutral certification, which means that it is not tied to any specific hardware or software platform. This makes it an attractive certification for networking professionals who want to demonstrate their expertise in OSPF and increase their career prospects.

4A0-113 Interactive EBook, 4A0-113 Simulation Questions

At TestBraindump, we are committed to providing our clients with the actual and latest Nokia 4A0-113 exam questions. Our real 4A0-113 exam questions in three formats are designed to save time and help you clear the 4A0-113 Certification Exam in a short time. Preparing with TestBraindump's updated 4A0-113 exam questions is a great way to complete preparation in a short time and pass the 4A0-113 test in one sitting.

Nokia 4A0-113 Exam is targeted at network engineers, administrators, and architects who work with Nokia equipment and have a good understanding of IP routing protocols. Candidates should have experience with configuring and troubleshooting OSPF in a production environment and be familiar with Nokia's implementation of the protocol.

Nokia OSPF Routing Protocol Exam Sample Questions (Q100-Q105):

NEW QUESTION # 100

Click the exhibit button.

Exhibit 4.3.h

•OSPF Version	: 2	•OSPF Version	: 2
•Router Id	: 13.0.0.2	•Router Id	: 13.0.0.1
•Area Id	: 0.0.0.0	•Area Id	: 0.0.0.0
•Checksum	: 7c0e	•Checksum	: 865e
•Authentication	: Null	•Authentication	: Null
•Authentication Key: 00 00 00 00 00 00 00 00		•Authentication Key: 00 00 00 00 00 00 00 00	
•Packet Type	: DB_DESC	•Packet Type	: DB_DESC
•Packet Length	: 32	•Packet Length	: 32
•		•	
•Interface MTU	: 9000	•Interface MTU	: 9000
•Options	: 000042	•Options	: 000042
•Flags	: 7	•Flags	: 7
•Sequence Num	: 77793	•Sequence Num	: 75667

The OSPF packets shown have been exchanged between two neighbors. What state is the OSPF adjacency in?

- A. The adjacency state is two way because both routers have received a database description packet.
- B. The adjacency is in the exchange state. The next step is to exchange link state request and link state update packets.
- **C. The adjacency is in the ex start state. The routers have exchanged database description packets, but still have to negotiate the starting sequence number.**
- D. The adjacency state is full. The routers are exchanging database description packets to notify each other that all link state advertisements have been received.

Answer: C

NEW QUESTION # 101

Static routing will be used in a network between a corporate head office, with many connected networks, and a branch office, with one connection to the head office. Which of the following best describes the likely configuration?

- A. The corporate head office router and the branch office router will both have specific static routes.
- B. The corporate head office router will have a default route and the branch site will have a more specific static route.
- C. The corporate head office router and the branch router will both have default routes.
- **D. The corporate head office router will have a more specific static route and the branch office router will have a default route.**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From the official Nokia OSPF Routing Protocol Training Guide (Nokia document OSPF#SG#2024, Topic 1, Section 1.2 Static Routing Scenarios):

"In a hub#and#spoke static routing topology-such as a corporate head office with multiple subnets and a branch with a single WAN link-the head#office router is configured with precise static entries for each branch network, while the branch router is given a default static route pointing to the head#office router." This topology matches the described scenario:

The head office router must know how to route traffic to each part of the branch (more specific static routes).

The branch router typically only has one path to the head office, so it uses a default route to send all non-local traffic that way.

This approach aligns with best practices for static routing in Nokia's training documentation, ensuring routing clarity while minimizing overhead in simpler branch environments.

Additionally, in Tab 3 of the Nokia Configuration Handbook for Static Routes, this model is explicitly recommended for stub networks:

"Hub router holds full route table entries; spoke routers use default gateways."

NEW QUESTION # 102

Which of the following statements best describes the function of an OSPF Type 4 LSA?

- A. A Type 4 LSA is originated by an ABR that is connected to a stub area. The LSA is injected into the backbone area to provide routing information.
- **B. A Type 4 LSA is originated by an ABR to describe a route to an ASBR to routers outside the area.**

- C. A Type 4 LSA is originated by an ASBR to describe a route to itself to routers outside the area.
- D. A Type 4 LSA is originated by an ABR that is connected to a stub area. The LSA is injected into the stub area to provide routing information.

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From Nokia 7750 SR OS Routing Protocols Guide (OSPF ASBR Summary LSA):

Type 4 LSAs (ASBR Summary LSAs) are originated by ABRs.

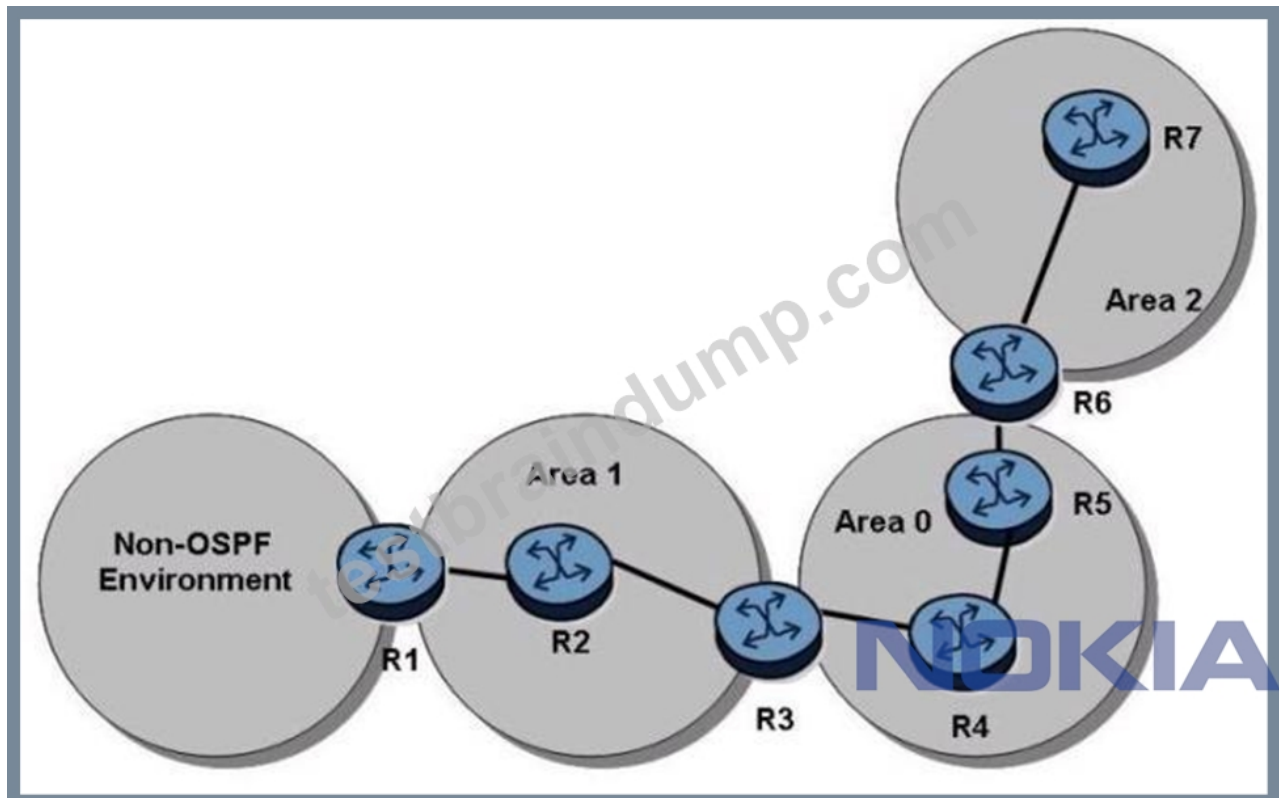

They inform routers in other areas about how to reach the ASBR (not about external prefixes, but about the ASBR's router ID).

Thus, correct answer: A.

-

NEW QUESTION # 103

Click the exhibit button.

In the topology shown, router R1 is an ASBR configured to export external routes to OSPF. Assuming that there are no stub networks, which of the following statements regarding Type 4 LSA generation is true?

- A. Router R3 generates a Type 4 LSA that is flooded to areas 0, 1, and 2.
- B. Router R3 generates a Type 4 LSA that is flooded to areas 0 and 2.
- **C. Router R3 generates a Type 4 LSA that is flooded to area 0, and router R6 generates a Type 4 LSA that is flooded to area 2.**
- D. Router R1 generates a Type 4 LSA that is flooded to areas 0, 1, and 2.

Answer: C

NEW QUESTION # 104

Which of the following is NOT a characteristic of RIPv1?

- A. 30 second network updates
- **B. Classless routing**
- C. Poison Reverse
- D. Broadcast advertisement

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From Nokia 7750 SR OS Routing Protocols Guide (RIP Version Differences):

RIPv1 is a classful routing protocol (does not support VLSM/CIDR).

RIPv2 adds classless routing support.

RIPv1 uses broadcast advertisements every 30 seconds (A and C are true).

RIPv1 uses Poison Reverse for loop prevention (D is true).

Thus, correct answer is B.

-
