

Salesforce Salesforce-MuleSoft-Associate최신덤프데모 - Salesforce-MuleSoft-Associate완벽한덤프자료

BONUS!!! Itcertkr Salesforce-MuleSoft-Associate 시험 문제집 전체 버전을 무료로 다운로드하세요:
<https://drive.google.com/open?id=1nomxxHcGWDSscNAordWaehRCIOQIgD3OW>

Salesforce Salesforce-MuleSoft-Associate인증시험은 현재IT인사들 중 아주 인기 있는 인증시험입니다.Salesforce Salesforce-MuleSoft-Associate시험패스는 여러분의 하시는 일과 생활에서 많은 도움을 줄뿐만 아니라 중요한 건 여러분의IT업계에서의 자기만의 자리를 지키실 수 있습니다.이렇게 좋은 시험이니 많은 분들이 응시하려고 합니다,하지만 패스율은 아주 낮습니다.

지금 사회에 능력자들은 아주 많습니다.it인재들도 더욱더 많아지고 있습니다.많은 it인사들은 모두 관련 it인증시험에 참가하여 자격증취득을 합니다.자기만의 자리를 확실히 지키고 더 높은 자리에 오르자면 필요한 스펙이니깐요.Salesforce-MuleSoft-Associate시험은Salesforce인증의 중요한 시험이고 또 많은 it인사들은Salesforce자격증을 취득하려고 노력하고 있습니다.

>> Salesforce Salesforce-MuleSoft-Associate최신 덤프데모 <<

Salesforce-MuleSoft-Associate완벽한 덤프자료, Salesforce-MuleSoft-Associate최신버전 시험덤프

Itcertkr는 고객님의 첫번째Salesforce Salesforce-MuleSoft-Associate시험에서 패스할수 있도록 최선을 다하고 있습니다. 만일 어떤 이유로 인해 고객이 첫 번째 시도에서 실패를 한다면, Itcertkr는 고객에게Salesforce Salesforce-MuleSoft-Associate덤프비용 전액을 환불 해드립니다.환불보상은 다음의 필수적인 정보들을 전제로 합니다.

최신 MuleSoft Associate Salesforce-MuleSoft-Associate 무료샘플문제 (Q12-Q17):

질문 # 12

A developer is examining the responses from a RESTful web service that is compliant with the Hypertext Transfer Protocol (HTTP/1.1) as defined by the Internet Engineering Task Force (IETF).

In this HTTP/1.1-compliant web service, which class of HTTP response status codes should be specified to indicate when client requests are successfully received, understood and accepted by the web service?

- A. 4xx
- B. 5xx
- C. 2xx
- D. 3xx

정답: C

설명:

In HTTP/1.1, response status codes are categorized to indicate the result of a client's request. Here's a detailed explanation of the

2xx class of HTTP response status codes:

2xx Success Codes:

Definition: The 2xx class of status codes indicates that the client's request was successfully received, understood, and accepted by the server.

Common Codes:

200 OK: The request has succeeded.

201 Created: The request has been fulfilled and resulted in a new resource being created.

202 Accepted: The request has been accepted for processing, but the processing is not complete.

204 No Content: The server successfully processed the request, but there is no content to return.

Importance:

Client Acknowledgment: These codes inform the client that their request was processed successfully, enabling appropriate client-side actions.

RESTful Standards: Adhering to these standards ensures consistent and predictable API behavior.

IETF RFC 7231: HTTP/1.1 Semantics and Content

HTTP Status Codes: HTTP Status Code Definitions

질문 # 13

Which Anypoint Platform component should a MuleSoft developer use to create an API specification prior to building the API implementation?

- A. API Designer
- B. Runtime Manager
- C. API Manager
- D. MUnit

정답: A

설명:

Creating an API specification before building the API implementation is a critical step in API development. MuleSoft's API Designer is the tool designed for this purpose. Here's a detailed explanation:

API Designer:

Purpose: API Designer is a web-based tool within Anypoint Platform that allows developers to design, document, and test APIs.

Features:

Specification Languages: Supports RAML and OAS (OpenAPI Specification) for defining APIs.

Interactive Editing: Provides a graphical and text-based interface to design API specifications interactively.

Mocking Service: Allows developers to create mock services to simulate API behavior before the actual implementation.

Process:

Define API: Use API Designer to create a detailed API specification, including endpoints, methods, request/response schemas, and security schemes.

Documentation: Automatically generate API documentation that can be shared with stakeholders.

Testing: Test the API design using the built-in mocking service to ensure it meets requirements.

MuleSoft Documentation: API Designer

API Design Best Practices: Designing APIs

질문 # 14

What is an advantage of using OAuth 2.0 client credentials and access tokens over only API keys for API authentication?

- A. If the client secret is compromised, the client credentials do not have to be reissued
- B. If the access token is compromised, the client credentials do not have to be reissued
- C. If the client ID is compromised it can be exchanged for an API key
- D. If the access token is compromised it can be exchanged for an API key

정답: B

설명:

OAuth 2.0 provides a more secure and flexible way of handling API authentication compared to API keys. Here's a detailed explanation of the advantage mentioned:

OAuth 2.0 Client Credentials Grant:

How It Works: In this flow, a client application uses its client ID and client secret to obtain an access token from the authorization

server.

Access Tokens: These tokens are short-lived and used to authenticate API requests.

Security Advantages:

Token Compromise: If an access token is compromised, it only grants limited access because it has a short lifespan and can be easily revoked.

Client Credentials: The client credentials (client ID and secret) are not exposed during API calls, reducing the risk of them being compromised.

Token Refresh: New tokens can be obtained without exposing the client credentials again.

Comparison with API Keys:

API Keys: If an API key is compromised, it often provides long-term access without expiration. Revoking the API key impacts all users or applications using it.

OAuth Tokens: Compromised tokens can be individually revoked without needing to change the client credentials, minimizing disruption.

OAuth 2.0 Framework: OAuth 2.0

MuleSoft Security Best Practices: API Security

질문 # 15

A high-volume eCommerce retailer receives thousands of orders per hour and requires notification of its order management warehouse, and billing systems for subsequent processing within 15 minutes of order submission through its website. Which integration technology, when used for its typical and intended purpose, meets the retailer's requirements for this use case?

- A. Enterprise Data Warehouse (EDW)
- B. Extract Transform Load (ETL)
- C. Publish/Subscribe Messaging Bus (Pub/Sub)
- D. Managed File Transfer (MFT)

정답: C

설명:

For a high-volume eCommerce retailer requiring real-time or near-real-time notifications to multiple systems, a Publish/Subscribe Messaging Bus is an ideal choice. Here's a detailed explanation:

Publish/Subscribe Model:

Definition: The Pub/Sub messaging model allows messages to be sent (published) by producers and received (subscribed to) by multiple consumers.

Asynchronous Communication: It decouples the sender and receiver, enabling asynchronous communication.

Use Case Fit:

Real-Time Processing: Suitable for scenarios requiring real-time or near-real-time data processing and notification.

Scalability: Handles high volumes of messages efficiently, making it suitable for environments with thousands of transactions per hour.

Implementation:

Message Broker: A message broker (e.g., Apache Kafka, RabbitMQ) can manage the distribution of messages to the order management, warehouse, and billing systems.

Guaranteed Delivery: Ensures that messages are reliably delivered to all subscribed systems within the required time frame.

Pub/Sub Messaging: Understanding Publish/Subscribe Messaging

High-Volume Data Processing: Apache Kafka Use Cases

질문 # 16

Which productivity advantage does Anypoint Platform have to both implement and manage an API?

- A. Automatic API specification generation
- B. Automatic API semantic versioning
- C. Automatic API proxy generation
- D. Automatic API governance

정답: C

설명:

Anypoint Platform, MuleSoft's unified platform for API design and integration, offers several productivity advantages for both implementing and managing APIs. Among these features, automatic API proxy generation is particularly beneficial. Here's a step-by-step explanation:

API Implementation:

Design Center: In the Design Center, users can create API specifications using RAML or OAS. This environment provides tools to design and document APIs effectively.

Exchange: After defining the API, it can be published to Anypoint Exchange where it can be shared and discovered by others within the organization.

Automatic API Proxy Generation:

When an API is published to Exchange, Anypoint Platform allows for the automatic creation of an API proxy. An API proxy acts as a facade for your backend API, providing a layer of abstraction and security.

Advantages:

Security: Protects backend services by exposing only necessary endpoints and handling authentication, authorization, and rate limiting.

Traffic Management: Helps in managing traffic through throttling and caching.

Monitoring: Facilitates monitoring and logging to track API usage and performance.

This automation saves time and reduces the complexity of manual proxy setup, allowing developers to focus on core business logic.

API Management:

API Manager: Provides a dashboard to manage API policies, versions, and SLA tiers. Users can apply security policies, monitor traffic, and analyze API usage.

Monitoring: Integrated with Anypoint Monitoring, users get insights into API performance and health, enabling proactive management.

MuleSoft Documentation: API Proxies

MuleSoft Anypoint Platform Overview: Anypoint Platform

질문 # 17
