The UiPath (ADPv1) Automation Developer Professional (UiPath-ADPv1) certification is a valuable credential that assists you to enhance your existing skills and experience. By doing this you can stay updated and competitive in the market and achieve your career objectives in a short time period. To do this you just need to pass the one UiPath (ADPv1) Automation Developer Professional exam. Are you ready for this? If yes then enroll in UiPath UiPath-ADPv1 Exam Dumps and start this journey with Test4Engine. The Test4Engine offers real, valid, and updated UiPath-ADPv1 Questions that surely will help you in exam preparation and enable you to pass the challenging UiPath-ADPv1 exam with flying colors.

Since our UiPath-ADPv1 study guide have veried versions which contain the PDF, Softwate and APP online, you can study whenever you are or even offline state according to their different merits. In addition, Our UiPath-ADPv1 training quiz will be very useful for you to improve your learning efficiency, because you can make full use of your all spare time to do test. It will bring a lot of benefits for you beyond your imagination if you buy our UiPath-ADPv1 Study Materials.

UiPath-ADPv1 Reliable Exam Answers & New UiPath-ADPv1 Test Voucher

We have confidence and ability to make you get large returns but just need input small investment. our UiPath-ADPv1 study materials provide a platform which help you gain knowledge in order to let you outstanding in the labor market and get satisfying job that you like. The content of our UiPath-ADPv1 question torrent is easy to master and simplify the important information. It conveys more important information with less answers and questions, thus the learning is easy and efficient. We believe our latest UiPath-ADPv1 exam torrent will be the best choice for you.

UiPath (ADPv1) Automation Developer Professional Sample Questions (Q74-Q79):

NEW QUESTION # 74

Which of the options below is not an action in Test Explorer?

- A. Run Selected
- B. Run Failed Test Cases

- **C. Run Passed Test Cases**
- D. Run All In View

Answer: C

Explanation:

The Test Explorer panel in UiPath Studio shows information relevant to test automation, such as test cases, test results, and activity coverage¹. You can use the Test Explorer toolbar to filter test results based on result state, and to run or debug test cases using various options¹. According to the UiPath documentation¹², the available actions in Test Explorer are:

Refresh: Refresh the information shown in the Test Results panel.

Clear execution results: Clear all execution results shown in the Test Explorer Panel.

Run All in View: Run tests that are currently in view through all filters.

Run All: Run all test cases and workflows.

Run Selected: Run only selected test cases and workflows.

Run Failed Test Cases: Run only failed test cases.

Debug Selected: Debug only selected test cases and workflows.

Debug Failed Test Cases: Debug only failed test cases.

Repeat Last Test Run: Run the latest test.

Passed Test Cases: Show only test cases that have passed.

Failed Test Cases: Show only test cases that have failed.

Not Executed Test Cases: Show only test cases that have not been executed.

Filter by Covered/Uncovered Activities: Choose whether to show in the Designer panel the activities that have been covered during the execution.

Filter by Test Cases/Workflows: Choose what to show in the Test Explorer panel.

Search Tests: Use the search function to look for test case names.

As you can see, there is no action called Run Passed Test Cases in Test Explorer, so this is the correct answer to the question.

NEW QUESTION # 75

An error occurs during the Initialization state within the 'FrameworkMnItAllSettings.xaml' file for a process using REFramework which is executed on Orchestrator. The project contains default values for the settings specified in "Config.xlsx".

What is the current state of the job in Orchestrator?

- A. Suspended
- **B. Faulted**
- C. Stopped
- D. Successful

Answer: B

Explanation:

The current state of the job in Orchestrator is Faulted, because an error occurred during the Initialization state of the process using REFramework. The REFramework is a template for creating robust and scalable automation projects that uses the State Machine workflow type¹. The Initialization state is the first state in the REFramework, which is responsible for initializing the application, reading the configuration file, and setting the log level². If an error occurs during the Initialization state, the process will go to the End Process state, which will perform the final actions and close the application². The End Process state will also mark the job as Faulted in Orchestrator, if the value of the ShouldMarkJobAsFaulted argument is True². The default value of this argument in the REFramework is True, unless it is changed in the Config.xlsx file or in the Orchestrator assets³.

Option A is incorrect, because the job is not Successful, as an error occurred during the Initialization state.

Option C is incorrect, because the job is not Suspended, as the process did not pause or wait for any user input.

Option D is incorrect, because the job is not Stopped, as the process did not encounter any user intervention or manual termination.

References: 1: State Machine 2: The UiPath ReFramework 3: ShouldMarkJobAsFaulted Argument

NEW QUESTION # 76

Which of the following is a tag in a selector?

- A. class-down-chevron set-font'
- B. <html app-msedge.exe' title=Find Unicorn Name' />
- C. id='selMonth'
- D. aaname='FirstName'

Answer: B

Explanation:

A tag in a selector is a node that represents a UI element or a container of UI elements. A tag has the following format: <ui_system attr_name_1='attr_value_1' ... attr_name_N='attr_value_N'>. A tag can have one or more attributes that help identify the UI element uniquely and reliably¹. For example, the tag <html app-msedge.exe' title=Find Unicorn Name' /> represents the HTML document of a web page opened in Microsoft Edge browser, with the title 'Find Unicorn Name'. The attributes app-msedge.exe and title=Find Unicorn Name help distinguish this tag from other HTML documents.

The other options are not tags, but attributes. An attribute is a property of a UI element that has a name and a value. For example, id='selMonth' is an attribute that indicates the ID of a UI element is "selMonth". Attributes are used inside tags to specify the UI element or container¹.

NEW QUESTION # 77

What is the correct method to check how many resources are utilized in a personal workspace in UiPath Orchestrator?

- A. Navigate to Tenant > Users, click the Personal Workspaces tab, and then click Resources for the desired workspace.
- B. **Navigate to Tenant > Folders, click the Personal Workspaces tab, and then click Manage Resources for the desired workspace.**
- C. Navigate to Tenant > Folders, click the All Workspaces tab, and then click Check Resources for the desired workspace.
- D. Navigate to Tenant > Folders, click the Personal Workspaces tab, and then click See Usage for the desired workspace.

Answer: B

Explanation:

This is the correct method to check how many resources are utilized in a personal workspace in UiPath Orchestrator. You can see the number of runtimes, licenses, and storage used by the workspace, as well as the available quota for each resource type. You can also adjust the quota allocation for the workspace if needed.

For more information, please refer to Managing Personal Workspaces in the UiPath Documentation Portal.

NEW QUESTION # 78

Considering that the attached table is stored in a variable called "dt":

□ Which LINQ query can be used to return the maximum total Quantity?

- A. dt.AsEnumerable. Max(Function(x) Convert.ToInt32(x("Quantity").ToString))
- B. dt.AsEnumerable. OrderByDescending(Function(x) Convert.ToInt32(x("Quantity").ToString)).First.Item("Quantity")
- C. dt.AsEnumerable. Max(Function(x) Convert.ToInt32(x("Quantity").ToString))("Item")
- D. **dt.AsEnumerable. GroupBy(Function(x) x("Item").ToString). Max(Function(x) x.Sum(Function(y) Convert.ToInt32(y("Quantity").ToString)))**

Answer: D

Explanation:

The LINQ query that can be used to return the maximum total Quantity from the attached table is dt.AsEnumerable. GroupBy(Function(x) x("Item").ToString). Max(Function(x) x.Sum(Function(y) Convert.ToInt32(y("Quantity").ToString))). This query uses the LINQ methods AsEnumerable, GroupBy, Max, and Sum to manipulate the data in the dt variable. The dt variable is a DataTable that contains the following data:

No.

Item

Quantity

1

apple

10

```
2
orange
20
3
mango
50
4
kiwi
80
5
pear
1
6
apple
5
7
mango
15
```

The `AsEnumerable` method converts the `DataTable` into an `Enumerable` collection of `DataRow` objects. The `GroupBy` method groups the elements of the collection by the value of the `Item` column, creating a collection of groups. Each group has a key, which is the `Item` name, and a list of elements, which are the `DataRow`s that have the same `Item` value. The `Max` method returns the maximum value of the collection, based on a selector function. The selector function is a lambda expression that calculates the sum of the `Quantity` column for each group. The `Sum` method returns the sum of the elements in a collection, based on a selector function. The selector function is a lambda expression that converts the value of the `Quantity` column into an integer.

Therefore, the query will group the `DataRow`s by the `Item` name, calculate the total `Quantity` for each group, and return the maximum total `Quantity` among the groups. The maximum total `Quantity` is 80, which corresponds to the group with the key "kiwi".
