

# TDA-C01시험준비 - TDA-C01최신업데이트공부자료

2026 Itcertkr 최신 TDA-C01 PDF 버전 시험 문제집과 TDA-C01 시험 문제 및 답변 무료 공유:

<https://drive.google.com/open?id=1CCzWRs2tkaVCEgfVoX6vA2r-wpmyroPZ>

Itcertkr의Tableau인증 TDA-C01덤프의 인지도는 아주 높습니다. 인지도 높은 원인은Tableau인증 TDA-C01덤프의 시험적중율이 높고 가격이 친근하고 구매후 서비스가 끝내주기 때문입니다. Itcertkr의Tableau인증 TDA-C01덤프로 Tableau인증 TDA-C01시험에 도전해보세요.

Tableau TDA-C01 인증 시험을 응시하려면, 후보자는 데이터 분석 및 시각화 개념에 대한 기본적인 이해력이 있어야 합니다. 또한 Tableau Desktop 경험이 있어야 하며 최소한 두 개의 Tableau 프로젝트에서 작업한 경험이 있어야 합니다. 이 인증 시험은 여러 언어로 제공되어 전 세계의 후보자들이 접근할 수 있습니다.

## TDA-C01최신 업데이트 공부자료 & TDA-C01최신버전 덤프공부자료

Tableau TDA-C01 시험이 어렵다고해도 Itcertkr의 Tableau TDA-C01시험잡이 덤프가 있는한 아무리 어려운 시험이라도 쉬워집니다. 어려운 시험이라 막무가내로 시험준비하지 마시고 문항수도 적고 모든 시험문제를 커버할수 있는 Tableau TDA-C01자료로 대비하세요. 가장 적은 투자로 가장 큰 득을 보실수 있습니다.

Tableau TDA-C01 시험 준비에는 실제 경험과 이론적 지식의 조합이 필요합니다. Tableau는 온라인 교육 과정, 모의 시험 및 학습 자료와 같은 다양한 자원을 제공하여 시험 준비를 돕고 있습니다. 시험은 어렵지만 적절한 준비와 헌신으로 TDA-C01 시험에 합격할 수 있습니다.

## 최신 Tableau Certified TDA-C01 무료샘플문제 (Q89-Q94):

질문 # 89

You have the following visualization.

The Last() calculation is set to compute using Table (across)

Which value will appear in the crosstab for the Consumer segment of the year 2018 if you change compute to use Order Date?

- A. 0
- B. 1
- C. 2
- D. 3

**정답: A**

**설명:**

The LAST() function in Tableau returns the number of rows from the current row to the last row in the partition. When you compute using 'Order Date', it will change the partitioning of the calculation. If

'Consumer' in '2018' is the last row in its partition when computed by 'Order Date', then LAST() will return 0 for that cell.

The LAST() function in Tableau is a table calculation that returns the number of rows from the current row to the last row in the partition. The value of LAST() is 0 for the last row, increases by 1 for each row above the last row, and can be negative for rows below the current row if there are such rows in the partition.

In the provided visualization, LAST() is set to compute using Table (across). Changing the compute mode to use "Order Date" will adjust the partitioning of the data upon which the LAST() function is calculated. Since

"Order Date" is likely to be a unique value per row (assuming each order has a unique date), each row becomes its own partition.

For the Consumer segment of the year 2018, if "Order Date" is unique for each row, then the last row in each partition (in this case, each individual row) will have a LAST() value of 0 because there are no other rows in the partition - it's the last row of its own partition.

Therefore, when you change the compute mode of LAST() to use "Order Date", each cell under the Consumer segment for the year 2018 will have the LAST() value of 0, because each order date creates a partition of one, making every row the last in its partition.

#### **질문 # 90**

You plan to create a visualization that has a dual axis chart. The dual axis chart will contain a shape chart and a line chart will use the same measure named Population on the axis.

You need to configure the shapes to be much larger than the line.

What should you do?

- A. For the second axis select Shape on the Marks card From Select Shape Palette select Custom and then select Reset
- B. Create a custom shape that is larger than the default shape and add the shape to the Shapes folder in My Repository
- C. Duplicate Population Drag the duplicate to the second Marks card and configure the size of the marks independently
- D. Change Population to a discrete dimension

**정답: C**

#### **질문 # 91**

You have the following box plot that shows the distribution of average profits made in every state by region.

Which region has the smallest distribution of profits?

- A. South
- B. Cast
- C. West
- D. Central

정답: A

설명:

The box plot visualization displays the distribution of average profits by region. The distribution of profits is represented by the range of the box (interquartile range) and the whiskers (which often represent the total range excluding outliers). From the image provided, the South region has the smallest visible range within its box and the shortest whiskers, indicating the smallest distribution of average profits among the choices provided.

### 질문 # 92

You have the following dataset:

| Name            |
|-----------------|
| Charles Sheldon |
| charles,sheldon |
| Sheldon charles |
| Charles.Sheldon |
| Charles_Sheldon |

Which grouping option should you use in Tableau Prep to group all five names automatically?

- A. Manual Selection
- B. Pronunciation
- C. Spelling
- **D. Common Characters**

정답: D

설명:

Common Characters: Find and group values that have letters or numbers in common. This option uses the ngram fingerprint algorithm that indexes words by their unique characters after removing punctuation, duplicates, and whitespace. This algorithm works for any supported language. This option isn't available for data roles. For example, this algorithm would match names that are represented as "John Smith" and "Smith, John" because they both generate the key "hijmno". Since this algorithm doesn't consider pronunciation, the value "Tom Jhinois" would have the same key "hijmno" and would also be included in the group.

### 질문 # 93

You connect to a database server by using Tableau Prep. The database server has a data role named Role1.

You have the following field in the data.

You need to apply the Role1 data role to the Material field.

Which two actions should you perform? Choose two.

- **A. From the More actions menu of Materials, select Group Values, and then select Spelling.**
- **B. For the data type of the Material field, select Custom, and then select Role1.**
- C. From the More actions menu of Materials, filter the selected values.
- D. From the More actions menu of Materials, select Valid in the Show values section.

정답: A,B

설명:

To apply a custom data role to a field, you need to select the data type of the field and then choose the data role from the list of available roles. This will validate the values in the field against the data role and mark any invalid values with a red exclamation mark. To fix the invalid values, you can use the Group Values option and select the Spelling algorithm, which will group values that are close in spelling and replace them with the most frequent value in the group. This will help you standardize the values in the Material field and match them with the Role1 data role. References: The information is based on the following sources:

\* Use Data Roles to Validate your Data - Tableau

\* New in Tableau Prep: Automatically identify data quality issues with Data Roles
