使いやすいPL-600最新な問題集: Microsoft Power Platform Solution Architectみんながお進めるPL-600問題トレーニング

Fast2testは優れたIT情報のソースを提供するサイトです。Fast2testで、あなたの試験のためのテクニックと勉強資料を見つけることができます。Fast2testのMicrosoftのPL-600試験トレーニング資料は豊富な知識と経験を持っているIT専門家に研究された成果で、正確度がとても高いです。Fast2testに会ったら、最高のトレーニング資料を見つけました。Fast2testのMicrosoftのPL-600試験トレーニング資料を持っていたら、試験に対する充分の準備がありますから、安心して利用してください。

Microsoft Power Platform Solution Architect 認定 PL-600 試験問題 (Q185-Q190):

質問 # 185

A company offers continuing education courses for medical professionals. Each time a course is offered, the company tracks that the session has taken place in an Excel workbook.

The company maintains a list of required qualifications for an educator to teach a course. Educator qualifications range from languages spoken to advanced degrees.

The company needs the following custom table relationships defined:

Associate educators with a list of their professional qualifications.

Assign a primary educator to each course that is held.

Collect information about every course that is held.

You need to determine the type of relationship that best fits the requirement.

Which type of table relationship should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement  Relationship

Requirement	Relationship
Educators must be associated with their qualifications.	<ul style="list-style-type: none"> Many-to-many relationship that uses a system generated table Many-to-many relationship that uses a custom table One-to-many relationship
When a course is held there must be a primary educator assigned.	<ul style="list-style-type: none"> Many-to-many relationship that uses a system generated table Many-to-many relationship that uses a custom table One-to-many relationship
When a course is held, the company needs to collect information on that session.	<ul style="list-style-type: none"> Many-to-many relationship that uses a system generated table Many-to-many relationship that uses a custom table One-to-many relationship

正解:

解説:

Requirement	Relationship
Educators must be associated with their qualifications.	<ul style="list-style-type: none"> Many-to-many relationship that uses a system generated table Many-to-many relationship that uses a custom table One-to-many relationship
When a course is held there must be a primary educator assigned.	<ul style="list-style-type: none"> Many-to-many relationship that uses a system generated table Many-to-many relationship that uses a custom table One-to-many relationship
When a course is held, the company needs to collect information on that session.	<ul style="list-style-type: none"> Many-to-many relationship that uses a system generated table Many-to-many relationship that uses a custom table One-to-many relationship

Reference:

Box 1: One-to-many relationship

Each educator can have 0, 1, or many qualifications

Box 2: One-to-many relationship

Each educator can be the primary educator for 0, 1 or many courses.

Box 3: Many-to-many relationship that uses a custom table.

Note: N:N (Many-to-Many): A table relationship that depends on a special Relationship table, sometimes called an Intersect table, so that many rows of one table can be related to many rows of another table.

質問 # 186

Drag and Drop Question

An organization plans to replace large, legacy systems with apps in Microsoft Power Platform.

The technical staff consolidated the legacy data into a Microsoft SQL Server database and provisioned a Microsoft Power Platform environment for prototyping new processes. The business decision makers approved the SQL data and the prototype data that must be migrated into production.

The following types of data exist:

- Historical data: read-only legacy data to be used for future reference

- Prototype data: created to support new business processes

You need to deploy the approved data into the Microsoft Dataverse production environment and keep the remaining data in SQL Server.

Which method should you use for each type of data?

To answer, drag the appropriate tools to the correct migrations. Each tool may be used once, more than once, or not at all. You

may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

The screenshot shows a Microsoft interface with two main panes. On the left is the 'Tools' pane, which contains four items: 'Dataflows', 'Virtual tables', 'Package Deployer', and 'SolutionPackager'. On the right is the 'Answer Area', which contains a 'Migration' section with two sub-items: 'Historical data' and 'Prototype data'. Below the 'Migration' section is a 'Tool' section with two empty input boxes.

正解:

解説:

The screenshot shows the same Microsoft interface as above, but with the correct answers selected. In the 'Tools' pane, 'Package Deployer' and 'SolutionPackager' are selected. In the 'Answer Area', 'Virtual tables' is selected under 'Migration', and 'Dataflows' is selected under 'Tool'.

質問 # 187

Case Study 3 - Fabrikam, inc.

Background

Fabrikam, Inc. manufactures industrial metal cutting machines. The company installs and services the machines for customers. Fabrikam has manufacturing plants in Canada, France, and China. The company also has regional service organizations that are responsible for installation and maintenance of the machines.

Current environment

Overview

Operations for the company are managed very informally. Only a small number of long-term employees are aware of all manufacturing processes. The company has been experiencing quality issues associated with its manufacturing operations and installations.

The company wants to implement a way to capture quality inspection results for each machine produced. Current inspection checklists are stored in the Files section of a Teams channel for inspectors. Inspectors commonly print the incorrect inspection checklist.

The company has specific inspection stations for certain inspection steps. Each station has the gauges and equipment required for related inspection steps. There is often a backlog at specific inspection stations. This results in delays in shipping machines to customers.

Accounting system

The current system does not handle shop floor or manufacturing planning functionality.

Machines are assigned serial numbers and placed in stock until they are shipped to customers.

Employee information is maintained only within the accounting system. Access to the information is strictly controlled due to privacy regulations and company policies.

Other systems

The company has an enterprise Microsoft 365 subscription. The company uses Microsoft 365 only for sending and receiving email. The company uses photos of employees to generate employee badges. Photos are uploaded into Microsoft 365 user profiles. The company recently started using Dynamics 365 Field Service to manage and maintain the machines that it installs for its customers. The app has not been customized.

The company has added roles, skills, and certification proficiencies to Dynamics 365 Field Service resources to support both customer onsite inspections and final manufacturing inspections.

Requirements

Quality inspection app

Fabrikam is evaluating Microsoft Power Platform to determine whether it can meet the company's requirements for a manufacturing defect and quality inspection solution. Each machine produced must be subjected to a quality inspection at various points during production. Each machine must undergo a more extensive quality inspection before the machine can be shipped to the customer.

Inspection orders

Inspection orders must:

- Allow entry of quality ratings of passed or failed for each quality metric identified for the machine being rated.
- Include information about the person who performed each inspection step and any comments made by the inspector.
- Be automatically marked as failed if one inspection step rating is marked as failed.
- Be automatically marked for re-inspection should a machine fail inspection. The new inspection order must be created by using the originating inspection order as a template.

Inspectors must fill in findings comments and upload at least one photo for any inspection step that is marked as failed.

Inspection standardization

Standardized checklists must be stored in the solution for use by inspectors. A copy must be created when a new inspection is initiated. The solution must:

Prevent an inspector from proceeding to the next step of the checklist until required information for a step is entered.

Support the addition of steps to inspections to support custom features added to a machine for a customer.

Support the direct input of measurements from testing gauges to avoid incorrect readings being entered by inspectors.

Provide a visual representation of the testing measurement limits for each step. Include an indication of how the measured value compares to measurement limits and whether the measurement is within tolerance. Users must be able to configure the visualizations to display the minimum value and maximum value, and whether the reading is within the tolerance of a single targeted value. It must also be able to be used for maintenance inspections once the machine has been installed.

Support the ability to store photo references within each inspection step to document defects found during inspections.

Security

Users must be active employees of Fabrikam

When a user signs into the inspection solution, the solution must display a picture of the employee who has signed in.

Supervisors must be able to modify standard checklists. Other employees must be prevented from modifying checklists.

You must prevent users from changing inspection order data once an inspection is marked as final.

Analytics and reporting

The solution must:

Provide metrics including existing and upcoming demand by inspection station, average time spent per user at a station, and average time a machine spends at each inspection point.

Provide metrics per inspector including number of inspections performed by month, and number of inspections per rating type (pass, fail).

Provide a printed quality certificate to be included with each machine.

Issues

During initial testing of the solution, testers report that they cannot see the photos taken during a previously failed inspection.

Hotspot Question

You need to recommend components to meet the re-inspection requirements.

Which components should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Requirement

Component

Initiate the creation of re-inspection orders.

	▼
Dataflow	
Business rule	
Power Automate flow	

Automatically set overall inspection ratings based on the checklist ratings.

	▼
From event	
Business rule	
Custom action	
Rollup data type	

正解:

解説:

Answer Area

Requirement

Component

Initiate the creation of re-inspection orders.

	▼
Dataflow	
Business rule	
Power Automate flow	

Automatically set overall inspection ratings based on the checklist ratings.

	▼
From event	
Business rule	
Custom action	
Rollup data type	

Explanation:

Box 1: Power Automate flow

Scenario: Inspection orders must be automatically marked for re-inspection should a machine fail inspection. The new inspection order must be created by using the originating inspection order as a template.

Box 2: Business rule

By combining conditions and actions, you can do any of the following with business rules:

Set column values

Clear column values

Set column requirement levels

Show or hide columns

Enable or disable columns

Validate data and show error messages

Create business recommendations based on business intelligence.

質問 # 188

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company plans to automate the expense approval process.

Users currently enter data into an on-premises SQL Server database.

You need to allow users to submit expenses from mobile devices.

Solution: Create a canvas app for expense data entry. Create a desktop flow. Create a cloud flow for approval and trigger the desktop flow to add data to the SQL Server database.

Does the solution meet the goal?

- A. Yes
- B. No

正解: B

質問 # 189

You need to recommend a solution for integrating luggage information.

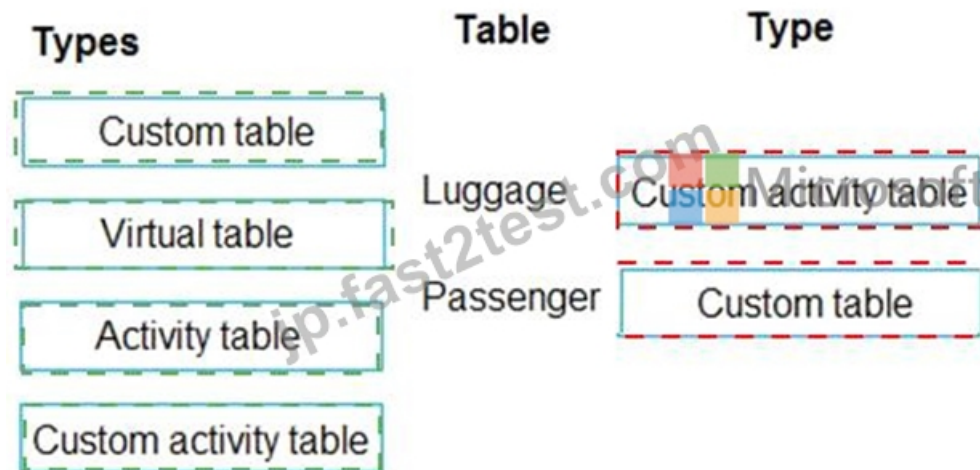

What should you recommend? To answer, drag the appropriate types to the correct tables. Each type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

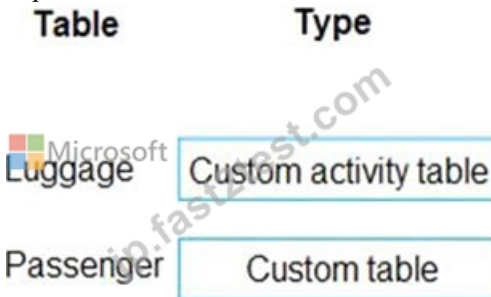

Types	Table	Type
Custom table	Luggage	
Virtual table	Passenger	
Activity table		
Custom activity table		

正解:

解説:

Explanation

Luggage: Custom activity table

An activity can be thought of as any action for which an entry can be made on a calendar. An activity has time dimensions (start time, stop time, due date, and duration) that help determine when the action occurred or will occur. Activities also contain data that helps determine what action the activity represents, for example, subject and description.

Passenger: Customer table

The account and contact tables in Microsoft Dataverse are essential for identifying and managing customers, selling products and services, and providing superior service to the customers. A customer address table is used to store address and shipping information for a customer.

Scenario: The company has a custom app for managing and tracking passenger luggage. The app uses Microsoft Dataverse.

Agents need to view which pieces of luggage match to each passenger, and then need to add the total on the passenger record.

質問 # 190

.....

労働市場での激しい競争により、多くの学生、労働者などを含む多くの人々が、短時間でPL-600認定を取得するために最善を尽くす傾向にあります。彼らは皆、現在の状態を変更できる機会があるという有用な認証を所有することを望んでいますが、PL-600認定を短時間で取得することは容易ではないことも理解しています。あなたがPL-600試験に合格して証明書を取得したい人の場合は、素晴らしいPL-600学習ガイドで問題の解決をお手伝いします。
