Additionally, the SAFe-POPM Exam takers can benefit themselves by using our testing engine and get numerous real SAFe-POPM exam like practice questions and answers. They will help them revising the entire syllabus within no time.

### Scrum SAFe Product Owner/Product Manager POPM (6.0) Sample Questions (Q24-Q29):

#### NEW QUESTION # 24

What is one benefit of capacity allocation?

- A. It prevents different types of backlog items from being compared against each another
- B. It enables effective time-tracking
- C. It ensures all Value Streams in the Portfolio are appropriately funded
- D. It allocates developers and testers to an initiative

**Answer: A**

Explanation:

Capacity allocation is an allocation of work by work item type for an upcoming planning period<sup>1</sup>. It helps the Agile Teams to balance their investments across different types of backlog items, such as new features, enablers, defects, and technical debt<sup>2</sup>. One benefit of capacity allocation is that it prevents different types of backlog items from being compared against each other based on their relative value or priority, which can be misleading or subjective<sup>3</sup>. Instead, capacity allocation allows the teams to focus on delivering value and quality in each work item type, without compromising the other<sup>2</sup>.

#### NEW QUESTION # 25

What is one method to establish a team's velocity?

- A. Compare the average Story points completed throughout the previous Iterations
- B. Calculate the percentage planned versus actual Stories completed during an Iteration
- C. Add the Story points for all the Stories planned for the Iteration
- D. Add the Story points for all Features completed in the Iteration

**Answer: A**

Explanation:

Explanation

One method to establish a team's velocity is to compare the average story points completed throughout the previous iterations. This

gives an indication of how much work the team can realistically deliver in a given time frame, based on their past performance. To calculate the team's velocity, you can use the following formula:  $\text{Team velocity} = \text{total story points completed} / \text{number of iterations}$ . You can also use various charts and tools to visualize the team's velocity and track its progress over time<sup>1234</sup> References:

### NEW QUESTION # 26

What is one tool that visualizes Features representing a workflow?

- A. User Experience Design
- B. Team Kanban
- C. Continuous Delivery Pipeline
- D. Story Maps

**Answer: D**

Explanation:

Explanation

A story map is a tool that visualizes features representing a workflow. A story map is a two-dimensional arrangement of user stories that shows the relationship between the user activities and the features that support them<sup>1</sup>. A story map helps the team to understand the user journey, prioritize the features based on value and dependencies, and plan the releases and iterations<sup>2</sup>.

### NEW QUESTION # 27

Why is it important to establish a definition of done?

- A. To create alignment on when Stories are complete
- B. To create standardized work between all Agile Teams
- C. To ensure Features provide the expected business benefits
- D. To enable Scrum Masters/Team Coaches to enforce quality

**Answer: A**

### NEW QUESTION # 28

What helps visualize work during PI Planning?

- A. ART Planning Board
- B. ART PI Risks
- C. ART PI Kanban Board
- D. ART PI Objectives

**Answer: A**

Explanation:

The ART Planning Board is a physical or virtual board that helps visualize the work of the Agile Release Train (ART) during PI Planning. It shows the features and dependencies for each team and iteration in the Program Increment (PI)<sup>1</sup>. The ART Planning Board helps the teams and stakeholders to see the big picture, identify and resolve issues, and collaborate on the delivery plan<sup>2</sup>.
