

Latest 350-901 Exam Simulator | 350-901 Pdf Version

P.S. Free 2026 Cisco 350-901 dumps are available on Google Drive shared by VerifiedDumps: <https://drive.google.com/open?id=1B16llQybhjYGYkU8Vuv7JVgxvVSwlDOW>

There are many ways to help you pass Cisco certification 350-901 exam and selecting a good pathway is a good protection. VerifiedDumps can provide you a good training tool and high-quality reference information for you to participate in the Cisco certification 350-901 exam. VerifiedDumps's practice questions and answers are based on the research of Cisco certification 350-901 examination Outline. Therefore, the high quality and high authoritative information provided by VerifiedDumps can definitely do our best to help you pass Cisco certification 350-901 exam. VerifiedDumps will continue to update the information about Cisco certification 350-901 exam to meet your need.

Cisco 350-901 Exam consists of 60-70 questions and has a time limit of 90 minutes. 350-901 exam is available in English and Japanese and can be taken at any Pearson VUE testing center worldwide. To prepare for the exam, Cisco offers a range of training courses and study materials, including instructor-led courses, e-learning courses, and study guides. Additionally, Cisco's DevNet community provides developers with access to a range of resources and tools to help them prepare for the exam.

Smashing 350-901 Guide Materials: Developing Applications using Cisco Core Platforms and APIs (DEVCOR) Deliver You Unique Exam Brainsdumps - VerifiedDumps

Our 350-901 study materials are full of useful knowledge, which can meet your requirements of improvement. Also, it just takes about twenty to thirty hours for you to do exercises of the Cisco 350-901 Study Guide. The learning time is short but efficient. You will elevate your ability in the shortest time with the help of our Cisco 350-901 preparation questions.

To prepare for the Cisco 350-901 exam, candidates should familiarize themselves with the exam objectives and study materials provided by Cisco. These materials include online courses, books, and practice exams. Candidates should also gain hands-on experience with Cisco's technologies and APIs by building and testing applications. By combining study and practical experience, candidates can increase their chances of passing the exam and earning the Cisco 350-901 Certification.

Description

The addNetworkObject operation handles configuration related to [NetworkObject](#) model. This API call is not allowed on the standby unit in an HA pair.

HTTP request

URL

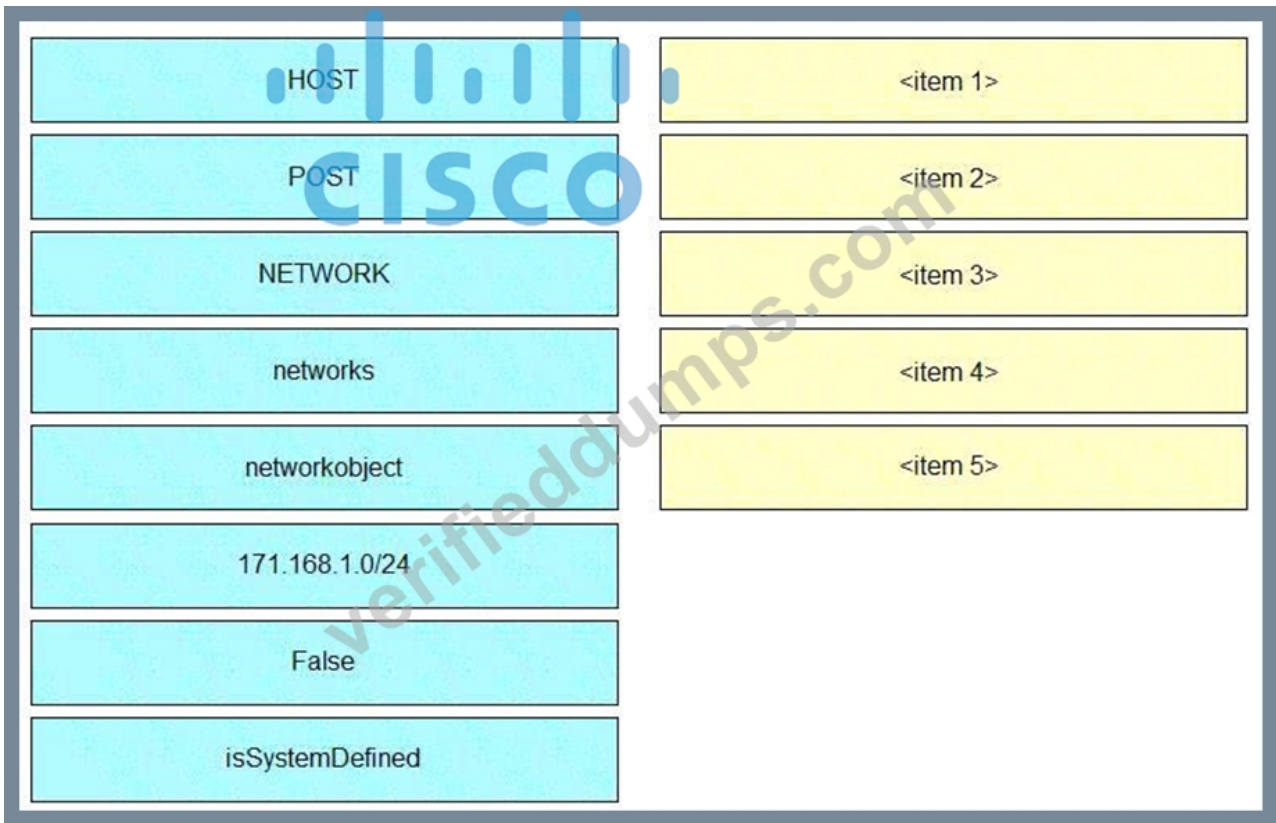

```
POST /api/fdm/v4/object/networks
```

Data Parameters

Parameter	Required	Type	Description
name	True	string	A string that is the name of the network object.
description	False	string	A string containing the description information. Field level constraints: length must be between 0 and 200 (inclusive). (Note: Additional constraints might exist)
subType	True	string	An enum value that specifies the network object type. HOST - A host type. NETWORK - A network type. FQDN - A FQDN type. RANGE - A range type. Field level constraints: cannot be null. (Note: Additional constraints might exist)
value	True	string	A string that defines the address content for the object. For HOST objects, this is a single IPv4 or IPv6 address without netmask or prefix. For NETWORK objects, this is an IPv4 or IPv6 network address with netmask (in CIDR notation) or prefix. For FQDN objects, this is a Fully qualified domain name. For RANGE objects, this is IPv4 or IPv6 addresses separated by '-'. Field level constraints: cannot be null, must match pattern ^((?!:).)*\$ (Note: Additional constraints might exist)
isSystemDefined	False	boolean	A Boolean value. TRUE or FALSE(the default). The TRUE value indicated that this Network object is a system defined object.
dnsResolution	False	string	DNS Resolution type can be IPV4_ONLY, IPV6_ONLY or IPV4_AND_IPV6.
type	True	string	A UTF8 string, all letters lower-case, that represents the class-type. This corresponds to the class name.

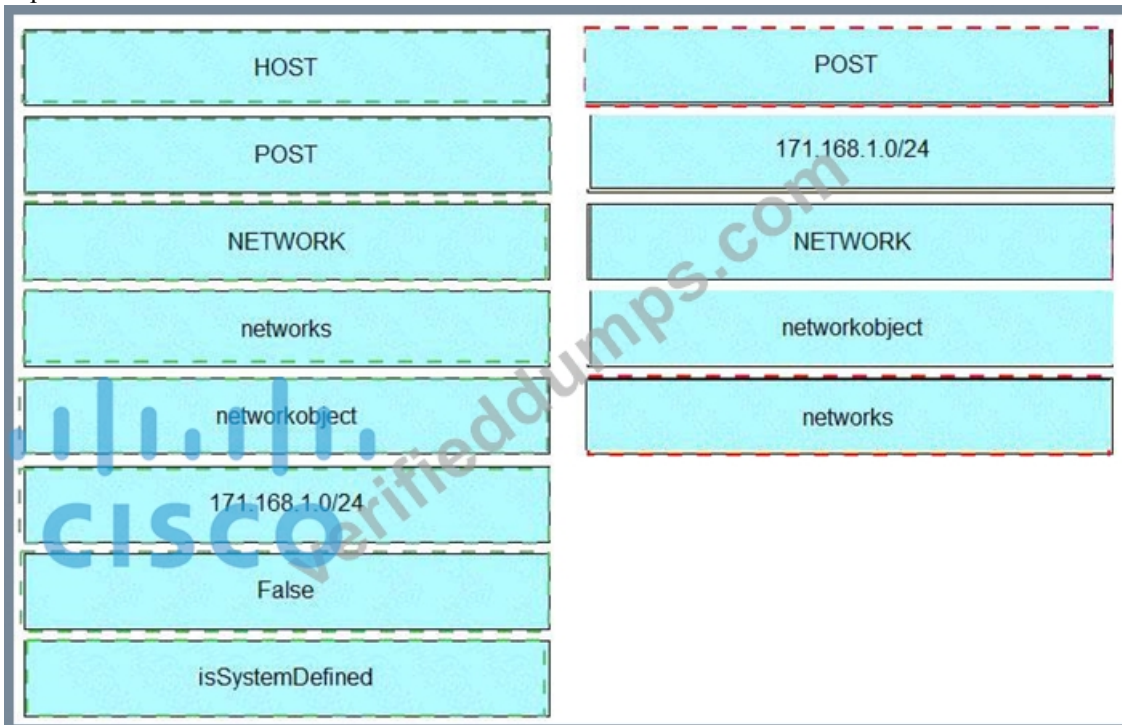

```
curl -X <item 1> -H "Authorization: Bearer exwsxads-sadads0as0d0-1w-1-1w-1w" --header 'Content-Type: application/json' --header 'Accept: application/json' -d '{
  "name": "171.168.1.z",
  "value": "<item 2>",
  "subType": "<item 3>",
  "type": "<item 4>"
}' 'https://ast0072-pod.cisco.com:33333/api/fdm/v4/object/<item 5>
```

Drag and drop the code snippets from the left onto the item numbers on the right that match the missing sections in the cURL exhibit to complete the cURL request to FirePower Device Manager API to create objects. Not all code snippets are used.

Answer:

Explanation:

NEW QUESTION # 135

Drag and Drop Question

Drag and drop the code from the bottom onto the box where the code is missing in the Python code to complete the greeter function while also mitigating against XSS threats. Not all options are used.

```

from datetime import datetime
from flask import Flask, request, make_response, escape
from flask_wtf.csrf import CSRFProtect

[ ]

csrf = CSRFProtect(app)

[ ]

def time():
    now = datetime.now()
    current_time = now.strftime("%H:%M:%S")
    return make_response("Current time: " + current_time)

def greeter():
    first_name = request.args.get("name", '')
    return make_response("Your name: " + [ ] )

[ ]

```

Answer:

Explanation:

```

from datetime import datetime
from flask import Flask, request, make_response, escape
from flask_wtf.csrf import CSRFProtect

```

```
app = Flask(_name_)
```

```
csrf = CSRFProtect(app)
```

```
@app.route('/time')
```

```
def time():
```

```
    now = datetime.now()
```

```
    current_time = now.strftime("%H:%M:%S")
```

```
    return make_response("Current Time: " + current_time)
```

```
@app.route('/greeter')
```

```
def greeter():
```

```
    first_name = request.args.get("name", '')
```

```
    return make_response("Your name: " + first_name)
```

```
escape(first_name)
```

```
last_name
```

NEW QUESTION # 136

Drag and Drop Question

Drag and Drop the application requirement on the left onto the database type that should be selected for the requirement on the right.

Application requirements

rapid transaction handling

highly horizontally scalable

enforced data integrity tools

elastic, scalable, schema free

structured query language

highly normalized data

Answer Area

Database type

Relational

Nonrelational

Answer:

Explanation:

Application requirements

Answer Area

Database type

Relational

highly normalized data

enforced data integrity tools

structured query language

Nonrelational

rapid transaction handling

elastic, scalable, schema free

NEW QUESTION # 137

Refer to the exhibit.

Parameter	Required	Type	Description
name	True	string	A string that is the name of the network object.
description	False	string	A string containing the description information. Field level constraints: length must be between 0 and 200 (inclusive). (Note: Additional constraints might exist)
subType	True	string	An enum value that specifies the network object type. HOST - A host type. NETWORK - A network type. FQDN - A FQDN type. RANGE - A range type. Field level constraints: cannot be null. (Note: Additional constraints might exist)
value	True	string	A string that defines the address content for the object. For HOST objects, this is a single IPv4 or IPv6 address without netmask or prefix. For NETWORK objects, this is an IPv4 or IPv6 network address with netmask (in CIDR notation) or prefix. For FQDN objects, this is a Fully qualified domain name. For RANGE objects, this is IPv4 or IPv6 addresses separated by '-' Field level constraints: cannot be null, must match pattern ^((?!;))*\$. (Note: Additional constraints might exist)
isSystemDefined	False	boolean	A Boolean value, TRUE or FALSE(the default). The TRUE value indicates that this Network object is a system defined object
dnsResolution	False	string	DNS Resolution type can be IPV4_ONLY, IPV6_ONLY or IPV4_AND_IPV6
type	True	string	A UTF8 string, all letters lower-case, that represents the class-type. This corresponds to the class name.

Refer to the exhibit. Drag and drop the code snippets from the bottom onto the blanks in the code to construct a Python script that creates a new network object in FDM. Not all options are used.

```
def main():
    args = sys.argv[1:]
    token = get_token()
    base_url = 'https://10.10.0.10:8080'

    networks_url = '/api/fdm/v4/object/ [ ] '

    headers = {
        'Authorization': 'Bearer {}'.format(token),
        'Content-Type': 'application/json'
    }
    payload = {
        'description': 'Network Object',
        'name': 'NetObj',
        'subType': '[ ]',
        'type': '[ ]',
        'value': '192.168.0.10/32'
    }
    response = requests.post(base_url + networks_url, data=payload,
        headers=headers)

if __name__ == "__main__":
    main()
```

networks	networkobject	get
HOST	post	token

Answer:

Explanation:

```
def main():
    args = sys.argv[1:]
    token = get_token()
    base_url = 'https://10.10.0.10:8080'

    networks_url = '/api/fdm/v4/object/ networks '

    headers = {
        'Authorization': 'Bearer {}'.format(token),
        'Content-Type': 'application/json'
    }
    payload = {
        'description': 'Network Object',
        'name': 'NetObj',
        'subType': 'HOST',
        'type': 'networkobject',
        'value': '192.168.0.10/32'
    }
    response = requests.post(base_url + networks_url, data=payload,
        headers=headers)

if __name__ == "__main__":
    main()
```

networks	networkobject	get
HOST	post	token
