

JS-Dev-101 Reliable Exam Answers - JS-Dev-101 Discount Code

What's more, part of that DumpsReview JS-Dev-101 dumps now are free: https://drive.google.com/open?id=1WW6sBNJuOSGD7miuHWg77_X5Pv0zvGN0

We would like to provide our customers with different kinds of JS-Dev-101 practice torrent to learn, and help them accumulate knowledge and enhance their ability. Besides, we guarantee that the questions of all our users can be answered by professional personal in the shortest time with our JS-Dev-101 study guide. One more to mention, we can help you make full use of your sporadic time to absorb knowledge and information. In a word, compared to other similar companies aiming at JS-Dev-101 Test Prep, the services and quality of our products are highly regarded by our customers and potential clients.

Salesforce JS-Dev-101 Exam Overview:

Certification Vendor:	Salesforce
Exam Name:	Salesforce Certified JavaScript Developer I - Multiple Choice Exam (JS-Dev-101)
Exam Number:	JS-Dev-101
Available Languages:	English
Exam Duration:	105 minutes
Certificate Validity Period:	1 year (maintenance required annually in Salesforce certification program)
Exam Price:	\$200 USD
Related Certifications:	Salesforce Platform Developer I Salesforce Platform Developer II
Real Exam Qty:	60 (multiple choice)
Exam Format:	Multiple Choice Questions, Multiple Select Questions
Passing Score:	65%
Recommended Training:	Salesforce Trailhead - JavaScript Developer I MDN Web Docs - JavaScript Guide
Exam Registration:	Kryterion Webassessor (Exam Delivery) Salesforce Certification Registration

Sample Questions:	Salesforce JS-Dev-101 Sample Questions
Exam Way:	Online proctored exam via Salesforce authorized testing platform (e.g., Webassessor)
Pre Condition:	No formal prerequisites, but familiarity with JavaScript and web development is recommended.
Official Syllabus URL:	https://trailhead.salesforce.com/credentials/javascriptdeveloper

JS-Dev-101 Discount Code - Certification JS-Dev-101 Test Answers

Perhaps you have also seen the related training tools about Salesforce certification JS-Dev-101 exam on other websites, but our DumpsReview has a pivotal position in the field of IT certification exam. DumpsReview research materials can 100% guarantee you to pass the exam. With DumpsReview your career will change and you can promote yourself successfully in the IT area. When you select DumpsReview you'll really know that you are ready to pass Salesforce Certification JS-Dev-101 Exam. We not only can help you pass the exam successfully, but also will provide you with a year of free service.

Salesforce JS-Dev-101 Exam Syllabus Topics:

Topic	Details
Topic 1	Objects, Functions, and Classes: Covers function, object, and class implementations to meet business requirements, along with the use of modules, decorators, variable scope, and execution flow.
Topic 2	Testing: Covers evaluating unit test effectiveness against a block of code and modifying tests to improve their coverage and reliability.
Topic 3	Debugging and Error Handling: Covers proper error handling techniques and the use of the console and breakpoints to debug code.
Topic 4	Browser and Events: Covers DOM manipulation, event handling and propagation, browser-specific APIs, and using Browser Developer Tools to inspect code behavior.
Topic 5	- Variables, Types, and Collections: Covers declaring and initializing variables, working with strings, numbers, dates, arrays, and JSON, along with understanding type coercion and truthy - falsy evaluations.

Salesforce Certified JavaScript Developer - Multiple Choice Sample Questions (Q125-Q130):

NEW QUESTION # 125

The developer has a function that prints "Hello" to an input name. To test this, the developer created a function that returns "World". However the following snippet does not print "Hello World".

```
const sayHello = (name) => {
  console.log("Hello" , name());};

const world = () => {
  return "world";
};

sayHello(world);
```

What can the developer do to change the code to print "Hello World" ?

- A. Change line 2 to `console.log('Hello',name() );`
- B. Change line 5 to `function world ( ) {`
- C. Change line 9 to `sayHello(world) ();`
- D. Change line 7 to `) () ;`

Answer: A

NEW QUESTION # 126

What are two unique features of functions defined with a fat arrow as compared to normal function definition?

Choose 2 answers

- A. The function receives an argument that is always in scope, called `parentThis`, which is the enclosing lexical scope. C. If the function has a single expression in the function body, the expression will be evaluated and implicit returned.
- B. The function uses the `this` from the enclosing scope.
- C. The function generated its own `this` making it useful for separating the function's scope from its enclosing scope.

Answer: A,C

NEW QUESTION # 127

A developer creates a new web server that uses Node.js. It imports a server library that uses events and callbacks for handling server functionality. The server library is imported with `require` and is made available to the code by a variable named `server`. The developer wants to log any issues that the server has while booting up.

Which code logs an error at boot time with an event?

- A. `server.error((error) => {
 console.log('ERROR', error);
});`
- B. `try {
 server.start();
} catch(error) {
 console.log('ERROR', error);
}`
- C. `server.on('error', (error) => {
 console.log('ERROR', error);
});`
- D. `server.catch((error) => {
 console.log('ERROR', error);
});`

Answer: C

Explanation:

Event-driven Node-style APIs expose events via `.on(eventName, handler)`.

To listen for error events:

```
server.on('error', (error) => {  
  console.log('ERROR', error);  
});
```

A and B assume methods `.error` or `.catch` that don't exist on typical event emitters.

C only catches synchronous errors from `server.start()`, not async event-based errors.

NEW QUESTION # 128

A developer needs to test this function:

```
01const sum3 = (arr) => (  
02if (!arr.length) return 0,  
03if (arr.length === 1) return arr[0],  
04if (arr.length === 2) return arr[0]+ arr[1],  
05 return arr[0] + arr[1] + arr[2],
```

06);

Which two assert statements are valid tests for the function?

Choose 2 answers

- **A. console.assert(sum3(-3, 2)) === -1);**
- B. console.assert(sum3(0)) === 0);
- C. console.assert(sum3('hello', 2, 3, 4)) === NaN);
- **D. console.assert(sum3(1, '2')) === 12);**

Answer: A,D

NEW QUESTION # 129

```
01 function changeValue(obj) {  
02   obj.value = obj.value / 2;  
03 }  
04 const objA = {value: 10};  
05 const objB = objA;  
06
```

```
07 changeValue(objB);
```

```
08 const result = objA.value;
```

What is the value of result after the code executes?

- **A. 0**
- B. low
- C. undefined
- D. 1

Answer: A

Explanation:

objA is { value: 10 }.

objB = objA; → both variables reference the same object.

changeValue(objB);:

obj.value = obj.value / 2; // modifies the shared object

So:

objA.value becomes 10 / 2 = 5.

Thus result is 5.
