

Updated NCP-EUC Test Cram | NCP-EUC Real Sheets

P.S. Free & New NCP-EUC dumps are available on Google Drive shared by VerifiedDumps: <https://drive.google.com/open?id=1A8pgcuZii0skilQo6XvCRe2g6t1fsGCd>

To fulfill our dream of helping our users get the NCP-EUC certification more efficiently, we are online to serve our customers 24 hours a day and 7 days a week. Therefore, whenever you have problems in studying our NCP-EUC test training, we are here for you. You can contact with us through e-mail or just send to our message online. And unlike many other customer service staff who have bad temper, our staff are gentle and patient enough for any of your problems in practicing our NCP-EUC study torrent. In addition, we have professional personnel to give you remote assistance on NCP-EUC exam questions.

The NCP-EUC Certification program is open to IT professionals who have experience working with Nutanix solutions in end-user computing environments. Candidates who pass the NCP-EUC exam will be awarded the Nutanix Certified Professional - End-User Computing certification, which is recognized as a mark of expertise in the industry. Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam certification program is a valuable investment for IT professionals who want to enhance their career prospects and demonstrate their expertise in end-user computing.

NCP-EUC Real Sheets, Valid NCP-EUC Exam Bootcamp

We are well-known for our wonderful performance on pushing more and more candidates to pass their NCP-EUC exams and achieve their dreaming certifications. There is no exaggeration to say that with our NCP-EUC study materials for 20 to 30 hours, you will be ready to pass your NCP-EUC Exam. Since our NCP-EUC exam torrent is designed on the purpose to be understood by our customers all over the world, it is compiled into the simplest language to save time and efforts.

Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q63-Q68):

NEW QUESTION # 63

A group of developers are migrating from physical computers to persistent virtual desktops. What is the recommended migration path?

- A. Deploy non-persistent desktops and install required applications.
- B. Deploy a base image and provision required hosted applications
- C. Convert the developers profile to a roaming profile.
- **D. Convert the physical computers to virtual desktops,**

Answer: D

Explanation:

persistent virtual desktops are virtual desktops that retain their state and configuration across sessions.

This means that users can customize their virtual desktops with their own applications, settings, and data, and have them available every time they log on.

Persistent virtual desktops are suitable for users who need a consistent and personalized experience, such as developers.

According to Nutanix best practices², one of the recommended migration paths for persistent virtual desktops is to convert the physical computers to virtual desktops.

This can be done by using a tool such as VMware Converter or Microsoft Disk2vhd to create a virtual disk image of the physical computer's hard drive.

Then, this image can be imported into Nutanix Cloud Platform and used as a base image for creating persistent virtual desktops.

This migration path can preserve the existing applications, settings, and data of the physical computers and minimize the disruption for the users.

NEW QUESTION # 64

What are two types OfFrame environment delivery models? (Choose two.)

- A. Nutanix private cloud model running AHV
- B. Frame on HP running Hyper-V.
- C. BYO public cloud
- D. Frame on Cisco LICs running VMware ESXi

Answer: A,C

Explanation:

Frame is a cloud-native desktop-as-a-service platform that allows you to deliver virtual desktops and applications from any cloud.

Frame supports multiple public clouds, such as AWS, Azure, GCP, and Alibaba Cloud². You can bring your own public cloud account and use Frame to provision and manage your virtual desktops on demand.

Frame also supports Nutanix private cloud model running AHV, which is a native hypervisor for Nutanix Enterprise Cloud Platform.

You can use Frame to deliver virtual desktops and applications from your own data center using Nutanix AHV clusters³. You can benefit from the simplicity, scalability, and performance of Nutanix hyperconverged infrastructure.

NEW QUESTION # 65

A company is deploying a Nutanix VDI solution across multiple data centers and will be using Files for their profile\home directories.

The company requires that users be able to access profile\home from a local Files cluster at the designated data center they will be logging into, based on the location they are working out of that day.

How can the administrator ensure that the solution meets the stated requirements?

- A. use Zerto software to replicate
- B. use Nutanix Advanced File Replication
- C. use Nutanix Protection Domains for replication.
- D. use PeerSync software to replicate.

Answer: B

Explanation:

Nutanix Files offers a feature called Smart DR, which enables share-level replication between active file server instances for disaster recovery.

Smart DR allows administrators to configure replication policies for each share, such as replication interval, retention period, and bandwidth limit.

Smart DR also supports failover and failback operations between source and target file servers in case of a disaster.

According to Nutanix best practices¹, Smart DR is suitable for scenarios where users need to access their files from different locations or data centers.

NEW QUESTION # 66

A company is using Citrix for virtual desktops on Nutanix with AHV. The studio has 10,000 users who will be connecting to this infrastructure and have deployed a dedicated Files cluster for holding the user home shares.

Since this is a dedicated cluster with dual Intel 6242 28 GHz 16 Core processors and 192GB of RAM, what should be done for the FSVM and CVM configuration to allow for optimal performance?

- **A. Leave the CVM RAM at 32GB and increase the FSVM RAM to 96GB.**
- B. Increase the CVM vCPUs to 16 and the FSW vCPUs to 12.
- C. Increase the CVM RAM to 64GB and the FSVM RAM to 96GB.
- D. Leave the CVM vCPUs et 12 and increase the FSVM vCPUs to 8,

Answer: A

Explanation:

<https://portal.nutanix.com/page/documents/solutions/details?targetId=TN-2041-Nutanix-Files:file-server-virtual-machines.html>

<https://next.nutanix.com/files-storage-71/command-line-access-to-nutanix-file-server-vm-fsvm-via-ssh-nutanix-files-33420> The file server VM (FSVM) is a virtual machine that runs on Nutanix Files and provides file services such as SMB shares and NFS exports. The FSVM is based on CentOS and incorporates all the security and hardening that goes into the Nutanix Controller VM (CVM)². The CVM is a virtual machine that runs on each node of a Nutanix cluster and provides storage management, data protection, cluster coordination, and other services³.

The FSVMs have some default configuration settings that can be changed depending on your workload requirements. For example, you can change the number of vCPUs, RAM, network interfaces, or disk size of an FSVM². However, you should not change these settings without consulting Nutanix Support first.

One of the factors that affects the performance of an FSVM is its memory allocation. The more memory an FSVM has, the more cache it can use for file operations. This can improve the throughput and latency of file serving workloads⁴. Therefore, increasing the FSVM RAM to 96GB can help optimize its performance for a large number of users.

NEW QUESTION # 67

An administrator needs to migrate MCS non-persistent workloads to Nutanix. Which statement is true regarding this task?

- A. MCS only supports migration to Citrix Cloud.
- B. Only persistent workloads can be migrated so this isn't applicable.
- **C. A replicated base image should be used to redeploy a new catalog.**
- D. All pooled VMs should be migrated using Move.

Answer: C

Explanation:

When migrating Machine Creation Services (MCS) non-persistent (pooled) environments to Nutanix, it is not efficient or recommended to migrate the individual worker VMs using migration tools like Nutanix Move.

These VMs are ephemeral clones that are deleted or reset upon reboot.

The correct architectural procedure is to migrate the Master Image (Gold Image). The administrator should replicate the base image VM to the Nutanix cluster (using Nutanix Move or Data Protection replication), install the necessary Nutanix drivers (VirtIO) and the Citrix VDA, and then snapshot this migrated image.

This snapshot is then used by the MCS service to redeploy a fresh catalog of worker VMs native to the Nutanix AHV infrastructure. This ensures all clones are properly linked to the new storage architecture and avoids the overhead of moving disposable data.

NEW QUESTION # 68

.....

There is no exaggeration that you can be confident about your coming exam just after studying with our NCP-EUC preparation materials for 20 to 30 hours. Tens of thousands of our customers have benefited from our exam materials and passed their exams with ease. The data showed that our high pass rate is unbelievably 98% to 100%. Without doubt, your success is 100% guaranteed with our NCP-EUC training guide. You will be quite surprised by the convenience to have an overview just by clicking into the link, and you can experience all kinds of NCP-EUC versions.
