IT인증 시험을 쉽게 취득하는 지름길은 ITDumpsKR에 있습니다. ITDumpsKR의 Salesforce 인증 Platform-App-Builder 덤프로 시험준비를 시작하면 성공에 가까워집니다. Salesforce 인증 Platform-App-Builder 덤프는 최신 시험문제 출제방향에 대비하여 제작된 예상문제와 기출문제의 모음자료입니다. Salesforce 인증 Platform-App-Builder 덤프는 시험을 통과한 IT업계 종사자들이 검증해주신 세련된 공부자료입니다. ITDumpsKR의 Salesforce 인증 Platform-App-Builder 덤프를 공부하여 자격증을 따시다.

최신 Salesforce App Builder Platform-App-Builder 무료 샘플문제 (Q29-Q34):

질문 # 29

After universal containers converted qualified leads. Sales reps need to be able to report on converted leads. How should an app builder support for this requirement ?

- A. Assign the representative view and edit converted leads permission
- **B. Enable preserve lead status in the lead conversion settings**
- C. Ensure the representative has read access to the original lead records
- D. Create a custom report type with converted leads as the primary object

정답: B

질문 # 30

A new app builder on the Cloud Kicks team is getting familiar with the data model. They want to see how standard objects and custom objects relate.

Which functionality should the app builder use to view these relationships?

- A. Fields & Relationships
- B. Lightning App Builder
- C. Object Manager
- **D. Schema Builder**

정답: D

설명:

Schema Builder provides a graphical representation of all standard and custom objects and their field and relationship structure. It's the best tool for visualizing how data objects are interconnected.

* Why D (Schema Builder) is correct: Exact Extract: "Schema Builder provides a dynamic environment for viewing and modifying all the objects and relationships in your organization. You can add new custom objects, fields, and relationships directly in the schema." - Salesforce Help | Schema Builder Overview

* Why not A (Fields & Relationships): That section displays fields for a single object only, not overall relationships.

* Why not B (Object Manager): The Object Manager allows object configuration but doesn't visually display relationships.

* Why not C (Lightning App Builder): That tool is for UI layout, not data model visualization.

질문 # 31

Sales representatives want to capture custom Feedback record details related to each Account. The sales reps want to accomplish this with minimal clicks on the Salesforce1 mobile application. What is the recommended solution to meet this requirement? Choose 2 answers.

- A. Create a feedback object as a parent of Account
- B. Create a global action on Account.
- **C. Create an object-specific action on Account**
- **D. Create predefined values for most of the fields.**

정답: C,D

질문 # 32

Universal Containers wants to understand return on investment for the latest advertising buy. They currently use a private security model for all objects. What should an app builder recommend?

- A. Change to a public security model
- B. On an opportunities pipeline report
- C. Online Account Hierarchies and Raft Up Summary fields
- **D. Configure Campaign Hierarchies and Campaign stasemics**

정답: D

설명:

The key is to separate behavior from appearance. The best answer is C. Configure Campaign Hierarchies and Campaign stasemics. The Platform App Builder role is to choose the standard Salesforce capability that owns the behavior: data structure, access, automation, user experience, reporting, or deployment.

The selected answer is stronger because it meets both the functional requirement and the maintainability requirement. In a Salesforce implementation, a solution that only works for one user, one page, or one data sample is not good enough. The correct feature has to behave consistently across the intended profiles, record types, apps, and devices that are part of the design.

None of the other options gives the same administrative control. A (On an opportunities pipeline report) does not fit cleanly; Reporting configuration helps analysis, but it does not enforce the requested record behavior.

B (Online Account Hierarchies and Raft Up Summary fields) is only a partial match because it does not provide the same direct administrative control as the selected option. D (Change to a public security model) is not enough: it would require extra assumptions that the scenario does not support. This is the stronger design because it respects security, data quality, user experience, and lifecycle management at the same time.

질문 # 33

Cloud Kicks has three types of customer support processes: Platinum, Diamond, and Bronze. The app builder created separate record types for each process on the Case object. The customer support team should be unable to create new cases with the Bronze record type.

How should this requirement be met?

- A. Make the record type hidden to support users; update sharing roles to private.
- B. Create permission set group for Case that includes Platinum and Diamond record types.
- **C. Update the support team profile to remove the Bronze record type.**
- D. Update the organization-wide defaults to private for Case.

정답: C

설명:

Explanation

The solution that should meet this requirement is updating the support team profile to remove the Bronze record type. This way, the support team users will not be able to create new cases with the Bronze record type, as it will not appear in their record type selection list. Option A is incorrect because updating the organization-wide defaults to private for Case does not affect the record type availability, but rather the record access level. Option C is incorrect because creating permission set group for Case that includes Platinum and Diamond record types does not prevent the support team users from creating new cases with the Bronze record type, as they may still have access to it through their profile. Option D is incorrect because making the record type hidden to support users and updating sharing roles to private does not prevent the support team users from creating new cases with the Bronze record type, as they may still have access to it through their profile.
