# Platform-App-Builder training study guide & Salesforce Certified Platform App Builder practice pdf dumps

Each question and answer of our Platform-App-Builder training questions are researched and verified by the industry experts. Our team updates the Platform-App-Builder certification material periodically and the updates include all the questions in the past thesis and the latest knowledge points. So our service team is professional and top-tanking on the Platform-App-Builder Exam braindump. And if you have any questions on our study guide, our services will help you with the right and helpful suggestions. Just have a try on our Platform-App-Builder learning prep!

## Salesforce Certified Platform App Builder Sample Questions (Q182-Q187):

### NEW QUESTION # 182

At Universal Containers, the Account object has a Master-Detail relationship with an Invoice custom object. The App Builder would like to change to a lookup field, but is not able to do so. What could be causing this?

- A. The Invoice records have existing values in the Account.
- B. The invoice must have at least one Master-Detail field for reporting.
- C. The Account is included in the workflow on the Invoice object.
- **D. The Account record includes Invoice roll-up summary fields.**

**Answer: D**

Explanation:

The Account record includes Invoice roll-up summary fields. This is correct because roll-up summary fields are only available on the master object in a master-detail relationship, and changing the field type to lookup would delete the roll-up summary fields

### NEW QUESTION # 183

Universal Containers wants to match Opportunity data from Salesforce to the records in a financial database.

What is required to configure an indirect lookup relationship in Salesforce between the Salesforce Opportunity records and those in a financial database?

- **A. External ID**
- B. Salesforce Record ID
- C. TEXT(Id)
- D. CASESAFE(Id)

**Answer: A**

Explanation:

Explanation

An indirect lookup relationship is a custom relationship between two objects that are linked by an external ID field. The external ID field must be a custom field on the parent object that has the "External ID" attribute enabled. The child object must be a standard or custom object that is on the detail side of a master-detail or lookup relationship.

### NEW QUESTION # 184

When an opportunity has a closed date that is pushed more than 30 days, manager approval is required. An approval process is in place but reps frequently forget to submit for approval to run the process.

How can an app builder ensure that these opportunities are submitted into the approval process?

- A. Change the entry criteria on the approval process to criteria are met and lock the record on initial submission.
- B. Use a validation rule and an email alert to the manager requesting approval.
- C. Give the manager the "API Enabled" permission to permit approval responses by email.
- **D. Submit the record for approval from an automated process.**

**Answer: D**

Explanation:

Sales reps are forgetting to manually submit the record for approval. The correct declarative solution is to automate the submission

when conditions are met - in this case, when the Opportunity Close Date is pushed more than 30 days.

This can be achieved using Flow Builder or Process Builder (deprecated) to automatically submit the record into the existing approval process.

\* Why C (Submit the record for approval from an automated process) is correct:Exact Extract:"You can automatically submit a record for approval from a process or flow when specified criteria are met." - Salesforce Help | Automate Record Approval with FlowThis ensures the approval process runs automatically whenever the rule is triggered, eliminating user dependency.

Why C (Submit the record for approval from an automated process) is correct:Exact Extract:"You can automatically submit a record for approval from a process or flow when specified criteria are met." - Salesforce Help | Automate Record Approval with FlowThis ensures the approval process runs automatically whenever the rule is triggered, eliminating user dependency.

\* Why not A:The "API Enabled" permission allows programmatic access; it has no impact on triggering approvals.

\* Why not B:A validation rule and email alert only notify; they do not submit the record into the approval process.

\* Why not D:Changing entry criteria doesn't auto-submit; it only defines which records can enter if submitted.

### NEW QUESTION # 185

Which three statements are true about Master-Detail relationships? (Choose three.)

- A. A Master-Detail relationship cannot be created if the custom object on the detail side already contains data.
- B. Master-Detail relationships cannot be converted to a look-up relationship.
- C. Master-Detail relationships can convert to a lookup relationship if no roll-up summary fields exist on the master object.
- D. Standard objects can be on the detail side of a custom object in a Master-Detail relationship.
- E. Deleting a master record in a Master-Detail relationship deletes all related detail records.

Answer: A,C,E

### NEW QUESTION # 186

Universal Containers (UC) wants to test code against a subset of production data that is under 5 GB.

Additionally, UC wants to refresh this sandbox every weekend.

Which type of sandbox should be used to accomplish this?

- A. Partial Copy
- B. Developer
- C. Full Copy
- D. Developer Pro

Answer: A

Explanation:

To test code against a subset of production data under 5 GB and to refresh the sandbox environment weekly, the most suitable type of sandbox is:

\* Partial Copy (B). A Partial Copy sandbox includes a copy of your production org's metadata and a subset of your production data as defined by the sandbox template. It allows up to 5 GB of data and can be refreshed every 5 days, making it ideal for scenarios where a representative sample of production data is needed for testing without the storage and refresh limitations of a Full Copy sandbox.

Developer Pro (A) and Developer (D) sandboxes also allow for testing and development but do not include a subset of production data-they either have no data or only limited sample data. A Full Copy sandbox (C) provides a full replica of production data, far exceeding the 5 GB requirement and generally is refreshed less frequently due to larger data volume and longer copy times.

Reference for sandbox types and their capabilities:
