If you can get the certification for the exam, it not only can prove the ability of you but also can improve your competitive force in the job hunting market. AWS-Solutions-Architect-Associate exam braindumps are high quality and accuracy, and we can help you pass the exam in your first attempt, otherwise we will give you refund. Moreover, AWS-Solutions-Architect-Associate test materials contain most of the knowledge points for the exam, and you can pass the exam as well as improve your ability in the process of learning. AWS-Solutions-Architect-Associate exam materials offer you free update for 365 days after payment, and the update version will be sent to your email automatically.

The AWS-Solutions-Associate certification exam covers a broad range of topics, including AWS core services, security, database, networking, compute, storage, and AWS deployment and management. AWS-Solutions-Architect-Associate Exam consists of 65 multiple-choice and multiple-response questions, and candidates have 130 minutes to complete the exam. The passing score for the AWS-Solutions-Associate certification exam is 720 out of 1000, and the exam fee is \$150. Upon passing the exam, candidates will receive an AWS Certified Solutions Architect - Associate certificate, which is valid for two years.

AWS-Solutions-Architect-Associate Free Sample Questions & Latest AWS-Solutions-Architect-Associate Exam Dumps

Whether you are a student or a professional who has already taken part in the work, you must feel the pressure of competition now. However, no matter how fierce the competition is, as long as you have the strength, you can certainly stand out. And our AWS-Solutions-Architect-Associate exam questions can help on your way to be successful. Our data shows that 98% to 100% of our worthy customers passed the AWS-Solutions-Architect-Associate Exam and got the certification. And we believe you will be the next one as long as you buy our AWS-Solutions-Architect-Associate study guide.

Holding the AWS-Solutions-Architect-Associate Certification demonstrates an individual's expertise in designing and implementing scalable, highly available, and fault-tolerant systems on AWS. AWS Certified Solutions Architect - Associate (SAA-C03) certification can lead to better job opportunities, higher salaries, and increased credibility in the industry. Furthermore, individuals who hold this certification are recognized as having the skills and knowledge necessary to help organizations leverage the full potential of AWS cloud infrastructure.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q325-Q330):

NEW QUESTION # 325

Is there a limit to how many groups a user can be in?

- A. Yes unless special permission granted
- B. No
- C. Yes for all users
- D. Yes for all users except root

Answer: C

NEW QUESTION # 326

A Solutions Architect is designing a high-performance computing job that runs on Amazon EC2 instances in private subnets. To allow the application to download patches, the infrastructure must be altered to allow the instances to access external endpoints. Any changes to the infrastructure must involve minimal ongoing systems management effort.

What will allow the EC2 instances to access the endpoint while meeting these requirements?

- A. AWS Direct Connect
- B. Virtual private gateway
- C. Elastic IP address
- D. NAT gateway

Answer: D

NEW QUESTION # 327

An organization is having an application which can start and stop an EC2 instance as per schedule. The organization needs the MAC address of the instance to be registered with its software. The instance is launched in EC2-CLASSIC.

How can the organization update the MAC registration every time an instance is booted?

- A. The organization should write a boot strapping script which will get the MAC address from the instance metadata and use that script to register with the application.
- B. The instance MAC address never changes. Thus, it is not required to register the MAC address every time.
- C. The organization should provide a MAC address as a part of the user data. Thus, whenever the instance is booted the script assigns the fixed MAC address to that instance.
- D. AWS never provides a MAC address to an instance; instead the instance ID is used for identifying the instance for any software registration.

Answer: A

Explanation:

AWS provides an on demand, scalable infrastructure. AWS EC2 allows the user to launch On- Demand instances. AWS does not provide a fixed MAC address to the instances launched in EC2-CLASSIC. If the instance is launched as a part of EC2-VPC, it can have an ENI which can have a fixed MAC. However, with EC2-CLASSIC, every time the instance is started or stopped it will have a new MAC address. To get this MAC, the organization can run a script on boot which can fetch the instance metadata and get the MAC address from that instance metadata. Once the MAC is received, the organization can register that MAC with the software.

NEW QUESTION # 328

A company hosts an application used to upload files to an Amazon S3 bucket. Once uploaded, the files are processed to extract metadata, which takes less than 5 seconds. The volume and frequency of the uploads varies from a few files each hour to hundreds of concurrent uploads. The company has asked a solutions architect to design a cost effective architecture that will meet these requirements.

What should the solutions architect recommend?

- A. Configure AWS CloudTrail trails to log S3 API calls. Use AWS AppSync to process the files.
- B. Configure an Amazon Simple Notification Service (Amazon SNS) topic to process the files uploaded to Amazon S3. Invoke an AWS Lambda function to process the files.
- C. Configure Amazon Kinesis Data Streams to process and send data to Amazon S3. Invoke an AWS Lambda function to process the files.
- D. Configure an object-created event notification within the S3 bucket to invoke an AWS Lambda function to process the

files.

Answer: B

NEW QUESTION # 329

A company has an on-premises MySQL database used by the global sales team with infrequent access patterns. The sales team requires the database to have minimal downtime. A database administrator wants to migrate this database to AWS without selecting a particular instance type in anticipation of more users in the future. Which service should a solutions architect recommend?

- A. Amazon Aurora MySQL
- B. Amazon RDS for MySQL
- C. Amazon Redshift Spectrum
- **D. Amazon Aurora Serverless for MySQL**

Answer: D

Explanation:

Amazon Aurora Serverless for MySQL is a fully managed, auto-scaling relational database service that scales up or down automatically based on the application demand. This service provides all the capabilities of Amazon Aurora, such as high availability, durability, and security, without requiring the customer to provision any database instances. With Amazon Aurora Serverless for MySQL, the sales team can enjoy minimal downtime since the database is designed to automatically scale to accommodate the increased traffic.

Additionally, the service allows the customer to pay only for the capacity used, making it cost-effective for infrequent access patterns. Amazon RDS for MySQL could also be an option, but it requires the customer to select an instance type, and the database administrator would need to monitor and adjust the instance size manually to accommodate the increasing traffic.
