They have a keen sense of smell on the trend of changes in the exam questions. Therefore, with the help of these experts, the contents of Plat-Dev-210 exam questions must be the most advanced and close to the real exam.

## Salesforce Certified Omnistudio Developer Sample Questions (Q81-Q86):

### NEW QUESTION # 81

A developer needs to configure a Data Mapper to retrieve data from a single object. The structure of the output data does not need to be changed.

Following best practices, which type of Data Mapper should the developer use?

- A. Data Mapper Transform
- B. Data Mapper Extract
- C. Data Mapper Load
- D. **Data Mapper Turbo Extract**

### Answer: D

Explanation:

The correct answer is D. Data Mapper Turbo Extract, based on best practices in the official OmniStudio documentation.

From the OmniStudio Developer Guide # DataRaptors # Turbo Extract:

\* DataRaptor Turbo Extract is a lightweight, high-performance extract designed specifically for retrieving data from a single Salesforce object, where no data transformation or complex joins are required.

\* It is recommended over DataRaptor Extract for performance reasons when only one object and minimal transformation is needed. Why not the others?

\* A. DataRaptor Load is used for writing data to Salesforce, not retrieving.  
\* B. DataRaptor Transform is used when you need to transform data, not simply extract it.  
\* C. DataRaptor Extract can be used, but Turbo Extract is preferred for the use case of single object, no transformation - per best practices.

### NEW QUESTION # 82

In an Expression Set, what is required for the output of a Calculation Step to be used in an Aggregation Step?

- A. It must be a calculation step.
- B. It must be included in constants.
- C. **It must be included in the output.**

### Answer: C

Explanation:

In Expression Sets, for any intermediate step (like Calculation) to be referenced in subsequent steps, such as Aggregation, the value must be made available via Output.

\* B. It must be included in the output - Correct. Each step has an "Include in Output" checkbox. If not checked, its result is not accessible to following steps like Aggregation or Sub Expression.

Incorrect Options:

\* A. Constants are global but do not affect step dependency.  
\* C. It does not have to be a Calculation Step; any previous step's output can be used if exposed.

Salesforce OmniStudio # Expression Sets - Step Configuration

### NEW QUESTION # 83

A developer needs to build a multi-step intake form. Each step must allow the user to cancel the intake at any time. The developer is using an LWC OmniScript to build the form.

How should the developer implement the cancel functionality for all steps using the LWC OmniScript Designer?

- A. Add a navigation Action inside each step and set the Component name to "Cancel",
- **B. Check the Enable Cancel checkbox in the Setup tab under Cancel Options.**
- C. Add a navigation Action outside each step and set the Element Name to "Cancel",
- D. Add a navigation Action inside each step and set the Element Name to "Cancel",

**Answer: B**

Explanation:

Checking the Enable Cancel checkbox in the Setup tab under Cancel Options allows the developer to enable the cancel functionality for all steps in the OmniScript. The user can cancel the OmniScript at any time by clicking the Cancel button in the top right corner of the OmniScript. Adding a navigation Action inside each step is not necessary and would clutter the OmniScript design. Setting the Component name or Element Name to "Cancel" has no effect on enabling the cancel functionality.

#### NEW QUESTION # 84

A developer writes an OmniScript that includes a DataRaptor that updates the Account status based on information provided from the OmniScript. The information must be updated only if the Account record already exists. Otherwise, a new account must be created.

How should the developer accomplish this task?

- A. Populate the Lookup Object and Lookup Fields
- **B. Check the Upsert Key and Is Required for Upsert checkboxes on the Account Id field**
- C. Check Overwrite Target for All Null Inputs checkbox on the Account Id field
- D. Check the Upsert Key checkbox on the Account Status field

**Answer: B**

Explanation:

The Upsert Key checkbox indicates that the field is used as a key for upserting records. The Is Required for Upsert checkbox indicates that the field is mandatory for upserting records. The developer needs to check both checkboxes on the Account Id field to update the Account status only if the Account record already exists. Otherwise, a new account will be created.

#### NEW QUESTION # 85

A developer is building an OmniScript and needs to retrieve data from Salesforce and from an on-premises billing database.

Which two OmniScript elements could retrieve this data?

Choose 2 answers

- A. Navigate Action
- B. Response Action
- **C. HTTP Action**
- **D. DataRaptor Extract Action**

**Answer: C,D**

Explanation:

According to the OmniScript Action Elements page, a DataRaptor Extract Action can be used to "get data from one or more Salesforce records" and an HTTP Action can be used to "get, save, or delete data through a web application programming interface (API)".

#### NEW QUESTION # 86

.....

These Plat-Dev-210 exam questions braindumps are designed in a way that makes it very simple for the candidates. Each and every Plat-Dev-210 topic is elaborated with examples clearly. Use ActualTestsQuiz top rate Salesforce Plat-Dev-210 Exam Testing Tool for making your success possible. Plat-Dev-210 exam preparation is a hard subject. Plenty of concepts get mixed up together due to which student feel difficult to identify them. There is no similar misconception in Plat-Dev-210 Dumps because we have made it more interactive for you. The candidates who are less skilled may feel difficult to understand the Plat-Dev-210 questions can take

help from these braindumps. The tough topics of Plat-Dev-210 certification have been further made easy with examples, simulations and graphs. Candidates can avail the opportunity of demo of free Plat-Dev-210 dumps.
