## Mule-Dev-202 Latest Exam Testking | Mule-Dev-202 Reliable Test Objectives

Without a doubt, there is one thing that can assist them with perceiving this interest and clearing their Salesforce Certified MuleSoft

Hyperautomation Developer (Mule-Dev-202) exam with flying colors. Salesforce Mule-Dev-202 dumps merge all that gigantic and the competitor doesn't require to purchase the aide or different books to review. They have this test material and need nothing else for planning Salesforce Certified MuleSoft Hyperautomation Developer exam

## Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q28-Q33):

### NEW QUESTION # 28

Northern Trail Outfitters is developing an API that connects to a vendor's database.

Which two strategies should their Ops team use to monitor the overall health of the API and database using API Functional Monitoring? (Choose two.)

- A. Make a call to a health-check endpoint, and then verify that the endpoint is still running.
- B. Monitor the CloudHub worker logs for JDBC database connection exceptions.
- C. Monitor the Mule worker logs for "ERROR" statements and verify that the results match expected errors.
- D. Make a GET call to an existing API endpoint, and then verify that the results match expected data.

**Answer: A,D**

Explanation:

**Health-Check Endpoint:**Creating and regularly calling a health-check endpoint is a common strategy to ensure that the API and its underlying systems are operational. This endpoint typically performs basic checks such as database connectivity and service availability.

**Reference:**Health Check Pattern

**GET Call to Existing Endpoint:**Making a GET call to an existing API endpoint and verifying that the results match expected data helps ensure that the API is not only running but also functioning correctly. This approach validates that the API can retrieve data from the database as intended.

**Reference:**API Monitoring Best Practices

**Monitoring CloudHub Worker Logs:**While monitoring logs can be useful, it is more of a reactive approach.

Proactive strategies like health-check endpoints and GET calls provide immediate validation of the API's operational status.

**Reference:**CloudHub Monitoring

**Verifying Mule Worker Logs for Errors:**This approach can complement health-check endpoints and GET calls but should not be the primary strategy. Logs are helpful for diagnosing issues after they occur rather than ensuring ongoing health.

**Reference:**Error Handling and Logging

### NEW QUESTION # 29

AnyAirlines releases a new REST API that exposes access to an RPA process. The RPA process can only handle a limited number of interactions per second before the API begins returning errors.

Which policy should AnyAirlines apply to prevent the API from being overloaded?

- A. Rate Limiting - SLA
- B. Client ID Enforcement
- C. Spike Control
- D. JSON threat protection

**Answer: C**

Explanation:

To prevent an API from being overloaded, the Spike Control policy is suitable. It helps manage sudden bursts of traffic by limiting the rate at which requests are processed. Here's how it works:

**Preventing Overloads:**

Spike Control smooths out bursts of incoming requests by enforcing a rate limit over a short period, protecting the backend systems from being overwhelmed by excessive traffic.

**Configuration:**

Apply the Spike Control policy to the API to define the maximum number of requests allowed within a specific timeframe.

This ensures that the API can handle a limited number of interactions per second, preventing errors due to overload.

**Implementation:**

In Anypoint Platform, configure the Spike Control policy to the desired thresholds, ensuring the RPA process can handle the load effectively without errors.

**NEW QUESTION # 30**

Which Connected App scope should be used to connect RPA Manager with an Anypoint Platform account?

- A. Application Creator
- B. Exchange Administrator
- **C. RPA Integrator**
- D. API Catalog Contributor

**Answer: C**

Explanation:

To connect RPA Manager with an Anypoint Platform account, the appropriate Connected App scope is RPA Integrator:

RPA Integrator Scope:

The RPA Integrator scope is designed to provide the necessary permissions for integrating RPA Manager with Anypoint Platform. This scope allows the connected app to interact with the RPA Manager and manage RPA processes.

Connected App Configuration:

When setting up a connected app in Anypoint Platform, select the RPA Integrator scope to ensure that the integration can access and manage the RPA processes as required.

Anypoint Platform Connected Apps Documentation

**NEW QUESTION # 31**

Which API policy can be applied to limit the number of requests an individual client can make to an API?

- A. Client ID Enforcement
- B. OAuth 2.0 access token enforcement
- **C. Rate limiting - SLA-Based**
- D. Spike Control

**Answer: C**

Explanation:

The Rate Limiting - SLA-Based policy in Anypoint Platform is designed to control the number of requests an individual client can make to an API. This policy is highly configurable and allows you to set specific limits based on service level agreements (SLAs).

Rate Limiting - SLA-Based:

This policy helps protect APIs from being overwhelmed by too many requests by enforcing a limit on the number of requests a client can make within a specified time frame.

You can define different rate limits for different tiers of clients, ensuring fair usage and protecting backend services.

Anypoint Platform Rate Limiting Documentation

**NEW QUESTION # 32**

A Salesforce admin for AnyAirlines constructs a MuleSoft Composer flow that retrieves a record based on a unique ID using the Get Records action from a Salesforce connector. They will use the result to send a Slack message.

How can they achieve this task?

- A. 1. Add a For Each loop after the Salesforce action step iterating over the collection of Salesforce records. 2. Use a Slack action step to construct the messages from the record being processed.
- **B. 1. Add a Slack action step after the Salesforce action step. 2. Use the record to construct the message.**
- C. 1. Add a Slack action step after the Salesforce action step. 2. Use the first record from the collection of Salesforce records to construct the message.
- D. 1. Add an If/Else Block after the Salesforce action step, which contains a branch checking if the Salesforce action step returned exactly one record. 2. In the branch, add a Slack action step and use the record to construct the message.

**Answer: B**

Explanation:

**Salesforce Action Step:**Start by adding a Salesforce action step that uses the Get Records action to retrieve the record based on a unique ID. This action retrieves the specific record needed.

Reference:MuleSoft Composer Salesforce Connector

**Add Slack Action Step:**After retrieving the record, add a Slack action step. This step will be used to send the message to Slack.

Reference:MuleSoft Composer Slack Connector

**Use the Record:**Use the retrieved record directly to construct the message in the Slack action step. This ensures the message contains the relevant information from the Salesforce record.

Reference:Building Messages in Composer

**No Need for Collection Handling:**Since the Get Records action retrieves a single record based on a unique ID, there is no need to handle collections or iterate through records.

Reference:Get Records Action

## NEW QUESTION # 33

.....

You can even print the study material and save it in your smart devices to study anywhere and pass the Salesforce Certified MuleSoft Hyperautomation Developer (Mule-Dev-202) certification exam. The second format, by Pass4cram, is a web-based Mule-Dev-202 practice exam that can be accessed online through browsers like Firefox, Google Chrome, Safari, and Microsoft Edge. You don't need to download or install any excessive plugins or Software to use the web-based software.
