Identity-and-Access-Management-Architect試験の準備方法 | 最新のIdentity-and-Access-Management-Architect日本語独学書籍試験 | 検証するSalesforce Certified Identity and Access Management Architect試験勉強攻略

長年の努力と革新とクライアントベースのコンセプトを中心に、当社は業界の旗艦企業に成長しました。当社は、Identity-and-Access-Management-Architect試験の準備の質の向上に苦勞し、Identity-and-Access-Management-Architectスタディガイドの研究と革新に多大な努力とお金を投資しています。業界での当社のブランド名は、優れたIdentity-and-Access-Management-Architect学習ガイドで有名です。高品質、思いやりのあるサービス、絶え間ない革新、そしてIdentity-and-Access-Management-Architect試験問題での最初の顧客の概念は、当社の4つの柱です。

Salesforce Identity-and-Access-Management-Architect試験は、Salesforceにおけるアイデンティティとアクセス管理に特化した専門家向けの認定試験です。この認定試験は、Salesforceプラットフォームに深い理解を持ち、複雑なアイデンティティとアクセス管理ソリューションを顧客に提供できる個人を対象としています。この試験は、Salesforceエコシステムにおける最も求められる認定資格の一つであり、アイデンティティとアクセス管理の専門知識のベンチマークとして認められています。

Salesforce Certified Identity and Access Management Architect 認定Identity-and-Access-Management-Architect 試験問題 (Q56-Q61):

質問 # 56

Universal Containers want users to be able to log in to the Salesforce mobile app with their Active Directory password. Employees are unable to use mobile VPN.

Which two options should an identity architect recommend to meet the requirement?

Choose 2 answers

- A. Active Directory Password Sync Plugin
- B. Configure Cloud Provider Load Balancer
- C. Salesforce Trigger & Field on Contact Object
- D. Salesforce Identity Connect

正解: A、D

解説:

Explanation

Active Directory Password Sync Plugin allows users to log in to Salesforce with their Active Directory password without using a VPN. Salesforce Identity Connect synchronizes users and groups between Active Directory and Salesforce and enables single sign-on. References: Active Directory Password Sync Plugin, Salesforce Identity Connect

質問 # 57

An architect needs to advise the team that manages the identity provider how to differentiate salesforce from other service providers. What SAML SSO setting in salesforce provides this capability?

- A. Identity provider login URL
- B. Issuer
- C. SAML identity location
- D. Entity id

正解: D

解説:

Explanation

The Entity ID is the SAML SSO setting in Salesforce that provides the capability to differentiate Salesforce from other service providers. The Entity ID is a unique identifier for the service provider that is sent in the SAML request and response messages¹. The identity provider uses the Entity ID to determine which service provider is requesting or receiving authentication information². You can customize the Entity ID for your Salesforce org or Experience Cloud site in the SAML Single Sign-On Settings page³.

質問 # 58

Universal Containers (UC) is planning to deploy a custom mobile app that will allow users to get e-signatures from its customers on their mobile devices. The mobile app connects to Salesforce to upload the e-signature as a file attachment and uses OAuth protocol for both authentication and authorization. What is the most recommended and secure OAuth scope setting that an Architect should recommend?

- A. Web
- B. Api
- C. Id
- D. Custom_permissions

正解: D

解説:

The most recommended and secure OAuth scope setting for UC's custom mobile app is custom_permissions.

Custom_permissions are settings that can be used in Apex code or validationrules to check whether a user has access to a custom feature or functionality. Custom_permissions can also be used as OAuth scopes to limit the access of an external application, such as UC's mobile app, to certain custom features or functionalities in Salesforce. By configuring custom_permissions as OAuth scopes in the connectedapp settings, UC can restrict the mobile app access to only the e-signature feature and protect against unauthorized or excessive access.

The other options are not recommended or secure OAuth scope settings for UC's custom mobile app. Id is an OAuth scopethat allows the mobile app to access basic information about the user and their org, such as name, email, profile picture, and instance URL. This scope does not provide any access to Salesforce data or features, such as uploading e-signatures. Web is an OAuth scope that allows the mobile app to access Salesforce data and features through a browser or web-view. This scope provides full access to Salesforce data and features, which could expose sensitive information or allow unwanted actions. Api is an OAuthscope that allows the mobile app to make REST or SOAP API calls to Salesforce using the access token. This scope also provides full access to Salesforce data and features, which could compromise security and compliance.

質問 # 59

Universal Containers (UC) has a Desktop application to collect leads for marketing campaigns. UC wants to extend this application to integrate with Salesforce to create leads. Integration between thedesktop application and salesforce should be seamless. What Authorization flow should the Architect recommend?

- A. JWT Bearer Token flow
- B. Web Server Authentication Flow
- C. User Agent Flow
- D. Username and Password Flow

正解: A

解説:

The JWT Bearer Token flowis an OAuth flow in which an external app (also called client or consumer app) sends a signed JSON string to Salesforce called JWT to obtain an access token. The access token canthen be used by the external app to read and write data in Salesforce¹. This flow is suitable for UC's scenario because it allows seamless integration between the desktop application and Salesforce without requiring user interaction or login credentials². The other options are not valid authorization flows for this scenario. The Web Server Authentication Flow and the User Agent Flow both require user interaction and redirection to the Salesforce OAuthauthorization endpoint, which is not seamless³. The Username and Password Flow requires the external app to store the user's login credentials, which is not secure or recommended³.

質問 # 60

An identity architect is setting up an integration between Salesforce and a third-party system. The third-party system needs to authenticate to Salesforce and then make API calls against the REST API.

One of the requirements is that the solution needs to ensure the third party service providers connected app in Salesforce mini need for end user interaction and maximizes security.

Which OAuth flow should be used to fulfill the requirement?

- A. JWT Bearer Flow
- B. Username-Password Flow
- C. User Agent Flow
- D. Web Server Flow

正解: A
