問題 #238
A report scheduled to run every 15 mins. but takes 17 mins. to complete is in danger of being_____.

- A. automatically accelerated
- B. deleted
- C. skipped or deferred
- D. all of the above

答案：C

解題說明：
A report that is scheduled to run every 15 minutes but takes 17 minutes to complete is in danger of being skipped or deferred2. This means that Splunk may skip some scheduled runs of the report if they overlap with previous runs that are still in progress or defer them until the previous runs are finished2. This can affect the accuracy and timeliness of the report results and notifications2. Therefore, option A is correct, while options B, C and D are incorrect because they are not consequences of a report taking longer than its schedule interval.

問題 #239
The command shown here does witch of the following: Command: |outputlookup products.csv

- A. Returns the contents of a file named products.csv
- B. Writes search results to a file named products.csv

答案：B

問題 #240
Which of the following describes the Splunk Common Information Model (CIM) add-on?

- A. The CIM add-on uses machine learning to normalize data.
- B. The CIM add-on contains dashboards that show how to map data.
- C. The CIM add-on is automatically installed in a Splunk environment.
- D. The CIM add-on contains data models to help you normalize data.

答案：D

解題說明：
The Splunk Common Information Model (CIM) add-on is a Splunk app that contains data models to help you normalize data from different sources and formats. The CIM add-on defines a common and consistent way of naming and categorizing fields and events in Splunk. This makes it easier to correlate and analyze data across different domains, such as network, security, web, etc. The CIM add-on does not use machine learning to normalize data, but rather relies on predefined field names and values. The CIM add-on does not contain dashboards that show how to map data, but rather provides documentation and examples on how to use the data models. The CIM add-on is not automatically installed in a Splunk environment, but rather needs to be downloaded and installed from Splunkbase.

問題 #241
Which syntax will find events where the values for the 1 field match the values for the Renewal-MonthYear field?

- A. | where 10yearAnnerversary='Renewal-MonthYear'

- B. | where '10yearAnnerversary'='Renewal-MonthYear'
- C. | where 10yearAnnerversary=Renewal-MonthYear
- D. | where '10yearAnnerversary=Renewal-MonthYear

答案：C

解題說明：
The where command is used to filter the search results based on an expression that evaluates to true or false. The where command can compare two fields, two values, or a field and a value. The where command can also use functions, operators, and wildcards to create complex expressions1.
The syntax for the where command is:
| where <expression>
The expression can be a comparison, a calculation, a logical operation, or a combination of these. The expression must evaluate to true or false for each event.
To compare two fields with the where command, you need to use the field names without any quotation marks. For example, if you want to find events where the values for the 10yearAnnerversary field match the values for the Renewal-MonthYear field, you can use the following syntax:
| where 10yearAnnerversary=Renewal-MonthYear
This will return only the events where the two fields have the same value.
The other options are not correct because they use quotation marks around the field names, which will cause the where command to interpret them as string values instead of field names. For example, if you use:
| where '10yearAnnerversary'='Renewal-MonthYear'
This will return no events because there are no events where the string value '10yearAnnerversary' is equal to the string value 'Renewal-MonthYear'.
Explanation:
The correct answer is
