100-160덤프샘플 다운 & 100-160최신 시험대비자료

PassTIP에서는 IT인증 시험에 대비한 퍼펙트한Cisco 인증100-160덤프를 제공해드립니다. 시험공부할 시간이 충족하지 않은 분들은PassTIP에서 제공해드리는Cisco 인증100-160덤프로 시험준비를 하시면 자격증 취득이 쉬워집니다. 덤프를 구매하시면 일년무료 업데이트서비스도 받을수 있습니다.

Cisco 100-160 시험요강:

주제	소개
주제 1	Endpoint Security Concepts:This section of the exam measures the skills of an Endpoint Security Specialist and includes securing individual devices, understanding protections such as antivirus, patching, and access control at the endpoint level, essential for maintaining device integrity.
주제 2	Vulnerability Assessment and Risk Management: This section of the exam measures the skills of a Risk Management Analyst and entails identifying and assessing vulnerabilities, understanding risk priorities, and applying mitigation strategies that help manage threats proactively within an organization's systems
주제 3	Incident Handling: This section of the exam measures the skills of an Incident Responder and centers on recognizing security incidents, responding appropriately, and containing threats—forming the essential foundation of incident response procedures.

주제 4	• Basic Network Security Concepts: This section of the exam measures the skills of a Network Defender and focuses on understanding network-level protections, including firewalls, VPNs, and intrusion detection prevention systems, providing insight into how threats are mitigated within network environments.
주제 5	• Essential Security Principles: This section of the exam measures the skills of a Cybersecurity Technician and covers foundational cybersecurity concepts such as the CIA triad (confidentiality, integrity, availability), along with basic threat types and vulnerabilities, laying the conceptual groundwork for understanding how to protect information systems.

최신 Cisco CCST 100-160 무료 샘플문제 (Q29-Q34):

질문 # 29

Which of the following scanning techniques is considered non-intrusive?

- A. Network mapping
- B. Vulnerability scanning
- C. Penetration testing
- D. Port scanning

정답: A

설명:

Network mapping is a non-intrusive scanning technique used to discover and gather information about network devices, their IP addresses, and their interconnections. It focuses on identifying the network topology and does not involve actively examining the vulnerabilities or attempting to exploit them. Network mapping is primarily used for network documentation, planning, and troubleshooting purposes.

질문 # 30

Which of the following is a key element of management in cybersecurity?

- A. Firewall configuration
- B. Network vulnerability scanning
- C. Intrusion detection system deployment
- D. Incident response planning

정답: D

설명:

Incident response planning is a critical component of management in cybersecurity. It involves developing a detailed plan to identify, respond to, and recover from security incidents. This ensures that any security breaches or attacks are handled effectively, minimizing the impact on the organization's systems and data.

질문 # 31

Which of the following is an important step during the containment phase of incident handling?

- A. Notifying law enforcement agencies
- B. Implementing temporary workarounds to mitigate the impact
- C. Identifying the root cause of the incident
- D. Preserving evidence for forensic investigation

정답: B

설명:

Implementing temporary workarounds to mitigate the impact is an important step during the containment phase of incident handling. This step aims to limit the further spread or damage caused by the incident while the root cause is being investigated and fully addressed. While notifying law enforcement, preserving evidence, and identifying the root cause are all important, the immediate

focus should be on minimizing the impact of the incident.

질문 # 32

What is the primary function of a server in a network infrastructure?

- A. Detect and prevent intrusions
- B. Filter incoming and outgoing traffic
- C. Store and manage files
- D. Monitor network traffic

정답: C

설명:

A server is a computer or system that is dedicated to serving the needs of other computers (clients) on a network. A primary function of a server is to store and manage files, applications, and other resources that can be accessed by clients over the network.

질문 # 33

What is the primary characteristic of an Advanced Persistent Threat (APT) compared to traditional attacks?

- A. APTs are primarily aimed at causing immediate damage to systems
- B. APTs are random and indiscriminate in their targets
- C. APTs involve persistent and prolonged attacks on specific targets
- D. APTs are easily detectable by conventional security measures

정답: C

설명:

The primary characteristic of an APT is its persistent and prolonged nature. Unlike traditional attacks, which may be brief and target multiple entities, APTs specifically focus on a particular target for an extended period of time. This allows the attackers to gather more information and potentially cause significant damage.

질문 # 34
