Drupal-Site-Builder Schulungsmaterialien & Drupal-Site-Builder Dumps Prüfung & Drupal-Site-Builder Studienguide

Haben Sie die Schulungsunterlagen zur Acquia Drupal-Site-Builder Zertifizierungsprüfung aus unserem PrüfungFrage, werden Sie den Schlüssel für das Bestehen der Acquia Drupal-Site-Builder Zertifizierungsprüfung gewinnen, der Ihnen bessere Entwicklung im IT-Bereich gewährleisten kann. Das Alles bedürft Ihres Vertrauens: Sie müssen auf PrüfungFrage vertrauen und Sie müssen zudem auf die Schulungsunterlagen zur Acquia Drupal-Site-Builder Zertifizierungsprüfung vertrauen. Inhalt unserer Lehrmaterialien ist absolut echt und zuversichtlich. Darüber hinaus beträgt unsere Bestehensrate der Acquia Drupal-Site-Builder Zertifizierungsprüfung 100%.

Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Drupal-Site-Builder Prüfungsfragen mit Lösungen (Q44-Q49):

44. Frage

You have a Corporate site where all traffic is anonymous. On the site, you have been getting thousands of user registrations every day. You notice that most of the registrations are spam.

What will you do to prevent this?

- A. Set the personal contact form for new users to disabled, and set email verification to use the personal contact form method.

- B. Set "Who can register accounts" to "Administrators only," and assign the task of new account creation to site admins.
- C. Add user/password in your .htaccess, so that only people who know the credentials can access your site and create an account.
- D. Set "Who can register accounts" to "Visitors," and check "Enable password strength indicator."

Antwort: B

Begründung:

For a corporate site where public visitors do not need self-service accounts, the correct Drupal site-building solution is to disable visitor registration. Drupal's official User Guide for Configuring User Account Settings says to go to Configuration > People > Account settings and, under Registration and cancellation, select

"Administrators only" as the people with permission to register user accounts. This turns off public account creation and is the standard Drupal method for stopping spam registrations on sites that do not need open sign-up.

The other choices do not match Drupal's documented account-management approach. Option B still allows visitors to create accounts, so it does not prevent spam registrations; a password strength indicator is unrelated to blocking bot sign-ups. Option A would protect the entire site at the web-server level, which is not the intended Drupal account-registration setting and would block all anonymous access, contradicting the site's normal public use. Option D refers to unrelated contact-form behavior and does not control account creation.

Drupal's account settings documentation specifically identifies "Administrators only" as the way to stop visitor registration, making C the verified answer.

45. Frage

What is meant by headless Drupal?

(Select 2 options)

- A. Applying security updates automatically to Drupal installation
- B. Just another phrase for "decoupled Drupal"
- C. Exposing Drupal content to other systems such as native applications.
- D. Publishing content automatically in Drupal

Antwort: B,C

Begründung:

In Drupal's official documentation, headless Drupal is described as decoupled Drupal. The documentation explains that decoupled, or headless, Drupal separates the backend content management part of Drupal from the frontend presentation layer. In this architecture, Drupal is used as a content repository and content API, while the frontend can be built with other technologies such as JavaScript frameworks or consumed by other clients. This directly supports option C. Drupal documentation also explains that this architecture allows Drupal content to be exposed to other systems and applications through APIs such as JSON:API or REST. That means Drupal can provide content to websites, mobile apps, kiosks, or other digital channels, which matches option B. The purpose of headless Drupal is therefore not automatic updates or automatic publishing, so options A and D are not correct. So, according to Drupal 10 and Drupal 11 documentation, the correct understanding is that headless Drupal means decoupled Drupal and involves exposing Drupal-managed content to external systems or applications through APIs.

46. Frage

You have created a new Comment type, but when you try to add a comment field to a Content type, you can't select your new Comment type.

- A. Custom comment types can only be added to default Content types.
- B. You need to clear the site caches to see the new option.
- C. "Allow comments" is not checked in the Content type settings.
- D. In your new Comment type, you didn't select "Content" as the Target entity type.

Antwort: D

Begründung:

In Drupal, a comment field can only use comment types that are configured for the same target entity type as the entity you are attaching comments to. When you add a comment field to a Content type (node), Drupal expects a comment type whose Target entity type is Content. If the new comment type was created with another target entity type, such as custom block or user, it will not appear as a selectable option when adding that comment field to a content type. This is consistent with Drupal core's comment

architecture and field behavior.

The other choices do not match Drupal's documented behavior. "Allow comments" is not a separate prerequisite checkbox that controls whether a comment type appears; instead, comments are enabled by adding a comment field to the content type. Drupal documentation for administering comment settings confirms that comment capability is added from Manage fields by adding or reusing a comment field. There is also no documented requirement that custom comment types work only on default content types, and cache clearing is not described as the fix for this selection issue.

47. Frage

You have installed a contributed module called "Sample Module" that looks like it will be a great fit for the business case you are trying to solve. However, upon closer examination, it looks like the module only supplies a drush command; it does not have an admin interface.

As a site builder with no command-line experience, this will not work for you! You need a web user interface to use this module. How should you request a web UI in the module's issue queue?

- A. Create a "Plan" issue for the module with the subject line, "Create web UI for Sample Module."
- **B. Create a "Feature Request" issue for the module with the subject line, "Create web UI for Sample Module."**
- C. Create a "Bug Report" issue for the module with the subject line, "Create web UI for Sample Module."
- D. Create a "Feature Request" issue for the module with the subject line, "URGENT: Module Broken!!!Needs UI."

Antwort: B

Begründung:

Drupal's issue queue guidelines clearly distinguish between different issue types. A Bug Report is used when existing functionality is broken or not working as intended. In this case, the module is functioning correctly- it simply does not provide a UI-so option A is incorrect.

A Feature Request is the correct issue type when asking for new functionality or enhancements to an existing module. Requesting a web-based UI for a module that currently only provides Drush commands is a classic example of a feature enhancement, making option C correct.

Option B ("Plan") is typically used for outlining larger initiatives or coordinated development efforts, not for requesting a specific feature. Option D is incorrect because Drupal issue queue best practices emphasize clear, descriptive, and professional issue titles, avoiding urgency or misleading wording like "Module Broken!!!" when it is not actually broken.

Drupal.org documentation encourages contributors to categorize issues properly and write clear, concise summaries so maintainers and the community can effectively review and respond. Therefore, submitting a Feature Request with a clear subject line is the correct and recommended approach.

48. Frage

You are using a contributed module named Lotus. You have read the module's documentation and ensured it is configured correctly. However, certain functionality of the module is not working as intended.

How should you find help?

(Select 2 options)

- A. Create a comment of type "support request" on the module's project page.
- B. Email the module's maintainer and ask for help.
- **C. Search for answers and ask questions in the module's issue queue on drupal.org.**
- **D. Ask questions in the drupal-support channel on IRC or in the support channel on Drupal Slack group.**

Antwort: C,D

Begründung:

Drupal 10 and Drupal 11 documentation strongly recommend using community-supported channels for troubleshooting contributed modules. The primary and most appropriate place to seek help is the module's issue queue on drupal.org, where users can search for existing issues, report bugs, and ask questions. This ensures transparency, allows maintainers and contributors to track problems, and benefits the wider community. Therefore, option A is correct.

Additionally, Drupal has active community communication platforms such as Drupal Slack and IRC channels (like #drupal-support), where developers and site builders collaborate and provide real-time assistance. These are officially recognized community support channels, making option B correct.

Option C is incorrect because Drupal project pages do not use general comments for support; instead, all discussions should happen in the issue queue. Option D is discouraged because directly emailing maintainers bypasses the public support process and is not aligned with Drupal community best practices.

Thus, the correct and recommended ways to find help are using the issue queue and community support channels.
