NLN Nursing Entrance Exam (Math, Science and Verbal) Sample Questions (Q18-Q23):

NEW QUESTION # 18

In the human male, which of these structures produces sperm cells?

- A. Prostate gland
- **B. Testes**
- C. Cowper's glands

- D. Epididymis

Answer: B

Explanation:

Sperm cells are produced in the testes, specifically within tightly coiled structures called seminiferous tubules.

The process of sperm production is known as spermatogenesis and requires hormones such as testosterone.

Cowper's glands and the prostate gland do not produce sperm; instead, they secrete fluids that contribute to semen and help protect and nourish sperm cells. The epididymis is responsible for sperm maturation and storage but does not produce sperm. The NEX Science exam often tests reproductive anatomy by asking students to distinguish between sperm production, maturation, and transport. Understanding the specific role of each male reproductive structure is essential. Since only the testes are responsible for the formation of sperm cells, option C is the correct answer.

NEW QUESTION # 19

Reading Comprehension

Passage:

Dehydration can occur when fluid loss exceeds fluid intake. Symptoms may include dizziness, dry mouth, and decreased urine output. Older adults are particularly vulnerable to dehydration.

Which group is identified as being at higher risk?

- A. Children
- B. Athletes
- C. Older adults
- D. Teenagers

Answer: C

Explanation:

The passage clearly states that older adults are particularly vulnerable to dehydration. Option C is directly supported. The other groups are not mentioned. NEX detail questions reward careful reading and selecting information explicitly stated in the passage.

NEW QUESTION # 20

Which neuron carries the impulse from a receptor to the central nervous system?

- A. Motor
- B. Sensory
- C. Efferent
- D. Association

Answer: B

Explanation:

Sensory neurons, also known as afferent neurons, carry impulses from sensory receptors to the central nervous system (brain and spinal cord). These neurons transmit information such as touch, temperature, pain, and pressure. Motor (efferent) neurons carry impulses away from the CNS to muscles or glands. Association neurons, also called interneurons, connect sensory and motor neurons within the CNS. The NEX Science exam frequently tests neural pathways and directional flow of nerve impulses, making sensory neurons the correct answer for signals traveling from receptors to the CNS.

NEW QUESTION # 21

Word Knowledge

The word "monitor" most nearly means:

- A. Repair
- B. Supervise or observe
- C. Replace
- D. Ignore

Answer: B

Explanation:

Monitor means to watch, observe, or check regularly. Option A best matches this meaning. Monitoring is a common healthcare term.

NEW QUESTION # 22

The graph below displays survey results.

Data in the graph indicate that

- A. total cigarette usage increased in 2023.
- B. underage nicotine vaping increased in 2023.
- **C. vaping is more prevalent than using cigarettes in the underage population.**
- D. vaping is more prevalent than using cigarettes in the total population.

Answer: C

Explanation:

This question tests the ability to analyze and compare data presented in a bar graph. The graph shows both cigarette usage and nicotine vaping for total populations and underage populations in two different years.

When focusing on the underage population, the bars for nicotine vaping are clearly higher than those for cigarette usage in both years shown. This indicates that vaping is more prevalent than cigarette smoking among underage individuals. The graph does not show an increase in total cigarette usage, eliminating option B: While vaping is high overall, the clearest and most directly supported conclusion is specific to the underage population. The NEX Science exam frequently includes questions requiring students to identify the most accurate conclusion supported by data rather than making assumptions beyond what is shown.

Therefore, option A is the best answer.
