When preparing to take the Cisco Certified Support Technician (CCST) Cybersecurity (100-160) exam dumps, knowing where to start can be a little frustrating, but with Cisco 100-160 practice questions, you will feel fully prepared. Using our Cisco 100-160 practice test CertkingdomPDF, you can prepare for the increased difficulty on 100-160 Exam day. Plus, we have various question types and difficulty levels so that you can tailor your Cisco 100-160 exam dumps preparation to your requirements.

Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q280-Q285):

NEW QUESTION # 280

Which of the following is a feature of cloud computing?

- A. Hardware provisioning
- **B. Data encryption**
- C. Physical server maintenance
- D. On-premises hosting

Answer: B

Explanation:

Option 1: Incorrect. On-premises hosting refers to hosting applications and data on local servers within an organization's physical infrastructure. It is not a feature of cloud computing.

Option 2: Incorrect. Hardware provisioning is the process of setting up and configuring the physical infrastructure required to run applications and store data. While this is an important aspect of cloud computing, it is not a specific feature of cloud computing.

Option 3: Correct. Data encryption is a feature of cloud computing that ensures the security and confidentiality of data stored and transmitted within the cloud. It protects sensitive information from unauthorized access.

Option 4: Incorrect. Physical server maintenance involves activities such as hardware repairs, upgrades, and maintenance tasks associated with physical servers. While these tasks are necessary for managing an on-premises infrastructure, they are not specific features of cloud computing.

NEW QUESTION # 281

Which of the following is a unique identifier assigned to a network interface card (NIC)?

- A. Subnet mask
- B. Default gateway
- C. IP address
- **D. MAC address**

Answer: D

Explanation:

A Media Access Control (MAC) address is a unique identifier assigned to a network interface card (NIC) by the manufacturer. It is a 48-bit address typically represented as six groups of two hexadecimal digits separated by colons or hyphens. MAC addresses are used for communication at the data link layer of the network stack.

NEW QUESTION # 282

Which of the following best describes the purpose of the MITRE ATT&CK; Matrix?

- A. To analyze the impact of cyber threats on critical infrastructure
- **B. To provide a standardized way to categorize cyber threat tactics and techniques**
- C. To map vulnerabilities and exposures in computer systems
- D. To track the global distribution of cyber threat actors

Answer: B

Explanation:

The MITRE ATT&CK; Matrix provides a comprehensive framework that categorizes various tactics, techniques, and procedures (TTPs) used by cyber threat actors. It enables organizations to understand how different attackers operate and helps in developing effective cybersecurity defenses and detection mechanisms.

NEW QUESTION # 283

An administrator wants to ensure that any files downloaded from the internet are automatically scanned for malicious code before execution. Which security control should be implemented?

- A. Patch management system
- B. Host-based firewall
- C. Anti-malware with real-time protection
- D. VPN client

Answer: C

Explanation:

According to the CCST Cybersecurity course, anti-malware solutions with real-time protection scan files as they are downloaded or opened, blocking malicious code before it runs.

"Real-time protection automatically inspects files, applications, and scripts as they are accessed or downloaded, preventing execution of malicious code." (CCST Cybersecurity, Endpoint Security Concepts, Malware Protection section, Cisco Networking Academy)

NEW QUESTION # 284

What is the main purpose of port scanning in cybersecurity?

- A. To gather information about potential targets on the internet
- B. To detect intrusions and prevent unauthorized access
- C. To identify open ports and services running on a target system
- D. To exploit vulnerabilities in the target system

Answer: C

Explanation:

Port scanning is a technique used to identify open ports and services running on a target system. By scanning the ports, a cybersecurity professional can gather valuable information about the target, such as the services and protocols in use, which can help in identifying potential vulnerabilities and securing the system.

NEW QUESTION # 285

.....

As the professional provider of exam related materials in IT certification test, CertkingdomPDF has been devoted to provide all candidates with the most excellent questions and answers and has helped countless people pass the exam. CertkingdomPDF Cisco 100-160 study guide can make you gain confidence and help you take the test with ease. You can pass 100-160 Certification test on a moment's notice by CertkingdomPDF exam dumps. Isn't it amazing? But it is true. As long as you use our products, CertkingdomPDF will let you see a miracle.
