

Oracle 1z1-076 Practice Test - Pass Exam And Boost Your Career

Oracle 1Z0-076 Exam Prep Made Easy: The Benefits of Using Practice Tests

2026 Latest CramPDF 1z1-076 PDF Dumps and 1z1-076 Exam Engine Free Share: <https://drive.google.com/open?id=13dEvE2wTCB-dU8WZu0EaUMJjYvIE93xX>

The Oracle Database 19c: Data Guard Administration 1z1-076 certification offers a great opportunity for beginners and professionals to demonstrate their skills and abilities to perform a certain task. For the complete, comprehensive, for Oracle Database 19c: Data Guard Administration 1z1-076 Exam Preparation you can get assistance from Oracle Database 19c: Data Guard Administration Exam Questions.

In order to make sure your whole experience of buying our 1z1-076 prep guide more comfortable, our company will provide all people with 24 hours online service. The experts and professors from our company designed the online service system for all customers. If you decide to buy the 1z1-076 study braindumps from our company, we can make sure that you will have the opportunity to enjoy the best online service provided by our excellent online workers. If you purchasing the 1z1-076 Test Practice files designed by many experts and professors from our company, we can promise that our online workers are going to serve you day and night during your learning period. If you have any questions about our study materials, you can send an email to us, and then the online workers from our company will help you solve your problem in the shortest time. So do not hesitate to buy our 1z1-076 prep guide.

>> New 1z1-076 Exam Camp <<

100% Pass Quiz Marvelous Oracle New 1z1-076 Exam Camp

Having a 1z1-076 certificate is a task that every newcomer rookie dreams about. With it, you can not only become the elite in the workplace in the eyes of leaders, but also get a quick promotion and a raise, and maybe you have the opportunity to move to a better business. Whether you are a student or an office worker, you can be satisfied here, and you will never regret if you choose 1z1-076 Exam Torrent. For we have successfully help tens of thousands of candidates achieve their aims. We believe you won't be the exception to pass the 1z1-076 exam and get the dreaming 1z1-076 certification.

Oracle 1z1-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.
Topic 2	<ul style="list-style-type: none">• Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.

Topic 3	<ul style="list-style-type: none"> Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.
Topic 4	<ul style="list-style-type: none"> Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.
Topic 5	<ul style="list-style-type: none"> Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.
Topic 6	<ul style="list-style-type: none"> Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.
Topic 8	<ul style="list-style-type: none"> Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.
Topic 9	<ul style="list-style-type: none"> Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.
Topic 10	<ul style="list-style-type: none"> Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.
Topic 11	<ul style="list-style-type: none"> Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.

Oracle Database 19c: Data Guard Administration Sample Questions (Q98-Q103):

NEW QUESTION # 98

Which three statements are true..... With no Oracle Streams or Goldengate configured?

- A. They are required on a logical standby for real-time apply
- B. They are required only for synchronous redo transport
- C. It is recommended to have them on the...
- D. They are required on a physical standby for real-time apply.
- E. Only standby databases can write redo....
- F. The LGWR process writes to them on

Answer: A,D,F

Explanation:

C; The LGWR (Log Writer) process is responsible for writing redo entries from the redo log buffer to the online redo log files on the primary database. This is a fundamental process in the Oracle Database architecture, ensuring that all changes made to the database are captured for purposes such as recovery, replication, and high availability.

D; Real-time apply on a logical standby database requires standby redo log files. The standby redo log files are used to store redo data received from the primary database before it is applied to the logical standby database.

This enables the logical standby to apply changes as they are received, without waiting for the current redo log file to be archived.

E: Similarly, on a physical standby database, standby redo log files are used for real-time apply. They store redo data from the primary database, allowing the physical standby to apply redo data concurrently as it is received, rather than waiting for redo log files to be archived. This capability is crucial for maintaining a physical standby database that is closely synchronized with the primary database with minimal lag.

These functionalities are integral to Oracle Data Guard configurations and are not dependent on Oracle Streams or Oracle GoldenGate, which are separate technologies for data replication and integration.

NEW QUESTION # 99

You must design an Oracle Data Guard configuration for a DSS database that meets these permanent requirements:

1. Creating and maintaining bitmap indexes should not impact the performance of the primary database.
 2. Creating and maintaining materialized views should not impact the performance of the primary database.
- Additionally, there are these requirements, only one of which is ever done at any one time:

1. It should be possible to apply designated patches with a minimum amount of downtime.
 2. Upgrading to a new database release should be performed with the least possible amount of downtime.
 3. New application software releases should be tested against an exact and up-to-date replica of the primary database.
- Which configuration meets these requirements with the fewest of databases?

- A. a primary database with two physical standby databases
- B. a primary database with two logical standby databases
- C. A primary database with one logical and one physical standby database
- **D. a primary database with one logical standby database**
- E. a primary database with one physical standby database

Answer: D

Explanation:

* Logical standby databases allow the execution of DDL and DML operations, which makes them suitable for maintaining bitmap indexes and materialized views without affecting the performance of the primary database .

* Logical standby databases can be used for performing rolling upgrades and patching with minimum downtime, meeting another requirement .

* They also enable the testing of new application software releases against an up-to-date replica of the primary database, fulfilling the last requirement.

Other configurations involving physical standby databases or combinations of logical and physical standby databases might not meet all the specified requirements as efficiently or with the same level of performance isolation for the primary database.

NEW QUESTION # 100

Examine the fast-start failover configuration:

- A. If South_Sales develops a problem and cannot be the target of a failover, the broker automatically changes the fast-start failover target to one of the other candidate targets.
- **B. The observer is running.**
- **C. The observer will initiate a failover when the primary database is unable to produce local archived redo log files.**
- D. You must disable fast-start failover first to change the fast-start failover target to East sales.
- **E. A failover may occur if the observer has lost connectivity to the primary database, even if the Fast-Start Failover target standby database has a good connection to the primary database**

Answer: B,C,E

NEW QUESTION # 101

Which four requirements can be met by deploying a logical standby database?

- **A. It can be used to create additional tables.**
- **B. It can be used for Real Application Testing without affecting the disaster recovery capabilities.**
- C. It can be used to create additional schemas.
- D. It must have the same physical structure as the primary database.
- **E. Support for workloads requiring additional materialized views.**
- **F. Support for workloads requiring additional indexes.**
- G. It must provide a disaster-recovery solution that protects all data with capability of performing switchovers and failovers.

Answer: A,B,E,F

Explanation:

A logical standby database is part of Oracle Data Guard and allows the standby database to be open for read-write operations, providing additional flexibility. The requirements met by a logical standby database include:

* Support for workloads requiring additional materialized views (A): Logical standby databases can support materialized views, allowing for complex data summarization and reporting workloads.

- * It can be used to create additional tables (C): Unlike physical standby databases, logical standby databases allow for the creation of additional tables that do not exist in the primary database, enabling custom workloads and reporting.
 - * It can be used for Real Application Testing without affecting the disaster recovery capabilities (E): Logical standby databases can be used to test application changes, patches, and upgrades while still maintaining their role as part of the disaster recovery strategy.
 - * Support for workloads requiring additional indexes (F): Logical standby databases allow for the creation of additional indexes to optimize query performance for reporting and analytical workloads.

NEW QUESTION # 102

You created the PRODSBY1 physical standby database for the PROD primary database using gsql and RMAN.

You are planning to create a Data Guard Broker configuration. You execute the command:

Which three statements are true regarding the execution of the command?

- A. The command will execute successfully only if the DG_BROKER_START initialization parameter is set to TRUE for the PROD database instance.
- B. The command will execute successfully only if Oracle Net connectivity to the PROD and PRODSBY1 database instances are defined on the primary host.
- C. The PRODSBY1 standby database is automatically added to the configuration if DG_BROKER_START is TRUE for PRODSBY1.
- D. The command will execute successfully only if Oracle Net connectivity to the PROD database instance is defined on the primary host.
- E. The Data Guard Broker configuration files are automatically created in the destinations specified by the DG_BROKER_CONFIG_FILEn initialization parameters on the primary database.
- F. The PRODSBY1 standby database is automatically added to the configuration if Oracle Net connectivity to the PRODSBY1 database instance is defined on the primary host.

Answer: A,D,E

Explanation:

The command executed (CREATE CONFIGURATION 'DGConfig' AS PRIMARY DATABASE IS 'PROD' CONNECT IDENTIFIER IS PROD;) is used to create a Data Guard Broker configuration named 'DGConfig'. The successful execution of this command depends on several conditions:

* A: The DG_BROKER_START parameter must be set to TRUE on the primary database to start the Data Guard Broker processes. Without the broker processes running, the configuration cannot be created.

* D: Oracle Net connectivity to the PROD database instance must be established on the primary host. This is because the Data Guard Broker requires network accessibility to communicate with the primary database and manage the configuration.

* E: When the configuration is created, the Data Guard Broker configuration files are indeed automatically created in the locations specified by the DG_BROKER_CONFIG_FILEn parameters on the primary database.

It's important to note that the command will not automatically add the PRODSBY1 standby database to the configuration (thus B and C are not correct), and there is no requirement for the standby database to have Oracle Net connectivity defined on the primary host for the execution of this command (making F incorrect as well).

References: This information can be validated in Oracle's Data Guard Broker documentation, which outlines the requirements for setting up and managing a Data Guard configuration using the Data Guard Broker.

NEW QUESTION # 103

.....

CramPDF offers authentic 1z1-076 questions with accurate answers in their Oracle Database 19c: Data Guard Administration Exam practice questions file. These exam questions are designed to enhance your understanding of the concepts and improve your knowledge of the 1z1-076 Quiz dumps. By using these questions, you can identify your weak areas and focus on them, thereby strengthening your preparation for the Oracle Database 19c: Data Guard Administration (1z1-076) Exam.
