Fortinet FCP - Azure Cloud Security 7.4 Administrator Sample Questions (Q75-Q80):

NEW QUESTION # 75
What is the primary purpose of enabling the IP forwarding setting on FortiGate in Azure?

- A. To block incoming and outgoing network traffic
- B. To enable the VM to act as a router
- C. To prevent source and destination checks on network interfaces
- D. To disable network security group (NSG) rules

Answer: B

Explanation:
Enabling the IP forwarding setting on FortiGate (or any NVA) in Azure allows the VM to route traffic that is not destined for itself, effectively enabling it to act as a router or firewall. This is essential for scenarios where FortiGate inspects or filters traffic between subnets or from on-premises to Azure.

What is the primary benefit of configuring HA with FortiGate in an Azure environment?
Response:

NEW QUESTION # 79
How are the configurations synchronized between two FortiGate VMs in an active-passive HA with SDN connector failover deployed from the Azure marketplace?

- A. By configuring FGSP on the primary
- B. Using system autoscaling during a failover
- C. Using unicast FGCP
- D. An Azure function distributes the configuration files

Answer: C

Explanation:
In an active-passive HA deployment of FortiGate VMs in Azure using the Marketplace template, configuration synchronization is handled via unicast FortiGate Clustering Protocol (FGCP). FGCP allows the primary unit to replicate its configuration and session information to the secondary unit, ensuring seamless failover.
