Whether you are at home or out of home, you can study our 1z0-1075-25 test torrent. You don't have to worry about time since you have other things to do, because under the guidance of our 1z0-1075-25 study tool, you only need about 20 to 30 hours to prepare for the exam. Sincere and Thoughtful Service Our goal is to increase customer's satisfaction and always put customers in the first place. As for us, the customer is God. We provide you with 24-hour online service for our 1z0-1075-25 Study Tool. If you have any questions, please send us an e-mail. We will promptly provide feedback to you and we sincerely help you to solve the problem.

The objective of Pass4cram is to provide Oracle Manufacturing Cloud 2025 Implementation Professional (1z0-1075-25) exam applicants with 1z0-1075-25 actual questions they require to expeditiously crack the Oracle 1z0-1075-25 Exam Dumps. Customers can be sure they are obtaining the updated 1z0-1075-25 PDF Questions, customizable practice exams, with 24/7 customer assistance. Purchase Oracle 1z0-1075-25 study material right away to get started on the road to success in the real exam.

1z0-1075-25 Exam Vce | Exam 1z0-1075-25 Material

Today we use computers & internet every day, high-technology products bring our life convenient and benefits. Many positions have great demand. Pass4cram releases valid 1z0-1075-25 dumps torrent files to help workers go through exams and get certifications so that many dreaming young people can enter into this field and even get a good position. Oracle 1z0-1075-25 Dumps Torrent files is the leading position in this field and can be your NO.1 choice.

Oracle Manufacturing Cloud 2025 Implementation Professional Sample Questions (Q14-Q19):

NEW QUESTION # 14

A Production Operator is reporting an orderless transaction and realizes that the item has to be scrapped because some specifications were not met during one of the operations of the item. While performing orderless transactions, the operator notices that the Scrap and Return from Scrap transaction types are not available to transact.

Which privilege does the operator need to have to use these two transaction types?

- A. Print Work Order Traveler
- B. Return from Scrap Transactions
- C. Report Material Transactions
- **D. Report Scrap Transactions.**

Answer: D

Explanation:

In Oracle Manufacturing Cloud, for a Production Operator to perform scrap and return from scrap transactions during an orderless transaction, they must have the Report Scrap Transactions privilege. This allows them to properly record and reverse scrap transactions for any items that fail to meet specifications.

* Report Scrap Transactions grants the operator the necessary permissions to use both the Scrap and Return from Scrap transaction types. Without this privilege, these transaction types will not be available in the system.

Incorrect options:

* Return from Scrap Transactions (B) is not the correct privilege; the privilege to both scrap and return from scrap is covered under Report Scrap Transactions.

* Print Work Order Traveler (C) and Report Material Transactions (D) are unrelated to scrap transaction reporting.

Oracle Cloud documentation on Privileges for Orderless Transactions describes the permissions required for handling scrap and return transactions.

NEW QUESTION # 15

A Plant Manager bought several machines for their ABC manufacturing plant. The plant is set up with a separate cost element set, ABC, in Manufacturing Cloud.

How must the Plant Manager configure these machines so that they are costed to the work order for which operations are performed on them?

- **A. Set up the machines with a cost element type of "Resource " by selecting Cost Element Set ABC.**
- B. Set up the machines with a cost element type of "Resource " by selecting Cost Element Set Common.
- C. Set up the machines with a cost element type of "Overhead " by selecting Cost Element Set Common.
- D. Set up the machines with a cost element type of "Overhead " by selecting Cost Element Set ABC.

Answer: A

Explanation:

When configuring machines that will be used in production operations and will incur costs associated with work orders, the correct setup for these machines involves:

* Setting up the machines as a "Resource " in the cost element set ABC : This allows the machines to be directly associated with the work orders for which they are used, ensuring that their costs are appropriately tracked and charged to the work order. Resources include equipment, labor, and other direct costs involved in production.

Incorrect options:

* "Overhead " (B, D) : Overhead costs typically represent indirect costs, not the direct usage of machines in production.

* Cost Element Set Common (A) : Since the plant uses a separate cost element set (ABC), the machines must be assigned to this specific set, not the Common cost element set.

Oracle Manufacturing Cloud documentation on Cost Element Setup for resources and overheads outlines how machines and other resources are configured for costing purposes.

NEW QUESTION # 16

A Manufacturing Engineer in a plant is creating an alternate manufacturing process for an item using its existing work definitions. After copying from the existing work definition, WD1, to the alternate work definition, WD2, the engineer finds that the operation items were not copied in the alternate manufacturing process WD2.

What is the reason for this?

- A. Start Date was not populated in the new WD2 during creation.
- B. Production Priority was not populated in the new WD2 during creation.
- C. Item and Structure Name in the existing WD1 were retained in the new WD2 during creation.
- **D. Item and Structure Name were changed in the new WD2 during creation.**

Answer: D

Explanation:

When creating an alternate work definition (WD2) by copying from an existing one (WD1), if the Item and Structure Name were changed during the creation of WD2, the operation items would not be copied. This is because operation items are tied to specific item structures. Changing the structure results in a disconnect between the original operation items and the new work definition.

* Item and Structure Name are critical in ensuring that the operation items (components and materials) are transferred when copying work definitions. If these names are changed, the system does not assume the same items should be used.

Oracle Manufacturing Cloud documentation explains that maintaining consistency in the Item and Structure Name is key when copying work definitions to ensure all operation items are carried over.

NEW QUESTION # 17

Which three entities must you set up in Oracle Manufacturing Cloud to create a work definition for an item that will be manufactured in-house?

- A. Production line
- **B. Operations**
- **C. Resources**
- D. Manufacturing lead time
- **E. Operation items**

Answer: B,C,E

Explanation:

To create a work definition for an in-house manufactured item in Oracle Manufacturing Cloud, the following entities must be set up:

* Resources : Resources such as machines, labor, or tools are required to define what is needed to execute each operation.

* Operations : These represent the steps in the manufacturing process. Each operation can have multiple resources and associated work instructions.

* Operation Items : These are the items consumed or used during the operation. They include the components and materials needed for production.

While Production Line (C) and Manufacturing Lead Time (E) are important for scheduling and capacity planning, they are not mandatory for creating a basic work definition.

Oracle Cloud documentation on "Work Definitions " outlines the essential entities for setting up work definitions, focusing on resources, operations, and operation items for effective manufacturing.

NEW QUESTION # 18

Two work definitions are created in the application: one for Engine Finished Good and the other for Pallet Finished Good. The Engine Finished Good item should have Pallet Finished Good as one of its components.

How can you establish the relationship between the Pallet and Engine work definitions?

- A. The two work definitions can be tied through Project or Selban numbers.
- B. Assign a higher priority to the work definition created for Engine and a lower one to the work definition for Pallet.
- C. Work definition versions can be used to tie the work orders.
- **D. Create a subinventory to serve as the completion subinventory for yielding Pallet, and then use the same subinventory to serve as the supply subinventory of Pallet in the work definition created for Engine.**

Answer: D

Explanation:

To establish a relationship between the work definitions of Engine Finished Good and Pallet Finished Good, you can create a common subinventory. This subinventory will serve as the completion subinventory for the Pallet Finished Good and the supply subinventory for the Engine Finished Good. This ensures that the Pallet Finished Good is completed in one process and is then available as a component for the Engine Finished Good.

* Subinventory Linking : Using a common subinventory ties the output from one work definition as an input to another. The Pallet becomes an inventory item that is consumed in the production of the Engine.

Oracle Manufacturing Cloud ' s documentation on work definitions and inventory setups explains how subinventories are used to link different stages of production.

NEW QUESTION # 19

.....

Although the Oracle 1z0-1075-25 exam prep is of great importance, you do not need to be over concerned about it. With scientific review and arrangement from professional experts as your backup, and the most accurate and high quality content of our Oracle 1z0-1075-25 Study Materials, you will cope with it like a piece of cake. So Oracle 1z0-1075-25 learning questions will be your indispensable practice materials during your way to success.

1z0-1075-25 Exam Vce: https://www.pass4cram.com/1z0-1075-25_free-download.html

Oracle 1z0-1075-25 Reliable Dumps Free You will regret if you do not choose our study materials, With the Pass4cram Oracle Manufacturing Cloud 2025 Implementation Professional (1z0-1075-25) exam questions you will get to understand Oracle 1z0-1075-25 exam structure, difficulty level, and time constraints, Oracle 1z0-1075-25 Reliable Dumps Free Are you really surfing to save your money as well as future, First of all, we have the best and most first-class operating system, in addition, we also solemnly assure users that users can receive the information from the 1z0-1075-25 learning material within 5-10 minutes after their payment.

Prospective candidates often ask about the required complexity of the 1z0-1075-25 submitted design, You can also make the clip black and white, with controls for choosing which color channel to base the effect on;

Quick Tips to Pass your Exam with Oracle 1z0-1075-25 Questions

You will regret if you do not choose our study materials, With the Pass4cram Oracle Manufacturing Cloud 2025 Implementation Professional (1z0-1075-25) exam questions you will get to understand Oracle 1z0-1075-25 exam structure, difficulty level, and time constraints.

Are you really surfing to save your money as well Exam 1z0-1075-25 Simulator Free as future, First of all, we have the best and most first-class operating system, in addition, we also solemnly assure users that users can receive the information from the 1z0-1075-25 learning material within 5-10 minutes after their payment.

The Selling Oracle Manufacturing Cloud 2025 Implementation Professional (1z0-1075-25) practice test material for Pass4cram are there to download after your purchase.
