Hot Advanced HPE6-A88 Testing Engine – The Best Valid Exam Answers for HPE6-A88 - Efficient HPE6-A88 Flexible Learning Mode

Today, the prevailing belief is that knowledge is stepping-stone to success. By discarding outmoded beliefs, our HPE6-A88 exam materials are update with the requirements of the authentic exam. To embrace your expectations and improve your value during your review, you can take joy and challenge the HPE6-A88 Exam may bring you by the help of our HPE6-A88 guide braindumps. You will be surprised by the high-effective of our HPE6-A88 study guide!

HPE Aruba Networking ClearPass Exam Sample Questions (Q64-Q69):

NEW QUESTION # 64

A company has deployed ClearPass Onboard to manage their BYOD environment. They want to ensure that each device connecting to the network has a unique identity for auditing purposes.

Additionally, they are considering integrating ClearPass with Aruba Central Client Insights to enhance profiling accuracy using AI and ML. Which feature of ClearPass Onboard directly supports the company's need for unique device identities?

- A. ClearPass Onboard assigns a unique certificate to each device that goes through the Onboard process.
- B. ClearPass Onboard provides endpoint compliance and control capabilities.
- C. ClearPass Onboard supports anti-virus and firewall checks for device compliance.

Answer: A

Explanation:

ClearPass Onboard issues a unique device certificate to each endpoint during the onboarding process. This certificate-based identity uniquely identifies every device on the network, enabling precise auditing, strong authentication, and long-term device tracking independent of user credentials.

NEW QUESTION # 65

A company uses ClearPass to manage network access and has integrated it with an external server that supports HTTP API access. A new policy requires that any device managed by the EMM server must receive a specific configuration update upon network authentication. How can ClearPass facilitate this requirement?

- A. ClearPass can send an HTTP message to the EMM server, triggering the server to push the required configuration update to the device.
- B. ClearPass can directly update the device configuration without involving the EMM server.
- C. ClearPass can only notify the network administrator to manually update the device configuration.

Answer: A

Explanation:

ClearPass can integrate with external systems through HTTP-based APIs. During authentication, ClearPass can trigger an HTTP request to the EMM server, which then initiates the required configuration update on the managed device based on the defined policy.

NEW QUESTION # 66

A network administrator is troubleshooting connectivity issues between clients and the ClearPass server. They suspect that the firewall configuration might be causing the problem. Which action should the administrator take to ensure the OnGuard agent can properly communicate with the ClearPass server?

- A. Open TCP Port 6658 for the heartbeat and TCP port 443 for agent communication.
- B. Open TCP Port 80 for the heartbeat and TCP port 22 for agent communication.
- C. Open UDP Port 53 for the heartbeat and TCP port 443 for agent communication.

Answer: A

Explanation:

Communication between the OnGuard agent and ClearPass requires specific firewall ports to be open. TCP Port 443 (HTTPS) is used for the initial control channel and software updates. TCP Port 6658 is the proprietary port used for the agent's "heartbeat," which provides real-time health updates and session monitoring. If either port is blocked, the agent will appear offline or fail to report its posture status.

NEW QUESTION # 67

An organization hosting a large conference expects over 500 guests to require network access. They want to streamline the process and reduce the burden on their internal staff. Which feature should they implement to achieve this goal?

- A. Guest access with self-registration
- B. Basic guest access with internal account creation
- C. Guest access with pre-shared keys

Answer: A

Explanation:

For high-density events like conferences, manual account creation by IT staff is unscalable. Self-registration allows guests to navigate to a portal, enter their own details, and receive credentials without any administrative intervention. This offloads the entire management burden from the internal staff while still allowing the organization to collect visitor data and enforce terms of service.

NEW QUESTION # 68

When configuring the role settings by Mobility Gateway in ClearPass, a network engineer notices that the elements required for the role are reusable. What is the primary benefit of this reusability feature?

- A. It provides automatic updates to all roles when one role is changed.
- B. It enables the use of default system settings without customization.
- **C. It allows the engineer to create and apply a single definition to multiple roles, saving time and reducing errors.**

Answer: C

Explanation:

ClearPass is built on an object-oriented configuration model. Elements such as Role Mappings, Enforcement Profiles, and Service Rules are modular. This reusability means an engineer can define a

"Corporate-User" enforcement profile once and apply it to a dozen different services (Wireless, Wired, VPN).

This ensures policy consistency across the organization, significantly reduces administrative overhead, and minimizes the risk of configuration errors.

NEW QUESTION # 69

.....

Our HPE6-A88 test torrent was designed by a lot of experts in different area. You will never worry about the quality and pass rate of our HPE6-A88 study materials, it has been helped thousands of candidates pass their HPE6-A88 exam successful and helped them find a good job. If you choose our HPE6-A88 study torrent, we can promise that you will not miss any focus about your HPE6-A88 exam. It is proved that our HPE6-A88 learning prep has the high pass rate of 99% to 100%, you will pass the HPE6-A88 exam easily with it.
