VMware Advanced VMware Cloud Foundation 9.0 Operation Sample Questions (Q67-Q72):

NEW QUESTION # 67

A Cloud Admin wants to configure "Workload Optimization" to automatically balance workloads across clusters based on software licensing costs. Specifically, "Oracle" VMs must strictly stay on "Cluster-A" (which is licensed), and "SQL" VMs must stay on "Cluster-B".

Which VCF Operations feature is designed to enforce these license-based placement constraints?

- A. The "Cost Drivers" configuration screen.
- B. The "Consolidate" Operational Intent.
- C. Business Intent (within Workload Optimization). The admin configures tag-based placement rules (e.g., Tag 'Oracle' must be placed on Cluster 'Cluster-A') which VCF Operations enforces during any rebalancing action.
- D. vSphere DRS Affinity Rules created manually in vCenter.

Answer: C

NEW QUESTION # 68

A capacity planner needs to model the impact of adding 200 VMs, but does not want to manually type the specifications (vCPU, RAM, Disk) for every single VM. The planner has a spreadsheet containing the VM list. Which method allows the planner to bulk-import this demand profile into the What-If Analysis?

- A. Use the "vRealize Orchestrator" plugin to inject the data.
- **B. Use the "Import" button in the Workload Planning screen to upload a CSV file containing the VM definitions (Name, vCPU, RAM, Storage).**
- C. It is not possible; profiles must be defined manually or by selecting existing VMs as templates.
- D. Copy and paste the cells into the "VM Name" search box.

Answer: B

NEW QUESTION # 69

A Cloud Admin is reviewing the "High Availability" (HA) status of a single-site VCF Operations cluster.

Cluster Status

Nodes: 4 (Node-A, Node-B, Node-C, Node-D)

HA State: Enabled

Roles:

Node-A: Master

Node-B: Master Replica

Node-C: Data

Node-D: Data

Event

Node-C (Data Node) suffers a catastrophic hardware failure and goes offline.

What is the operational impact on the cluster?

- **A. The cluster remains online. Metrics previously mastered on Node-C are served from their redundant copies on the other nodes. However, the cluster is now in a "Degraded" state.**
- B. The cluster goes into "Read-Only" mode until Node-C is restored from backup.
- C. The entire cluster goes offline because the loss of a Data node breaks the GemFire shard integrity.
- D. Node-B automatically promotes itself to Master, and Node-A reboots to become a Data node.

Answer: A

NEW QUESTION # 70

A Solution Architect is designing a "Compliance Archive" solution for logs. The requirement is to retain logs for 7 years on low-cost cold storage.

Design Choice

VCF Operations for Logs -> Archiving Enabled -> NFS Share

Operational Question

"How does an auditor search for a log entry from 3 years ago stored in the Archive?" What is the correct procedure?

- A. The auditor must use a text editor (like Notepad++) to open the archived files on the NFS share.
- B. The data is automatically moved to "Glacier" and queried via SQL.
- C. The auditor can search the "Archive" scope directly from the Interactive Analytics page; the query will just be slower.
- **D. The archived data (raw compressed blobs) must be manually re-imported or "Hydrated" back into a VCF Operations for Logs instance (either the production one or a temporary recovery instance) to be indexed and searchable.**

Answer: D

NEW QUESTION # 71

When configuring a new integration, the administrator sees a field labeled "Collector / Group".

Scenario

Target: High-Security vCenter (Isolated Network)

Collector Options:

1. Default Collector Group (Shared)
 2. Cloud-Proxy-Secure-01 (Dedicated to Isolated Net)
- What is the impact of selecting "Cloud-Proxy-Secure-01" for this integration?

- A. It automatically encrypts the vCenter database.
- B. It restricts the integration to only collect data from objects named "Secure".
- **C. It pins the data collection traffic for this specific vCenter to flow exclusively through Cloud-Proxy- Secure-01, ensuring connectivity rules (Isolated Net -> Proxy -> Analytics) are respected.**
- D. It forces the VCF Operations Analytics nodes to bypass the proxy and talk directly to the vCenter.

Answer: C
