2026 New 1z0-1042-24 Braindumps Pdf - Realistic Oracle Cloud Infrastructure 2024 Application Integration Professional Visual Cert Exam Pass Guaranteed

Life is beset with all different obstacles that are not easily overcome. For instance, 1z0-1042-24 exams may be insurmountable barriers for the majority of population. However, with the help of our exam test, exams are no longer problems for you. The reason why our 1z0-1042-24 Training Materials outweigh other study prep can be attributed to three aspects, namely free renewal in one year, immediate download after payment and simulation for the software version.

In recent years, our 1z0-1042-24 Test Torrent has been well received and have reached 99% pass rate with all our dedication. As a powerful tool for a lot of workers to walk forward a higher self-improvement, our 1z0-1042-24 certification training continue to pursue our passion for advanced performance and human-centric technology. As a matter of fact, our company takes account of every client's difficulties with fitting solutions. As long as you need help, we will offer instant support to deal with any of your problems about our Oracle Cloud Infrastructure 2024 Application Integration Professional guide torrent. Any time is available; our responsible staff will be pleased to answer your questions.

Pass 1z0-1042-24 Exam with High-quality New 1z0-1042-24 Braindumps Pdf by Actual4Exams

Desktop Oracle Cloud Infrastructure 2024 Application Integration Professional (1z0-1042-24) practice test software is the first format available at Actual4Exams. This format can be easily used on Windows PCs and laptops. The Oracle 1z0-1042-24 practice exam software works without an internet connection, with the exception of license verification. One of the excellent features of this Oracle Cloud Infrastructure 2024 Application Integration Professional (1z0-1042-24) desktop-based practice test software is that it includes multiple mock tests that have Oracle 1z0-1042-24 practice questions identical to the actual exam, providing users with a chance to get Oracle Cloud Infrastructure 2024 Application Integration Professional (1z0-1042-24) real exam experience before even attempting it.

Oracle 1z0-1042-24 Exam Syllabus Topics:

Topic	Details
Topic 1	• Using OIC Connections & Adapters: Candidates must demonstrate their ability to create and configure OIC connections, including trigger and invoke connections. They should be familiar with the Connectivity Agent, which facilitates on-premises connectivity to OIC services.
Topic 2	• Creating Orchestrated Integrations: This part of the exam evaluates the candidate's skills in creating and managing orchestrated integrations using OIC. Candidates should be able to manage OIC lookups, use the OIC Data Mapper, and incorporate custom JavaScript libraries into their integrations.
Topic 3	• Getting Started with OIC Integrations: This section tests the ability of IT professionals and integration specialists to understand the fundamental components and concepts of Oracle Integration Cloud (OIC). Candidates are expected to describe the key features of OIC integration and explain core integration concepts.
Topic 4	• Testing, Monitoring, and Troubleshooting Integrations: This section assesses candidates abilities in testing, monitoring, and troubleshooting integrations within the OIC.
Topic 5	• Creating Scheduled Integrations: In this section of the exam, candidates are evaluated based on their skills in managing scheduled integrations. This includes converting scheduled integrations to app-driven integrations and understanding the scheduling options within the OIC.

Oracle Cloud Infrastructure 2024 Application Integration Professional Sample Questions (Q17-Q22):

NEW QUESTION # 17
Which two are ways Business Rules can be modeled in Process Cloud Service (PCS)?

- A. Using BPM Rule Editor
- B. Using Oracle Business Rules Editor
- C. Using OIC Rule Editor
- D. Using Decision Model Editor

Answer: B,D

Explanation:
Business Rules in PCS can be modeled using the Oracle Business Rules Editor and the Decision Model Editor. These tools provide flexibility in defining and managing business rules.

NEW QUESTION # 18
There are use cases in which you need to perform an advanced XSLT task that you cannot perform in the Oracle Integration Cloud (OIC) data mapper. To perform the advanced mapping tasks, you decide to use an external XSLT mapper and then import the .xsl file back to your integration.
Which is NOT a valid consideration when handling this use case?

- A. The exported archive must be imported into an Oracle Service Bus project in JDeveloper.
- B. You must export the entire integration that contains one or more .xsl files.

- C. The exported archive file can include a map file that is largely complete in content or a map file that is empty of content.
- D. Once the advanced mapping is complete, you must import the entire integration that contains the updated .xsl files.

Answer: A

Explanation:
There is no need to import the archive into an Oracle Service Bus project. The focus is on modifying the XSLT mapping in OIC.

NEW QUESTION # 19
In Oracle Integration (OIC), you are working on an integration that uses a REST trigger, which will require authentication. You need to ensure that only authorized clients can access the integration. Which approach should you use?

- A. Enable Cross-Origin Resource Sharing (CORS) and set an API key in the REST Adapter configuration.
- B. Configure the REST Adapter to use the Basic Authentication or OAuth 2.0 security policy.
- C. Encrypt the payload using a custom encryption algorithm and provide the decryption key to authorized clients.
- D. Set up an IP whitelist in the OIC instance, allowing only specific IP addresses to access the integration.

Answer: B

Explanation:
Comprehensive and Detailed Explanation:
Securing a REST trigger in OIC is critical to restrict access to authorized clients. Let's dive into each option with exhaustive detail:
* Option A: Configure the REST Adapter to use the Basic Authentication or OAuth 2.0 security policy.
* Correct (Answer):This is the standard, built-in approach in OIC for securing REST triggers. In the REST Adapter configuration wizard, you can selectBasic Authentication(username
/password) orOAuth 2.0(token-based), both widely supported and secure. For example, a client sending a POST request to
/trigger_endpoint would include an Authorization: Basic <base64 creds> header or an Authorization: Bearer <token> header. This ensures only clients with valid credentials or tokens can invoke the integration, aligning with REST security best practices.
OAuth 2.0, in particular, supports advanced scenarios like client credentials or authorization code flows, offering scalability and flexibility.
* Option B: Enable Cross-Origin Resource Sharing (CORS) and set an API key in the REST Adapter configuration.
* Incorrect:CORS controls browser-based cross-origin requests (e.g., allowing example.com to call OIC), not authentication. It's about access control for web clients, not securing the endpoint itself. API keys aren't a native security policy in the OIC REST Adapter trigger configuration- while you could custom-implement them in the payload or headers, it's not a standard option like Basic Auth or OAuth. This makes B insufficient for ensuring authorized access.
* Option C: Set up an IP whitelist in the OIC instance, allowing only specific IP addresses to access the integration.
* Incorrect:IP whitelisting is possible at the OCI network level (e.g., via Virtual Cloud Network rules), but it's not a feature of the REST Adapter configuration nor specific to an integration. It's a blunt tool-clients with dynamic IPs (e.g., mobile apps) would fail, and it doesn't scale well for diverse authorized users. It also lacks the granularity of credential-based authentication.
* Option D: Encrypt the payload using a custom encryption algorithm and provide the decryption key to authorized clients.
* Incorrect:Payload encryption protects data in transit (complementing HTTPS), not endpoint access. OIC doesn't natively support custom encryption algorithms in the REST Adapter, and distributing decryption keys manually is impractical and insecure compared to established standards like OAuth. This approach addresses confidentiality, not authorization.
Why A is the answer:OIC's REST Adapter provides robust, out-of-the-box security policies (Basic Auth and OAuth 2.0) that directly enforce client authorization, making it the most practical and secure choice.
Edge Case:If a client uses a revoked OAuth token, OIC rejects the request, ensuring real-timeaccess control- something IP whitelisting or custom encryption can't match.
Use Case Example:A CRM system triggers an OIC integration with an OAuth token to update ERP data, ensuring only authorized CRM instances succeed.
Potential Pitfall:Misconfiguring OAuth (e.g., wrong client ID) could lock out legitimate clients, requiring careful setup.

NEW QUESTION # 20
Which is NOT an available option when configuring an Oracle ERP Cloud adapter to use in an Oracle Integration (OIC) integration?

- A. Extract Bulk Data from ERP Cloud
- B. Receive Business Events raised within ERP Cloud
- C. Send Files to ERP Cloud
- D. Query, Create, Update, or Delete Information

Answer: B

Explanation:
Comprehensive and Detailed Explanation:
ERP Adapter:
* A:False-Trigger role, not Invoke option.

NEW QUESTION # 21
Oracle Integration Cloud (OIC) provides the file server feature which is an embedded SFTP server that enables organizations to focus on building integrations without the need to host and maintain a separate SFTP server. Which statement is NOT valid concerning the OIC File Server feature?

- A. Any external SFTP client can access file server if an OIC administrator has configured specific folder access permissions for that client.
- B. The OIC File Server is a feature that is disabled by default in a newly provisioned OIC instance.
- C. Access to the OIC File Server management REST APIs is limited to users with the ServiceAdministrator role.
- D. To write files to the OIC File Server from an internal OIC integration flow, a REST adapter connection resource must be used.

Answer: D

Explanation:
Comprehensive and Detailed Explanation:
OIC File Server is an embedded SFTP solution:
* A:True-admins configure access for external clients.
* B:False-internal flows use File Adapter, not REST, to write files.
* C:True-ServiceAdministrator role restricts API access.

NEW QUESTION # 22

......

We often regard learning as a torture. Actually, learning also can become a pleasant process. With the development of technology, learning methods also take place great changes. Take our 1z0-1042-24 practice material for example. All of your study can be completed on your computers because we have developed a kind of software which includes all the knowledge of the 1z0-1042-24 exam. The simulated and interactive learning environment of our test engine will greatly arouse your learning interests. You will never feel boring and humdrum. Your strong motivation will help you learn effectively. If you are tired of memorizing the dull knowledge point, our 1z0-1042-24 Test Engine will assist you find the pleasure of learning. Time is priceless. Learn something when you are still young. Then you will not regret when you are growing older.
