

PassExamDumps Juniper JN0-351 Desktop Practice Test Software Features

P.S. Free & New JN0-351 dumps are available on Google Drive shared by PassExamDumps: <https://drive.google.com/open?id=1tsPciM16UJeQsu7vZFH2QotVqDgJLaPR>

Our JN0-351 study quiz boosts high quality and we provide the wonderful service to the client. We boost the top-ranking expert team which compiles our JN0-351 guide prep elaborately and check whether there is the update every day and if there is the update the system will send the update automatically to the client. The content of our JN0-351 Preparation questions is easy to be mastered and seizes the focus to use the least amount of answers and questions to convey the most important information.

Juniper JN0-351 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> IS-IS: Aspiring Juniper networking professionals enhance their understanding of IS-IS routing protocols. This topic equips candidates with the knowledge to configure and monitor IS-IS systems, addressing specific exam challenges and practical applications.
Topic 2	<ul style="list-style-type: none"> OSPF: The concepts and operational details of OSPF are explored, providing tools for routing efficiency. Configuration and troubleshooting mastery ensure readiness for both the exam and complex enterprise environments.
Topic 3	<ul style="list-style-type: none"> High Availability: This topic covers the importance and application of high availability within Junos OS environments. Knowledge in configuring and managing these components is critical for ensuring robust and uninterrupted network operations, aligning with exam expectations.
Topic 4	<ul style="list-style-type: none"> Protocol Independent Routing: An essential domain for understanding routing components outside protocol dependencies, this topic enhances expertise in configuring, monitoring, and troubleshooting critical elements.

Hot Visual JN0-351 Cert Exam | Efficient Exam JN0-351 Outline: Enterprise Routing and Switching, Specialist (JNCIS-ENT) 100% Pass

Our company is a professional certificate exam materials provider, we have occupied in this field for years, and we have rich experiences. JN0-351 exam cram is edited by professional experts, and they are quite familiar with the exam center, and therefore, the quality can be guaranteed. In addition, JN0-351 training materials contain both questions and answers, and it also has certain quantity, and it's enough for you to pass the exam. In order to strengthen your confidence for JN0-351 Training Materials, we are pass guarantee and money back guarantee, if you fail to pass the exam we will give you full refund, and no other questions will be asked.

Juniper Enterprise Routing and Switching, Specialist (JNCIS-ENT) Sample Questions (Q99-Q104):

NEW QUESTION # 99

You are deploying a trunk port with multiple VLANs. In this scenario, which statement is true about the native VLAN?

- A. The native VLAN must be the default VLAN on the port.
- B. The native VLAN is automatically configured through DHCP.
- C. The native VLAN is the highest tagged VLAN ID on the port.
- **D. The native VLAN is an untagged VLAN ID on the port.**

Answer: D

NEW QUESTION # 100

You are using tunnels in your network. It is important that the routes be specific enough to ensure that the tunnels are established. You need to prevent a route that is new to the network from being used. In this scenario, which type of route should be used?

- A. multicast
- B. anycast
- C. aggregate
- **D. static**

Answer: D

NEW QUESTION # 101

Which two statements are true about the default VLAN on Juniper switches? (Choose two.)

- **A. The default VLAN is set to a VLAN ID of 1 by default**
- B. The default VLAN ID is not assigned to any interface.
- C. The default VLAN ID is not visible.
- **D. The default VLAN ID can be changed.**

Answer: A,D

Explanation:

Explanation

On Juniper switches, the default VLAN is set to a VLAN ID of 1 by default¹². This means that all interfaces on the switch are members of VLAN 1 until they are specifically assigned to another VLAN¹². Therefore, option A is correct.

The default VLAN ID can be changed¹². This allows network administrators to configure the switch to use a different VLAN as the default, if necessary¹². Therefore, option D is correct.

NEW QUESTION # 102

You are using OSPF to advertise the subnets that are used by the Denver and Dallas offices. The routers that are directly connected to the Dallas and Denver subnets are not advertising the connected subnets.

Referring to the exhibit, which two statements are correct? (Choose two.)

- A. Enable the passive option on the OSPF interfaces that are connected to the Dallas and Denver subnets.
- B. Configure and apply a routing policy that redistributes the connected Dallas and Denver subnets.
- C. Create static routes on the switches using the local vMX router's loopback interface for the next hop.
- D. Configure and apply a routing policy that redistributes the Dallas and Denver subnets using Type 5 LSAs.

Answer: A,B

Explanation:

The routers that are directly connected to the Dallas and Denver subnets are not advertising the connected subnets. This can be resolved by redistributing the connected subnets into OSPF.

Option C suggests to configure and apply a routing policy that redistributes the connected Dallas and Denver subnets. This is correct because redistribution allows routes from one routing protocol to be communicated to another, and in this case, it allows the connected subnets to be advertised through OSPF.

Option D suggests enabling the passive option on the OSPF interfaces that are connected to the Dallas and Denver subnets. This is also correct because in OSPF, a passive interface is an interface that belongs to the OSPF router, but does not send OSPF Hello packets. It's typically used on an interface that you don't want to use for OSPF adjacencies, but you still want to advertise its IP address. Therefore, enabling passive interface can help in advertising the Dallas and Denver subnets.

NEW QUESTION # 103

R1 has a BGP session with a router that has a peer autonomous system number of 64501. It is exchanging routes, and is advertising those routes to IBGP peers. The downstream IBGP peers, however, cannot pass traffic to the advertised networks.

Referring to the exhibit, which configuration change must occur to solve this problem?

- A. The BGP group ext-64501 must include the import next-hop-selfpolicy.
- B. The BGP group ext-64501 must include the export next-hop-selfpolicy.
- C. The BGP group int-64503 must include the import next-hop-selfpolicy.
- D. The BGP group int-64503 must include the export next-hop-selfpolicy.

Answer: D

NEW QUESTION # 104

.....

If you are occupied with your study or work and have little time to prepare for your exam, then you can choose us. JN0-351 training materials are edited by skilled professional experts, and therefore they are high-quality. You just need to spend about 48 to 72 hours on study, you can pass the exam. We are pass guarantee and money back guarantee for JN0-351 Exam Materials, if you fail to pass the exam, you just need to send us your failure scanned to us, we will give you full refund, and no other questions will be asked.

Online and offline service is available, if you have any questions for JN0-351 exam materials, don't hesitate to consult us.
