As the rapid development of the world economy and intense competition in the international, the leading status of knowledge-based economy is established progressively. A lot of people are in pursuit of a good job, a DP-300 certification, and a higher standard of life. It is very important for us to keep pace with the changeable world and update our knowledge if we want to get a good job, a higher standard of life and so on. First, we need to get a good DP-300 Quiz prep. Because we only pass DP-300 exam and get a certificate, we can have the chance to get a decent job and make more money.

Another benefit of earning the DP-300 Certification is the increased job opportunities and higher salaries that come with it. According to Microsoft, individuals who hold this certification can expect to earn an average salary of \$116,591 per year.

2026 Answers DP-300 Free Free PDF | Latest DP-300 Interactive Course: Administering Relational Databases on Microsoft Azure

We have a lot of regular customers for a long-term cooperation now since they have understood how useful and effective our DP-300 actual exam is. In order to let you have a general idea about the shining points of our DP-300 training materials, we provide the free demos on our website for you to free download. You can check the information and test the functions by the three kinds of the free demos according to our three versions of the DP-300 Exam Questions.

Microsoft Administering Relational Databases on Microsoft Azure Sample Questions (Q181-Q186):

NEW QUESTION # 181

You have an on-premises Microsoft SQL Server 2016 instance that hosts a database named db1. You have an Azure subscription that contains an Azure SQL managed instance named Mil.

You plan to perform an online migration of db1 to Mil by using Azure Database Migration Service.

You need to create the backups for the migration. The solution must minimize the number of backup files created.

Which type of backups should you create, and how should you store the backups? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Backup type:

- Full only
- Full only
- Full and differential
- Full and transaction log
- Transaction log only

To store the backups:

 Append each backup to a separate file. Append all the backups to a single file. Append each backup to a separate file. Write each backup to a separate file.**Answer:**

Explanation:

Answer Area**Microsoft**

Backup type:

 Full only Full only Full and differential Full and transaction log Transaction log only

To store the backups:

 Append each backup to a separate file. Append all the backups to a single file. Append each backup to a separate file. Write each backup to a separate file.

Explanation:

Answer Area**Microsoft**Backup type: Full onlyTo store the backups: Append each backup to a separate file.**NEW QUESTION # 182**

Hotspot Question

You have SQL Server on an Azure virtual machine that contains a database named DB1.

The database reports a CHECKSUM error.

You need to recover the database.

How should you complete the statements? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

```
USE master;
```

```
ALTER DATABASE [DB1] SET
```

```
GO
```

OFFLINE
ONLINE
SINGLE_USER
TRUSTWORTHY

```
WITH ROLLBACK IMMEDIATE;
```

```
DBCC CHECKDB ('DB1',
```

```
GO
```

NOINDEX
PHYSICAL_ONLY
REPAIR_ALLOW_DATA_LOSS
REPAIR_FAST

```
WITH NO_INFOMSGS;
```

```
ALTER DATABASE [DB1] SET
```

```
GO
```

MULTI_USER;
ONLINE;
OPEN;
TRUSTWORTHY;

Answer:

Explanation:

Answer Area

```
USE master;
```

```
ALTER DATABASE [DB1] SET
```

```
GO
```

OFFLINE
ONLINE
SINGLE_USER
TRUSTWORTHY

```
WITH ROLLBACK IMMEDIATE;
```

```
DBCC CHECKDB ('DB1',
```

```
GO
```

NOINDEX
PHYSICAL_ONLY
REPAIR_ALLOW_DATA_LOSS
REPAIR_FAST

```
WITH NO_INFOMSGS;
```

```
ALTER DATABASE [DB1] SET
```

```
GO
```

MULTI_USER;
ONLINE;
OPEN;
TRUSTWORTHY;

Explanation:

Box 1: SINGLE_USER

The specified database must be in single-user mode to use one of the following repair options.

Box 2: REPAIR_ALLOW_DATA_LOSS

REPAIR_ALLOW_DATA_LOSS tries to repair all reported errors. These repairs can cause some data loss.

Note: The REPAIR_ALLOW_DATA_LOSS option is a supported feature but it may not always be the best option for bringing a database to a physically consistent state. If successful, the REPAIR_ALLOW_DATA_LOSS option may result in some data loss. In fact, it may result in more data lost than if a user were to restore the database from the last known good backup.

Incorrect Answers:

REPAIR_FAST

Maintains syntax for backward compatibility only. No repair actions are performed.

Box 3: MULTI_USER

All users that have the appropriate permissions to connect to the database are allowed.

NEW QUESTION # 183

Hotspot Question

You have an Azure subscription.

You need to deploy two virtual machines named VM1 and VM2 that will host Microsoft SQL Server instances. The solution must meet the following requirements:

- VM1 must provide the highest I/O throughput-to-vCore ratio.
- VM2 must provide the highest memory-to-vCore ratio.

Which series should you select for each virtual machine? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area 

VM1: 

VM2: 

Answer:

Explanation:

Answer Area

VM1: 

VM2: 

Explanation:

Box 1: Ebds5-series

VM1 must provide the highest I/O throughput-to-vCore ratio.

Consider the following VM series based on your SQL Server workloads:

High I/O throughput-to-vCore ratio: The Mbsv3 and Mbdsv3-series VMs offer the highest throughput-to-vCore ratio of any VM series in any cloud. The Ebds5-series VMs offer the second highest throughput-to-vCore ratio in Azure. If you don't know the I/O requirements for your SQL Server workload, the Ebds5-series VMs is the one most likely to meet your needs.

Box 2: Mv2 series

VM2 must provide the highest memory-to-vCore ratio.

The Azure Virtual Machine Mv2 series offers the highest memory-to-vCore ratio among Azure VM sizes. These VMs are specifically designed for memory-intensive workloads like in-memory databases and large-scale analytics, providing up to 12TB of memory with a substantial number of vCPUs.

<https://learn.microsoft.com/en-us/azure/virtual-machines/mv2-series>

NEW QUESTION # 184

HOTSPOT

You need to implement the monitoring of SalesSQLDb1. The solution must meet the technical requirements.

How should you collect and stream metrics? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Collect metrics from:

- The database only
- The elastic pool and the database
- The elastic pool only
- The server, the elastic pool, and the database

Stream metrics to:

- Azure Event Hubs
- Azure Log Analytics
- Azure Storage

Answer:

Explanation:

Answer Area

Collect metrics from:

- The database only
- The elastic pool and the database
- The elastic pool only
- The server, the elastic pool, and the database

Stream metrics to:

- Azure Event Hubs
- Azure Log Analytics
- Azure Storage

Explanation:

Box 1: The server, the elastic pool, and the database

Scenario:

SalesSQLDb1 is in an elastic pool named SalesSQLDb1Pool.

Litware technical requirements include: all SQL Server and Azure SQL Database metrics related to CPU and storage usage and limits must be analyzed by using Azure built-in functionality.

Box 2: Azure Event hubs

Scenario: Migrate ManufacturingSQLDb1 to the Azure virtual machine platform

Event hubs are able to handle custom metrics.

Incorrect Answers:

Azure Log Analytics

Azure metric and log data are sent to Azure Monitor Logs, previously known as Azure Log Analytics, directly by Azure. Azure SQL Analytics is a cloud only monitoring solution supporting streaming of diagnostics telemetry for all of your Azure SQL databases.

However, because Azure SQL Analytics does not use agents to connect to Azure Monitor, it does not support monitoring of SQL Server hosted on-premises or in virtual machines.

Monitor and Optimize Operational Resources

Question Set 2

NEW QUESTION # 185

You have a database named db1.

The log for db1 contains the following entry.

```
Date 10/5/2021 10:57:08 AM
Log SQL Server (Current - 10/5/2021 11:26:00 AM)

Source spid1595
```

Message Microsoft
The transaction log for database 'db1' is full due to 'AVAILABILITY_REPLICA'

You need to ensure that db1 can process transactions.

Actions	Answer Area
Add db1 back to the availability group.	
Shrink db1.	
Shrink the transaction log file.	
Remove db1 from the availability group.	
Back up the transaction log file.	

Answer:

Explanation:

Actions	Answer Area
Add db1 back to the availability group.	
Shrink db1.	
Shrink the transaction log file.	
Remove db1 from the availability group.	
Back up the transaction log file.	

NEW QUESTION # 186

.....

It is well acknowledged that people who have a chance to participate in the simulation for the real DP-300 exam, they must have a fantastic advantage over other people to get good grade in the DP-300 exam. Now, it is so lucky for you to meet this opportunity once in a blue. We offer you the simulation test with the Software version of our DP-300 Preparation dumps in order to let you be familiar with the environment of test as soon as possible.
