SAP Certified Associate - Positioning SAP Business AI Solutions as part of SAP Business Suite Sample Questions (Q29-Q34):

NEW QUESTION # 29

A retail business wants to use AI for automating customer support while ensuring personalized customer interactions. Which SAP AI

solutions should they implement? Note: There are 3 correct answers to this question.

- A. SAP Blockchain for Business
- B. SAP AI for Customer Experience
- C. SAP AI Business Services
- D. SAP Conversational AI
- E. SAP Predictive Analytics

Answer: B,C,D

Explanation:

For a retail business seeking to automate customer support while maintaining personalized interactions, SAP provides targeted AI solutions that integrate seamlessly with customer experience workflows. The correct answers are SAP Conversational AI, SAP AI for Customer Experience, and SAP AI Business Services, as these solutions directly address automation and personalization in customer support.

SAP documentation explains: "Use Joule agents to automate case classification, proactively find answers to customer questions, and capture knowledge from resolved cases to improve sales and service quality." SAP Conversational AI, powered by Joule, leverages natural language processing to enable chatbots that handle customer inquiries efficiently, delivering personalized responses based on customer behavior and history.

SAP AI for Customer Experience, embedded in SAP Sales Cloud and SAP Commerce Cloud, supports

"personalized experiences and omnichannel engagements" by analyzing customer data to tailor interactions.

SAP AI Business Services provide reusable AI capabilities, such as natural language processing and machine learning, to "enrich customer experience across the intelligent, sustainable enterprise." The incorrect options-SAP Predictive Analytics and SAP Blockchain for Business-are not directly relevant to customer support automation or personalization. SAP Predictive Analytics focuses on forecasting, not customer interaction automation. SAP Blockchain for Business is designed for secure transactions, not customer support. SAP's case study on Miele Professional illustrates how AI in SAP Commerce Cloud and SAP Sales Cloud enhances B2B sales, reinforcing the suitability of the selected solutions for retail customer support.

NEW QUESTION # 30

(What does business AI mean? Note: There are 3 correct answers to this question.)

- A. Customer centricity
- B. Agility
- C. Technology foundation
- D. Enterprise data
- E. Processes

Answer: C,D,E

Explanation:

Comprehensive and Detailed Explanation From Exact Extract: Business AI in SAP is defined as the combination of technology foundation (the underlying AI technology), enterprise data (the business data it leverages), and processes (the business processes it enhances and automates). This holistic approach ensures AI is embedded in business contexts for relevant, reliable, and responsible outcomes, with customer centricity and agility as resulting benefits rather than core components.

Exact extracts supporting this:

"What does SAP Business AI mean? Essentially three things: The technology it is based on. The enterprise data it is trained on. The processes it runs through."learning.sap.com Enterprise data: "Grounded in customers' business data."learning.sap.com Processes: "Embed AI features across all business processes, delivering immediate value to businesses."events.sap.com "Automating processes, and enabling predictive analytics."community.sap.com Technology foundation: "The technology it is based on."learning.sap.com "These AI functionalities are designed to help businesses automate processes, gain insights from data, improve decision-making."community.sap.com Other options are incorrect because:

Option B: Customer centricity is a benefit or principle in SAP solutions (e.g., in supply chain), but not a core definitional component of business AI.

Option D: Agility is an outcome enabled by business AI, such as increasing business agility, but not part of its fundamental definition. Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: From the SAP Learning course "Discovering SAP Business AI," specifically the unit "Explaining the role of SAP Business AI," which defines business AI as the intersection of technology, data, and processes. Supported by SAP community blogs and product overviews, aligning with C_BCBAI_2502 certification for positioning AI in the SAP Business Suite.

NEW QUESTION # 31

Which SAP Business AI solutions assist in intelligent document processing?

There are 2 correct answers to this question.

Response:

- A. SAP Conversational AI
- **B. SAP AI Business Services**
- C. SAP SuccessFactors AI
- **D. SAP Intelligent Robotic Process Automation (RPA)**

Answer: B,D

NEW QUESTION # 32

Which SAP solution helps companies ensure compliance with environmental regulations? Please choose the correct answer.

- **A. SAP Environment, Health, and Safety (EHS)**
- B. SAP SuccessFactors
- C. SAP Extended Warehouse Management
- D. SAP Business Warehouse

Answer: A

Explanation:

SAP Environment, Health, and Safety (EHS) is the dedicated solution for ensuring compliance with environmental regulations, supporting organizations in managing environmental, health, and safety requirements. The correct answer is SAP Environment, Health, and Safety (EHS), as it is explicitly designed for this purpose.

SAP documentation states: "SAP Environment, Health, and Safety (SAP EHS) supports companies in managing environmental compliance, workplace safety, and sustainability initiatives. It helps organizations comply with global environmental regulations, track emissions, and implement sustainable practices." SAP EHS enables companies to monitor regulatory requirements, manage permits, and report on environmental performance, ensuring adherence to standards like carbon emissions and waste management regulations. For example, it supports "tracking and reporting environmental data" to meet compliance obligations, as seen in SAP's sustainability-focused solutions.

The incorrect options are unrelated to environmental compliance. SAP Business Warehouse is a data storage and analytics platform, not focused on regulatory compliance. SAP SuccessFactors addresses HR processes, such as recruitment and talent management. SAP Extended Warehouse Management handles logistics and inventory, not environmental regulations. SAP EHS is the only solution aligned with environmental compliance objectives.

NEW QUESTION # 33

If a company implements SAP's Business AI offerings comprehensively, all things being equal, which bottomline benefits could they expect?

There are 2 correct answers to this question.

Response:

- A. Gross profit increase: up to 3.5%
- **B. Revenue increase: up to 3.5%**
- C. Revenue increase: up to 1.4%
- **D. Gross profit increase: up to 1.4%**

Answer: B,D
