CompTIA 220-1101 Online Tests & 220-1101 Reliable Exam Book

To make preparation easier for you, Prep4SureReview has created an 220-1101 PDF format. This format follows the current content of the CompTIA 220-1101 real certification exam. The 220-1101 dumps PDF is suitable for all smart devices making it portable. As a result, there are no place and time limits on your ability to go through CompTIA 220-1101 Real Exam Questions pdf.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q619-Q624):

NEW QUESTION # 619

A technician is configuring a new CAD workstation that has four large hard drives. The workstation will be used to edit large, critical files, so the storage configuration should be both fast and redundant. Which of the following RAID levels BEST meets these requirements?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

NEW QUESTION # 620

While configuring a new network printer, a technician observes that the router cannot use a specific static IP address due to security restrictions. Which of the following should the technician use to ensure the printer always gets the same IP address even if the router is restarted?

- A. Exclusion
- B. Lease
- C. Scope
- **D. Reservation**

Answer: D

Explanation:

When configuring a network device like a printer, assigning it a static IP address ensures that it always uses the same IP address. If a static IP cannot be set due to security restrictions, the next best solution is to configure a reservation in the DHCP (Dynamic Host Configuration Protocol) server. This reservation ensures that the device (in this case, the printer) always receives the same IP address based on its MAC address, even if the router restarts.

A . Reservation: A DHCP reservation ties a specific IP address to the MAC address of a device, ensuring it always receives the same IP address from the DHCP server.

Why the other options are incorrect:

B . Scope: A DHCP scope defines the range of IP addresses that can be assigned to devices. It doesn't ensure that a specific device always gets the same IP.

C . Lease: A lease refers to the length of time a device is assigned an IP address from the DHCP server. It doesn't guarantee that the same IP will be re-assigned after the lease expires.

D . Exclusion: An exclusion in DHCP configuration excludes specific IP addresses from being assigned dynamically. This is used to prevent certain addresses from being given out but doesn't ensure a device will always get the same IP.

This topic is covered under the Networking domain of the CompTIA A+ Core 1 exam.

NEW QUESTION # 621

The IT department at an insurance brokerage needs to acquire laptops that have built-in fingerprint readers in order to create a more secure environment. Which of the following would be the MOST secure way to implement the fingerprint readers?

- A. Limit device access to departments and guest users.
- B. Give each team member a USB drive that bypasses the reader to allow guest users to log in.
- **C. Restrict device access to only the user to whom the laptop is assigned.**
- D. Grant all registered employees access to each machine.

Answer: C

Explanation:

The most secure way to implement fingerprint readers would be to restrict device access to only the user to whom the laptop is assigned. This ensures that only authorized personnel have access to the device, reducing the risk of unauthorized access and data breaches.

NEW QUESTION # 622

Hotspot Question

A customer built a computer for gaming, sourcing individual components and then assembling the system. The OS starts up, but within a few minutes the machine locks up. The customer brought the computer to a technician to diagnose the issue.

INSTRUCTIONS

Click on each component to view the specification.

Select the appropriate cause and resolution for the issue.

If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

Answer:

Explanation:

Explanation:

Overclocking too much can cause freezes, and this is a gaming computer so the user probably took it too far.

NEW QUESTION # 623

Which of the following display types is available for laptops?

- A. OLED
- B. CRT
- C. DLP
- D. Plasma

Answer: A

Explanation:

Explanation

The correct answer is A. OLED.

OLED stands for Organic Light-emitting Diode, and it is one of the three display types available for laptops, along with TN (Twisted Nematic) and IPS (In-Plane Switching) panels¹. OLED displays use organic compounds that emit light when an electric current is applied, unlike LCD displays that use a backlight to illuminate the pixels. OLED displays have several advantages over LCD displays, such as higher contrast, wider viewing angles, faster response times, and lower power consumption². However, OLED displays are also more expensive, less common, and more prone to burn-in than LCD displays².

CRT (Cathode Ray Tube), DLP (Digital Light Processing), and Plasma are not display types for laptops. CRT is an old technology that uses a vacuum tube to project an image on a phosphor screen. CRT monitors are bulky, heavy, and consume a lot of power³. DLP is a technology that uses a digital micromirror device and a light source to project an image on a screen or a wall. DLP is mainly used for projectors, not laptops⁴. Plasma is a technology that uses gas-filled cells that emit light when an electric current is applied. Plasma displays are mainly used for large-screen TVs, not laptops.
