Analytics-Admn-201퍼펙트 인증덤프 - Analytics-Admn-201유효한 덤프자료

Analytics-Admn-201시험은 영어로 출제되는 만큼 시험난이도가 높다고 볼수 있습니다. 하지만 Analytics-Admn-201덤프만 있다면 아무리 어려운 시험도 쉬워집니다. 오르지 못할 산도 정복할수 있는게 Analytics-Admn-201덤프의 우점입니다. Analytics-Admn-201덤프로 시험을 패스하여 자격증을 취득하시면 굳게 닫혔던 취업문도 자신있게 두드릴수 있습니다. Analytics-Admn-201덤프를 구매하시고 공부하시면 밝은 미래를 예약한것과 같습니다.

최신 Salesforce Administrator Analytics-Admn-201 무료샘플문제 (Q25-Q30):

질문 # 25

What command should you run to update the automatically-generated secrets that are created during a Tableau Server installation?

- A. tsm data-access caching set -r 1
- B. tsm security validate-asset-keys
- C. tsm security regenerate-internal-tokens
- D. tsm licenses refresh

정답: C

설명:

Tableau Server uses internal secrets (tokens) for secure communication between its processes (e.g., Repository, File Store). These are automatically generated during installation and can be regenerated if compromised or for security maintenance. The command to update these is:

* tsm security regenerate-internal-tokens: This regenerates the internal security tokens, ensuring all processes use the new tokens after a restart.

* Option C (tsm security regenerate-internal-tokens): Correct. This is the documented command for updating internal secrets.

* Option A (tsm data-access caching set -r 1): Incorrect. This command configures caching behavior, not security tokens.

* Option B (tsm licenses refresh): Incorrect. This refreshes license data, unrelated to internal secrets.

* Option D (tsm security validate-asset-keys): Incorrect. This validates encryption keys for assets, not internal tokens.

Reference: Tableau Server Documentation - "Regenerate Internal Tokens" (https://help.tableau.com/current/server/en-us/cli_security.htm#regenerate-internal-tokens).

질문 # 26

You need to ensure that Tableau Server requires the setup of a new administrator account the next time you attempt to log in. What should you do?

- A. Run the tsm register command
- B. Reinstall Tableau Server
- C. Run the tsm reset command
- D. Edit tabsvc.yml

정답: C

설명:

To force Tableau Server to require the setup of a new administrator account (e.g., resetting the server to an initial setup state), the `tsm reset` command is the appropriate tool. This command resets Tableau Server's administrative configuration, including the TSM administrator account, while preserving content like workbooks and data sources.

Option B (Run the `tsm reset` command): Correct. Running `tsm reset` clears the current TSM administrator credentials and configuration settings. The next time you access TSM (e.g., via the web interface or CLI), it prompts you to set up a new administrator account, mimicking the initial setup process. Command: `tsm reset --username <new-username> --password <new-password>`.

질문 # 27

What are two features of the Tableau Server user-based license? (Choose two.)

- A. Restricts the number of machine cores you can deploy
- B. Enables distinct user roles
- C. A perpetual license
- D. A subscription license

정답: B,D

설명:

Tableau Server's user-based licensing model assigns licenses to individual users (Creator, Explorer, Viewer) rather than machines or cores. Key features include:

* Subscription license: Licenses are typically subscription-based, renewed annually or monthly, aligning with Tableau's pricing model.

* Distinct user roles: It supports three roles (Creator, Explorer, Viewer), each with specific capabilities, enabling granular access control.

* Option A (A subscription license): Correct. User-based licenses are subscription-based by default.

* Option B (Enables distinct user roles): Correct. The model defines Creator, Explorer, and Viewer roles.

* Option C (Restricts the number of machine cores): Incorrect. This applies to core-based licensing, not user-based.

* Option D (A perpetual license): Incorrect. Perpetual licenses were phased out; user-based licenses are subscription-based as of recent models.

Reference: Tableau Server Documentation - "Licensing Overview" (https://help.tableau.com/current/server/en-us/license_usage.htm).

질문 # 28

What process enables you to access Tableau Services Manager (TSM) over HTTPS?

- A. Administration Agent
- B. License Manager
- C. Coordination Service
- D. Administration Controller

정답: D

설명:

TSM is Tableau Server's management layer, accessible via CLI or web UI (port 8850). HTTPS secures this access--let's identify the responsible process:

TSM Architecture:

Administration Controller: Core TSM process, running on the initial node, handling configuration, UI, and CLI commands.

HTTPS: Enabled by default on port 8850 with a self-signed certificate (configurable to custom certs).

Option B (Administration Controller): Correct.

Details: Hosts the TSM web UI (`https://<server>:8850`) and processes CLI requests. It manages the HTTPS listener, serving the interface securely.

Why: It's the central hub for TSM operations, including secure access.

질문 # 29

You attempt to delete a user who owns content on a Tableau Server. What is the result of the delete action?

- A. The user is switched to an Unlicensed site role and is NOT deleted

- B. The user and all of the user's content is deleted
- C. The user is deleted, and the user's content is reassigned to the server administrator
- D. The user is deleted, and the user's content is reassigned to the project leader

정답: A

설명:

Deleting a user in Tableau Server involves handling their owned content (workbooks, data sources) -- let's analyze the process:
Deletion Rules:

Ownership Check: Tableau prevents deletion if the user owns content to avoid orphaning it.

Action: Instead of deleting, the user's site role is set to Unlicensed, retaining their account and content ownership.

Resolution: An admin must reassign ownership (e.g., via Users > Actions > Change Owner) before deletion.

Option D (User switched to Unlicensed and NOT deleted): Correct. Details: Attempting deletion (e.g., Users > Select User > Actions > Delete) triggers a check. If content exists, the user becomes Unlicensed--still in the system but unable to log in. Why: Protects data integrity--content remains accessible for reassignment.

질문 # 30
