A DevOps engineer needs to create a local Git repository. Which of the following commands should the engineer use?

- A. `git init`
- B. `git config`
- C. `git clone`
- D. `git add`

Answer: A

Explanation:

The `git init` command initializes a new, empty Git repository in the current directory, making it the correct choice for creating a local repository.

NEW QUESTION # 30

Which of the following commands should a Linux administrator use to determine the version of a kernel module?

- A. `modinfo bluetooth`
- B. `lsmod bluetooth`
- C. `modprobe bluetooth`
- D. `depmod bluetooth`

Answer: A

The `modinfo` command displays detailed information about a kernel module, including its version, author, description, and parameters.

NEW QUESTION # 31

Customers are unable to send emails to a company's domain. When searching the naming service, they receive the following error message:

```
$ dig @ns1.mydomain.com mydomain.com mx
...
;; connection timed out; no servers could be reached
```

Which of the following is a valid reason for this error?

- A. The root name servers were configured improperly.
- B. The name entry does not exist.
- C. The queried DNS server is not responding.
- D. The `dig` command fails because of an extra `mx` at the end.

Answer: C

Explanation:

The error "connection timed out; no servers could be reached" indicates that the specified DNS server (`ns1.mydomain.com`) did not respond to the query. This points to a DNS server availability or connectivity issue, not a problem with the command syntax or record existence.

- **A. A system service that collects and stores logging data**
- B. A feature that creates crash dumps in case of kernel failure
