## Reliable NREMT EMT Test Labs | Reliable EMT Exam Guide

As a powerful tool for a lot of workers to walk forward a higher self-improvement, BraindumpsIT continue to pursue our passion for advanced performance and human-centric technology. We aimed to help some candidates who have trouble in pass their EMT exam and only need few hours can grasp all content of the exam. In recent years, our EMT Test Torrent has been well received and have reached 99% pass rate with all our candidates. If you have a try on our EMT exam questions, you will be glad about the

wonderful quality.

## NREMT Emergency Medical Technicians Exam Sample Questions (Q38-Q43):

### NEW QUESTION # 38

A 42-year-old male states, "I can't breathe" after being shot in his upper thigh. Bystanders have applied direct pressure to his thigh and the bleeding is controlled. You should first

- A. Replace the bystander's dressing with sterile gauze
- B. Apply a tourniquet
- C. Administer oxygen
- D. Assess for other life-threatening injuries

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The patient's complaint of difficulty breathing is an airway/breathing issue and takes precedence over a controlled extremity bleed. The first action is to administer oxygen and evaluate respiratory effort.

Though reassessing the wound is important, oxygenation is the priority when airway compromise or respiratory distress is present. Tourniquets are for uncontrolled bleeding, which is not the case here.

### NEW QUESTION # 39

Following an EMS call, any requests concerning protected health information should be directed to the

- A. Shift supervisor
- B. Quality assurance officer
- C. Receiving hospital
- D. Privacy officer

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Under HIPAA (Health Insurance Portability and Accountability Act), only designated personnel are authorized to handle inquiries regarding a patient's Protected Health Information (PHI). The Privacy Officer is responsible for enforcing compliance with privacy regulations and addressing PHI access requests.

Shift supervisors or hospitals do not have the legal authority to release PHI unless specifically designated.

### NEW QUESTION # 40

What characteristics of the pediatric airway are different from the adult airway?

- A. Proportionately smaller tongue and proportionately smaller occiput
- B. Proportionately larger tongue and proportionately smaller occiput
- C. Proportionately smaller tongue and proportionately larger occiput
- D. Proportionately larger tongue and proportionately larger occiput

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Compared to adults, pediatric patients have:

- \* A proportionately larger tongue, which increases the risk of airway obstruction
- \* A larger occiput, which causes natural neck flexion when lying supine, potentially occluding the airway. This anatomical difference is why EMS providers often use a shoulder roll instead of a head tilt to maintain a neutral airway in infants and toddlers.

#### NEW QUESTION # 41

Which of the following elements proves tort negligence in a court of law?

- A. False imprisonment
- B. Assault and battery
- C. **Causation**
- D. Abandonment

**Answer: C**

#### NEW QUESTION # 42

A 9-year-old patient who was injured in an MCI is brought to the treatment area with a delayed triage tag. Which of the following signs or symptoms would the EMT expect to find? Select the three correct options.

- A. Respiratory rate of 16
- B. **Follows simple commands**
- C. Palpable pulses being present
- D. **Ability to ambulate**
- E. Breathing only after opening the airway
- F. Mottled skin

**Answer: B,C,D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In pediatric START or JumpSTART triage, a "delayed" status is appropriate if the child is breathing adequately, has palpable pulses, and follows commands. The respiratory rate of 16 is normal for a 9-year-old, and being able to walk also supports the "delayed" tag.

"Mottled skin" and "breathing only after airway opening" would more likely lead to "immediate" or even "expectant" categories depending on associated symptoms.
