We are focused on offering the most comprehensive Arch-303 study materials which cover all official tests. Now, we have launched some popular Arch-303 training prep to meet your demands. And you will find the quality of the Arch-303 learning quiz is the first-class and it is very convenient to download it.

Salesforce Certified B2C Commerce Architect Sample Questions (Q60-Q65):

NEW QUESTION # 60

An integration cartridge implements communication between the B2C Commerce Storefront and a third-party service provider. The cartridge contains the localServiceRegistry code:

How does this code sample accomplish authentication to the service provider?

- A. By performing a signed SOAP Auth request using a certificate.
- B. By Issuing a Basic Auth request to the service provider.
- C. By disabling Basic Auth and executing the service authentication call.
- D. By wrapping the authentication service call with Basic Auth.

Answer: C

Explanation:

The code sample shows the creation of a service request to a third-party service provider, where the authentication method is explicitly set to 'NONE' using the line `svc.setAuthentication("NONE");`. This configuration implies that the request does not use Basic Authentication or any embedded credentials like client ID and secret in the HTTP headers for authentication purposes. Instead, it builds the authentication details into the request body, which suggests that the service expects credentials as part of the payload rather than as part of the standard authentication headers, thus effectively disabling Basic Auth for this transaction.

NEW QUESTION # 61

A client receives multiple feeds from third parties on the same SFTP location:

- * Product prices (sftp: prod/prices)
- * Stores information (sftp: prod/stores;
- * Product information (sftp: prod/catalog)
- * Categories information (sftp: prod/marketing)
- * Content (sftp: prod/marketing)

Some of the feeds are placed on sftp multiple times a day, as the information is updated in the source system.

The Architect decides to have only two jobs:

- * One that checks and downloads available feeds every hour
- * One that imports the files from Webdav once a day before the data replication, using the standards steps available in the Job Framework Which design is correct for the import Job, taking the steps scope in consideration?

- A. - three sibling flows Import steps In parallel: import products, stores, prices- fourth flow executes: import categories- last flow executes steps in sequence: reindex, Import content
- B. - four sibling flows execute steps in parallel: import products, stores, prices, content- fifth flow executes: import categories- last flow executes steps in sequence: reindex
- C. -Four sibling flows execute steps in parallel: import products, stores, price, content-last flow executes steps in sequence: import:categories, reindex
- D. - four sibling flows execute steps in parallel: import products, stores, prices, content- last flow executes steps in sequence: import categories, reindex

Answer: D

Explanation:

This design maximizes efficiency and concurrency. By having the jobs that import products, stores, prices, and content run in parallel, the system can handle multiple data streams simultaneously, reducing total processing time. The sequential execution of importing categories followed by reindexing ensures that all new and updated information is properly indexed and available for site use, following the completion of the import of more frequently updated data. This order respects dependencies between steps and aligns with best practices for handling complex data workflows in B2C Commerce environments.

NEW QUESTION # 62

The client provided these business requirements:

- * The B2C Commerce platform will integrate with the client's Order Management System (OMS).
- * The OMS supports Integration us-no legacy RPC style SOAP services.
- * The OMS is hosted on client s infrastructure.

What is the right cartridge folder to place the WSDL provided for the OMS service?

- A. /cartridge/webreferences2
- B. /cartridge
- C. /cartridge/services
- **D. /cartridge/webreferences**

Answer: D

Explanation:

In Salesforce Commerce Cloud, the standard practice for organizing WSDL files for SOAP services is to place them in the /cartridge/webreferences directory. This folder is specifically designed for storing web service definitions (WSDLs), ensuring they are managed in a structured manner within the cartridge. This organization aids in maintaining clean architecture and simplifies access to these service definitions for development and maintenance purposes.

NEW QUESTION # 63

A developer wants to import the data or different instances.

Which two types of data should the developer consider importing?

Choose 2 answers

- A. Metadata
- **B. Catalog**
- C. Sites configurations
- D. Services
- **E. Customers**

Answer: B,E

Explanation:

When importing data between instances, focusing on significant and impactful data types is essential:

* Option B (Catalog): Includes all product listings, descriptions, categorizations, and relationships. It's crucial for the eCommerce operation, directly affecting site navigation and customer experience.

* Option C (Customers): Customer data import is essential for maintaining continuity in customer relationships, access, and personalization across platforms.

These data types are fundamental to the functioning of an eCommerce site and ensure that essential operational data is consistent across different environments or platform migrations.

NEW QUESTION # 64

The Client has just acquired a new brand and wants to integrate the new brand's current eCommerce site into a current realm as a new site. The acquisition has its own Enterprise Resource Planning (ERP) system for product data and inventory. The new site will use the existing realm's Order Management System (OMS) and Customer Relationship Management (CRM) system.

What two requirements does the Architect need to keep in mind when creating the technical specification document?

Choose 2 answers

- **A. A new inventory Import Job must be created to manage inventory.**
- B. A new order export job must be created to export orders.
- **C. A new product Import Job must be created to manage products.**
- D. A new customer export Job must be created to export customers.

Answer: A,C

Explanation:

When integrating a new brand's eCommerce site into an existing realm, the architect needs to ensure that product data and inventory from the new brand's Enterprise Resource Planning (ERP) system are correctly managed within the realm. Therefore, creating new import jobs for products (Answer B) and inventory (Answer C) is essential. These import jobs will facilitate the synchronization of

the new brand's product catalog and inventory levels with the existing Order Management System (OMS) and Customer Relationship Management (CRM) systems of the realm. Such integration is crucial for maintaining up-to-date product and inventory information across the systems, ensuring seamless operations and data consistency.

NEW QUESTION # 65

.....

Best practice indicates that people who have passed the Arch-303 exam would not pass the exam without the help of the Arch-303 study materials.
