We have three versions of Fortinet FCSS_SDW_AR-7.4 learning materials available, including PDF, Software and APP online. The most popular one is PDF version of Fortinet FCSS_SDW_AR-7.4 study guide can be printed into papers so that you are able to write some notes or highlight the emphasis. On the other hand, Software version of our Fortinet FCSS_SDW_AR-7.4 Practice Questions is also welcomed by customers, especially for windows users.

There are many merits of our product on many aspects and we can guarantee the quality of our FCSS_SDW_AR-7.4 practice engine. Firstly, our experienced expert team compile them elaborately based on the real exam. Secondly, both the language and the content of our FCSS_SDW_AR-7.4 study materials are simple. The content emphasizes the focus and seizes the key to use refined FCSS_SDW_AR-7.4 Questions and answers to let the learners master the most important information by using the least practice. Three, we provide varied functions to help the learners learn our study materials and prepare for the exam.

Best FCSS_SDW_AR-7.4 Study Material 100% Pass | Trustable New FCSS - SD-WAN 7.4 Architect Test Answers Pass for sure

Itbraindumps promise that we will spare no effort to help you pass Fortinet certification FCSS_SDW_AR-7.4 exam. Now you can free download part of practice questions and answers of Fortinet certification FCSS_SDW_AR-7.4 exam on Itbraindumps. When you select Itbraindumps, you can not only pass Fortinet Certification FCSS_SDW_AR-7.4 Exam, but also have one year free update service. Itbraindumps can also promise if you fail to pass the exam, Itbraindumps will 100% refund.

Fortinet FCSS - SD-WAN 7.4 Architect Sample Questions (Q20-Q25):

NEW QUESTION # 20

Refer to the exhibit.

```

Which statement best describe the role of the ADVPN device in handling traffic?

- A. This is a spoke that has received a shortcut query from another spoke and has forwarded the response to its hub.
- B. This is a hub that has received a query from a spoke and has forwarded it to another spoke.
- C. This is a hub in a dual-region topology. The remote hub tunnel ID is 10.0.2.101.
- D. This is a spoke. The kernel received a shortcut request and forwards the query to another spoke.

Answer: A

NEW QUESTION # 21

What are three key routing principles of SD-WAN? (Choose three.)

- A. Policy routes have precedence over SD-WAN rules.
- B. SD-WAN rules are skipped if the best route to the destination is not an SD-WAN member.
- C. SD-WAN members are skipped if they do not have a valid route to the destination.
- D. Directly connected routes have precedence over SD-WAN rules.
- E. SD-WAN rules are skipped if the best route to the destination is a static route

Answer: A,B,C

Explanation:

SD-WAN members without a valid route to the destination are skipped during path selection.

If the best route is not via an SD-WAN member, SD-WAN rules are skipped.

Policy routes take precedence over SD-WAN rules in the routing decision process.

NEW QUESTION # 22

Refer to the exhibits. You use FortiManager to manage the branch devices and configure the SD-WAN template. You have configured direct internet access (DIA) for the IT department users.

Now, you must configure secure internet access (SIA) for all local LAN users and have set the firewall policies as shown in the second exhibit.

Then, when you use the install wizard to install the configuration and the policy package on the branch devices, FortiManager reports an error as shown in the third exhibit. Which statement describes why FortiManager could not install the configuration on the branches?

SD-WAN template on FortiManager 

Name	Assigned to Device/Group	Interface
branches	2 Devices in Total View Details > ↑ branch1_fgt [root] ↑ branch2_fgt [root]	port1 port2

Firewall policies

2	SIA	LAN	port1	LAN-net	all	always	FTP HTTP HTTPS	Accept	no-inspection default	
3	DIA	LAN	underlay	LAN:IT	all	always	ALL	Accept	default certificate-i... default	

FortiManager error message

✓ Policy and Object Validation
✓ Ready to Install

Install Preview | Policy Package Diff | Search...

<input type="checkbox"/>	Device Name	Status	Action
<input type="checkbox"/>	branch1_fgt	Copy Failed	Log
<input type="checkbox"/>	branch2_fgt	Copy Failed	Log

- A. You cannot install SIA and DIA rules on the same device.
- B. You must direct SIA traffic to a VPN tunnel.
- C. You cannot install firewall policies that reference an SD-WAN member.
- D. You cannot install firewall policies that reference an SD-WAN zone.

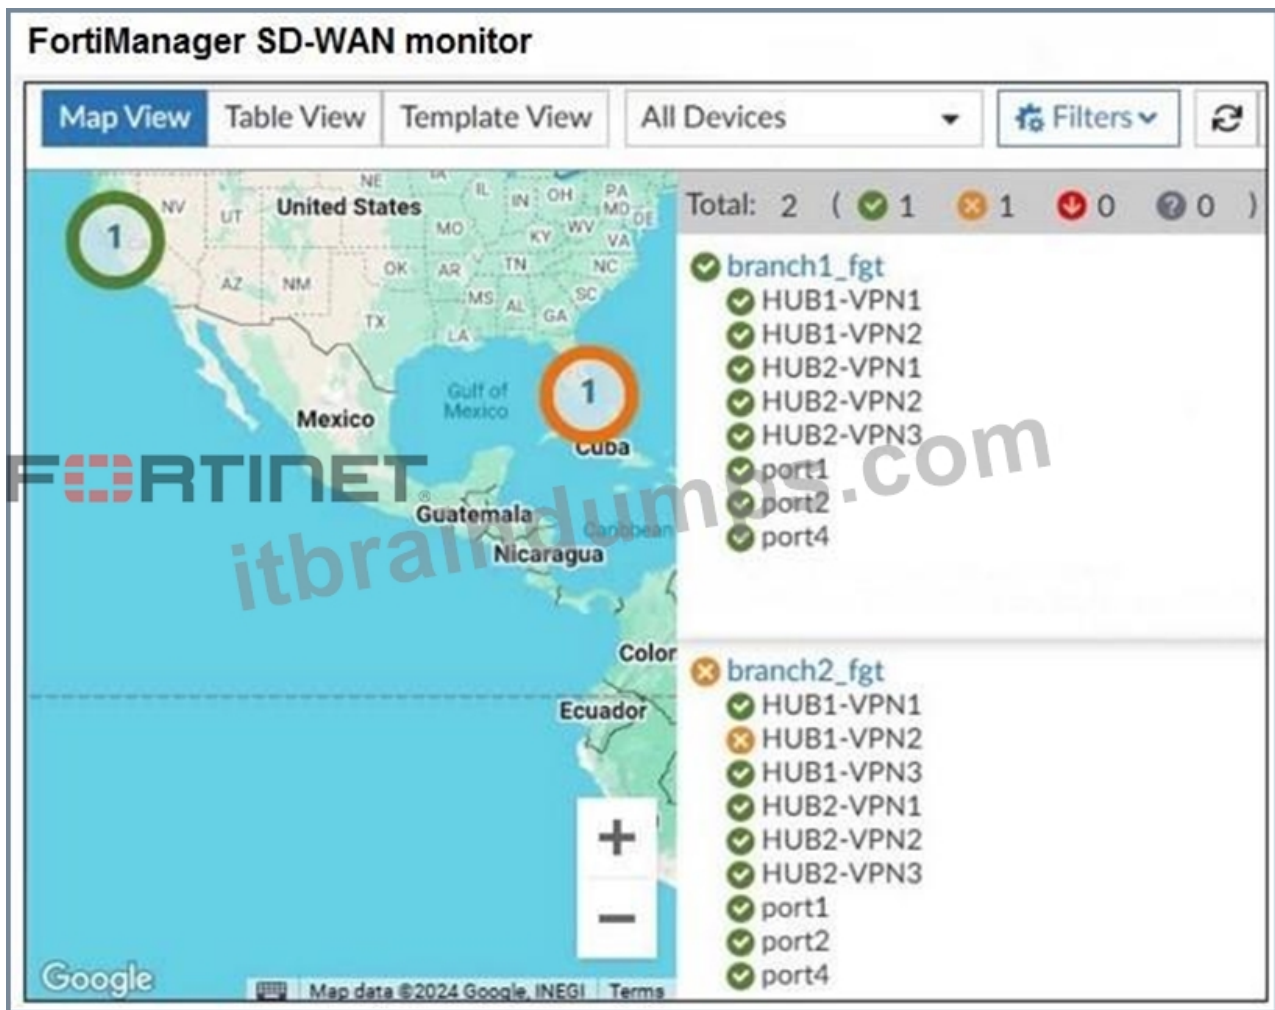

Answer: C

Explanation:

In FortiManager, firewall policies must reference SD-WAN zones, not individual SD-WAN members (interfaces like port1 or port2). The SIA rule incorrectly references port1, which is a member - not a zone - causing the installation failure during validation.

NEW QUESTION # 23

Refer to the exhibit. An administrator checks the status of an SD-WAN topology using the FortiManager SD-WAN monitor menus. All members are configured with one or two SLAs. Which two conclusions can you draw from the output shown? (Choose two.)

- A. This SD-WAN topology contains only two branch devices.
- B. One member of branch2_fgt is missing the SLAs.
- C. The template view should be used to see the hub devices.
- D. branch2_fgt establishes six tunnels to the hubs and they are all up.

Answer: A,B

Explanation:

The monitor shows only two devices (branch1_fgt and branch2_fgt), indicating the topology contains two branch devices. HUB1-VPN2 under branch2_fgt has an orange X, indicating it's up but not meeting SLA requirements - likely due to missing or failing SLA targets.

NEW QUESTION # 24

Which three factors about SLA targets and SD-WAN rules should you consider when configuring SD-WAN rules? (Choose three.)

- A. Member metrics are measured only if a rule uses the SLA target.
- B. SD-WAN rules can use SLA targets to check whether the preferred members meet the SLA requirements.
- C. When configuring an SD-WAN rule, you can select multiple SLA targets if they are from the same performance SLA.
- D. SLA targets are used only by SD-WAN rules that are configured with a Lowest Cost (SLA) strategy.
- E. When configuring an SD-WAN rule, you can select multiple SLA targets from different performance SLAs.

Answer: B,D,E

Explanation:

The use of SLA targets is specific to certain SD-WAN strategies. The "Lowest Cost (SLA)" and "Maximize Bandwidth (SLA)" strategies are explicitly designed to use the configured SLA targets to make routing decisions. The "Best Quality" strategy uses performance metrics but does not necessarily require or reference SLA targets in the same way, while "Manual" does not use metrics at all for path selection.

This is a core function of SD-WAN rules with SLA targets. The purpose of configuring an SLA target with specific thresholds for latency, jitter, and packet loss is to define what is considered "acceptable" performance for an application. SD-WAN rules then use these targets to check if the members (interfaces) meet these requirements before a flow is steered over them, ensuring that a preferred path still offers a good user experience.

FortiGate allows for a single SD-WAN rule to reference multiple, different performance SLAs. This is crucial for complex deployments where a single SD-WAN rule needs to handle traffic for multiple applications that have distinct performance requirements. For example, a single rule might direct VoIP traffic based on one performance SLA with strict latency/jitter targets, while simultaneously handling general web traffic using another performance SLA with more lenient requirements.
