### 問題 #60

You are using a Data store Operation of the type Write. Which parameter must you select to avoid duplicate entries?

- A. Retention Threshold for Alerting
- **B. Overwrite Existing Message**
- C. Encrypted stored Message
- D. Include Message Headers

答案： B

解題說明：

In a Data Store Write operation:

If multiple messages are written with the same Entry ID, enabling Overwrite Existing Message ensures that the previous entry is replaced, avoiding duplicate records.

Other options:

Encrypted Stored Message # Secures data, not related to duplicates.

Include Message Headers # Controls storage of headers, not duplication.

Retention Threshold for Alerting # Configures alerts, not duplication.

Thus, the parameter required to avoid duplicates is Overwrite Existing Message.

### 問題 #61

Which SAP Integration Suite component delivers the Cloud Event to the "emis-s4hana-uc123" message queue?

- A. Process Integration
- B. Open Connector

- C. Event Mesh
- D. API Management

答案： C

解題說明：

In SAP Integration Suite, the component responsible for delivering Cloud Events to message queues is Event Mesh.

Event Mesh handles event-driven communication and manages message queues like emis-s4hana-uc123.

Process Integration (PI/PO) is on-premise middleware, not part of Integration Suite cloud services.

API Management handles APIs, not messaging events.

Open Connectors provides connectivity to third-party SaaS apps, not queue management.

Thus, the Cloud Event is delivered to the message queue via Event Mesh.
