**Pass Guaranteed ISTQB - ISTQB-CTFL - ISTQB Certified Tester Foundation Level (CTFL v4.0) –High Pass-Rate Valid Exam Cram**

Get the test ISTQB-CTFL certification is not achieved overnight, we need to invest a lot of time and energy to review, and the review process is less a week or two, more than a month or two, or even half a year, so ISTQB-CTFL exam questions are one of the biggest advantage is that it is the most effective tools for saving time for users. Users do not need to spend too much time on ISTQB-CTFL Questions torrent, only need to use their time pieces for efficient learning, the cost is about 20 to 30 hours, users can easily master the test key and difficulties of questions and answers of ISTQB-CTFL prep guide.

## ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q239-Q244):

### NEW QUESTION # 239

Which of the following are valid testing principles?

- I) Exhaustive testing is in general impossible.
- II) Exhaustive testing should be executed for code intended to be reused.
- III) Testing may guarantee that a program is correct.
- IV) Testing cannot guarantee that a program is correct.
- V) Defects cluster together in certain areas of the product.

- A. I, IV, V
- B. I, III
- C. II, IV
- D. I, V

**Answer: A**

Explanation:

Statements I, IV and V are valid testing principles according to the ISTQB syllabus. Statement I states that exhaustive testing is in general impossible, because it would require testing all possible inputs, outputs and combinations of states, which is usually impractical or impossible. Statement IV states that testing cannot guarantee that a program is correct, because testing can only show the presence of defects, not their absence. Statement V states that defects cluster together in certain areas of the product, which means that some modules or functions are more likely to contain defects than others. Statements II and III are invalid testing principles. Statement II states that exhaustive testing should be executed for code intended to be reused, which contradicts statement I. Statement III states that testing may guarantee that a program is correct, which contradicts statement IV. ### NEW QUESTION # 240

Which of the following provides the BEST description of statement coverage?

- A. A white-box test technique which focuses on the percentage of executable statements that has been executed by a test suite
- B. An experience-based test technique in which test cases are based on the tester's knowledge of past failures
- C. A white-box test technique which covers the decision results which determine the next statement to be executed
- D. A black-box test technique which uses a state table to derive test cases

**Answer: A**

Explanation:

Statement coverage is a white-box test technique which focuses on executing all possible statements in the code at least once during testing. This helps in determining the percentage of executable statements that have been executed by the test suite, aiming to ensure that all parts of the program have been tested at least once (ISTQB Main Web).

### NEW QUESTION # 241

Which of the following CORRECTLY matches the roles and responsibilities in a formal review?

- A. Facilitator - Fixes defects in the work product under review
- B. Scribe - Collates potential defects found during the individual review activity
- C. Author - Identify potential defects in the work product under review

- D. Review Leader - Creates the work product under review

**Answer: B**

Explanation:

In formal reviews, the scribe's role is to collate potential defects and other findings during the review process.

This position is crucial as it ensures all observations and defects are recorded accurately, facilitating efficient analysis and resolution of issues identified during the review.

References: ISTQB Certified Tester Foundation Level Syllabus v4.0, Section 3.2.4 "Roles and Responsibilities in a Formal Review".

#### NEW QUESTION # 242

Which one of the following statements relating to the benefits of static testing is NOT correct?

- A. Static testing enables early detection of defects before dynamic testing is performed.
- **B. Static testing increases development costs and time.**
- C. Static testing identifies defects which are not easily found by dynamic testing.
- D. Static testing reduces testing costs and time.

**Answer: B**

Explanation:

The statement that "static testing increases development costs and time" is NOT correct. Static testing actually helps to reduce development costs and time by identifying defects early in the development process before dynamic testing is performed. Early detection of defects reduces the cost and effort required to fix them and prevents the propagation of defects to later stages, thus reducing overall testing and development costs.

References: ISTQB CTFL Syllabus, Section 3.1.2, "The Value of Static Testing."

#### NEW QUESTION # 243

Decision table testing is being performed on transactions in a bank's ATM (Automated Teller Machine) system. Two test cases have already been generated for rules 1 and 4, which are shown below:

Rules		R1	R4
Conditions	Speed > 50	T	F
	School Zone	T	F
Actions	\$250 Fine	F	F
	Jail	T	F

Given the following additional test cases:

Rules		DT1	DT2	DT3	DT4
Input	Speed	55	44	66	77
	School Zone	T	T	T	F
Expected Result	\$250 Fine	F	F	F	T
	Jail	T	F	T	F

Which two of the additional test cases would achieve full coverage of the full decision table (when combined with the test cases that have already been generated for rules 1 and 4)?

- A. DT3, DT4
- B. DT1, DT4
- C. DT1, DT2
- **D. DT2, DT3**

**Answer: D**

Explanation:

Decision table testing is used to analyze combinations of inputs to determine the appropriate outputs, often based on specific rules or conditions.

For the problem statement:

\* Rule 1: (Withdrawal = Allowed, Balance = Sufficient, Fast Cash = True, Correct PIN = True)

\* Outcome: Transaction = Approved

\* Rule 4: (Withdrawal = Allowed, Balance = Sufficient, Fast Cash = True, Correct PIN = False)

\* Outcome: Transaction = Declined

The additional test cases are:

\* DT1: (Withdrawal = Allowed, Balance = Insufficient, Fast Cash = True, Correct PIN = True)

\* Outcome: Transaction = Declined

- \* DT2: (Withdrawal = Allowed, Balance = Sufficient, Fast Cash = False, Correct PIN = True)
- \* Outcome: Transaction = Approved
- \* DT3: (Withdrawal = Allowed, Balance = Insufficient, Fast Cash = True, Correct PIN = False)
- \* Outcome: Transaction = Declined
- \* DT4: (Withdrawal = Allowed, Balance = Sufficient, Fast Cash = False, Correct PIN = False)
- \* Outcome: Transaction = Declined

From the given test cases, DT2 covers the scenario where Fast Cash is False, which is not covered in the initial cases. DT3 covers the case where Balance is Insufficient and PIN is incorrect.

Combining Rules 1 and 4 with DT2 and DT3 covers all the scenarios.
