

New CIS-PA Test Registration | Brain Dump CIS-PA Free

DOWNLOAD the newest ITExamDownload CIS-PA PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1tq57YGApL7CB8zkTXjHsaqh-bTVpG89A>

The CIS-PA PDF file contains the real, valid, and updated ServiceNow CIS-PA exam practice questions. These are the real CIS-PA exam questions that surely will appear in the upcoming exam and by preparing with them you can easily pass the final exam. The CIS-PA PDF Questions file is easy to use and install. You can use the CIS-PA PDF practice questions on your laptop, desktop, tabs, or even on your smartphone and start CIS-PA exam preparation right now.

ServiceNow CIS-PA Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Administration and Solutions: This domain covers administrative tasks using the Admin Console and accelerating deployment with pre-built Content Packs.
Topic 2	<ul style="list-style-type: none">Perform Diagnostics and Troubleshooting
Topic 3	<ul style="list-style-type: none">Configure Breakdowns and Breakdown Sources: This section covers setting up breakdowns to analyze indicators across different dimensions, including breakdown mappings, matrices, exclusions, scripted mappings, and bucket groups.
Topic 4	<ul style="list-style-type: none">Architecture and Deployment: This domain covers the foundational components of the Performance Analytics solution and the proper deployment sequence in ServiceNow environments.
Topic 5	<ul style="list-style-type: none">Data Collection: This domain explains how Performance Analytics gathers and processes data, including collection flow, configuration properties, and troubleshooting collection issues.

Brain Dump ServiceNow CIS-PA Free | Exam CIS-PA Materials

We hope this article has given you a good overview of the ServiceNow CIS-PA Exam and what you can expect from it. As always, we recommend you start preparing for your exam as early as possible to give yourself the best chance of success. ITExamDownload offers a wide range of study materials and resources to help you prepare, including practice questions, dumps, and a study guide.

ServiceNow Certified Implementation Specialist - Platform Analytics Sample

Questions (Q49-Q54):

NEW QUESTION # 49

A filtered Time Series widget shows individual trends for the number of open incidents with High and Critical priorities. Which action configures the Responsive Canvas Dashboard to show a combined trend for the Critical and High-priority incidents?

- A. Apply an elements filter to return High and Critical incidents only
- B. Set the Show multiple elements as property to Separate
- C. Check Manual elements and add widget elements for the High and Critical incidents
- **D. Set the Show multiple elements as property to Aggregate**

Answer: D

Explanation:

In Responsive Canvas dashboards, when a Time Series widget contains multiple elements, the Show multiple elements as property controls how those elements are visualized. Setting this property to Aggregate combines the values of all returned elements into a single trend line, which is exactly the desired outcome when viewing a combined trend for High and Critical priority incidents.

Applying an elements filter (option D) limits which elements are displayed but does not combine them into one trend. Setting the property to Separate (option C) explicitly shows individual trend lines for each element.

Manually adding elements (option B) still results in multiple distinct series unless aggregation is enabled.

According to ServiceNow Platform Analytics documentation, aggregation is the correct method for consolidating multiple indicator elements into one unified visualization on a dashboard.

NEW QUESTION # 50

What functionality lets you visualize indicator data over time in units representing periods such as year, quarter, and similar fiscal periods?

- A. Business Calendars
- **B. Fiscal Calendars**
- C. Timecard Calendars
- D. Gregorian Calendars

Answer: B

Explanation:

Fiscal Calendars allow Platform Analytics to aggregate and visualize indicator data using fiscal periods such as fiscal years, quarters, and accounting periods. This is essential for organizations that do not follow standard calendar years for reporting and performance measurement.

Gregorian calendars use standard date boundaries, while Business Calendars define working and non-working time for duration calculations. Timecard calendars are unrelated to analytics aggregation. ServiceNow documentation clearly states that fiscal period-based analysis is enabled through Fiscal Calendars, making option B the correct answer.

NEW QUESTION # 51

There is a Summed Duration of wait time Indicator that stores duration in milliseconds.

Which action accurately configures the displayed duration in hours without creating a separate Formula Indicator?

- A. Use the API method getHours() in the Formula box
- B. Add / 3600000 to the Formula box and check Use formula
- C. Use a Performance Analytics script to convert milliseconds to hours and recollect
- **D. Set the Unit in the Indicator to Hours**

Answer: D

Explanation:

Platform Analytics supports unit conversion for duration-based indicators through the Unit field on the Indicator record. When an indicator stores duration values (such as milliseconds), setting the Unit to Hours automatically converts and displays the values correctly without modifying the underlying data or recollecting scores.

Using formulas or scripts is unnecessary and discouraged when a built-in unit conversion is available. The Formula box is intended for mathematical aggregation logic, not unit conversion. ServiceNow documentation explicitly states that duration indicators should

rely on the Unit setting to control how values are displayed, making option A the correct and supported approach.

NEW QUESTION # 52

Choose 2 options.

Which variables are used in a Performance Analytics script without being defined in the Fields list?

- A. score_start
- B. collection_job_end
- C. sys_updated_on
- D. sys_created_on
- E. score_end
- F. collection_job_start

Answer: A,E

Explanation:

In Performance Analytics scripted indicators, certain system-provided variables are automatically available without being explicitly defined in the Fields list. The variables `score_start` and `score_end` represent the start and end timestamps of the reporting period for which the indicator score is being calculated. These variables are essential for time-aware calculations and historical accuracy. Fields such as `sys_created_on` and `sys_updated_on` must be explicitly added to the Fields list if they are used in scripts. `collection_job_start` and `collection_job_end` are not available script variables in indicator calculations. ServiceNow documentation clearly identifies `score_start` and `score_end` as built-in variables available to Performance Analytics scripts, making options B and F the correct answers.

NEW QUESTION # 53

Which statements describe the respective Performance Analytics object behavior?

- A. The frequency of an Indicator can differ from that of an Indicator Source
- B. Breakdowns require a Breakdown Mapping to be added to an Automated Indicator
- C. Data collection must be completed before assigning Breakdowns to an Indicator
- D. Indicator Sources with a Monthly frequency can still be collected in a Daily job

Answer: A,D

Explanation:

In ServiceNow Performance Analytics, Indicator Sources and Indicators are distinct objects with different responsibilities, and understanding their behavior is essential for correct architecture and deployment.

Option A is correct.

Indicator Sources define how and when raw data is queried, but they can be reused by multiple data collection jobs. Even if an Indicator Source is configured with a Monthly frequency, it can still be executed by a Daily data collection job. The job frequency controls execution timing, not the source frequency itself. This reuse is a documented performance optimization in Platform Analytics. Option C is correct.

The Indicator frequency is independent of the Indicator Source frequency. For example, an Indicator Source may collect daily raw data, while the Indicator aggregates and stores scores weekly or monthly. This separation allows flexible aggregation strategies and is explicitly supported by Platform Analytics design.

Option B is incorrect because Breakdowns require a Breakdown Mapping, but they are not inherently tied only to Automated Indicators, nor is this statement describing object behavior accurately in isolation.

Option D is incorrect because Breakdowns can be assigned to an Indicator before or after data collection; they are applied when the next collection runs.

NEW QUESTION # 54

.....

ServiceNow exam guide have to admit that the exam of gaining the ServiceNow certification is not easy for a lot of people, especial these people who have no enough time. If you also look forward to change your present boring life, maybe trying your best to have the CIS-PA latest questions are a good choice for you. Now it is time for you to take an exam for getting the certification. If you have any worry about the CIS-PA Exam, do not worry, we are glad to help you. Because the CIS-PA cram simulator from our

company are very useful for you to pass the exam and get the certification.
