**Answer: A**

### NEW QUESTION # 13

Refer to the exhibit.

## User Productivity

### Application Usage

The FortiGuard research team categorizes applications into different categories based on the application behavioral characteristics, underlying technology, and the related traffic transaction characteristics. The categories allow for better application control. FortiGuard maintains thousands of application sensors and can even perform deep application inspection. For example, IT managers can get unprecedented visibility into filenames sent to the cloud or the titles of videos being streamed.

For application category details, see:  
<http://www.fortiguard.com/encyclopedia/application>

#### App Categories

Unknown	41.81%
Web.Client	22.86%
Network.Service	15.14%
General.Interest	12.00%
Collaboration	6.23%
Update	1.50%
Video/Audio	0.21%
Social.Media	0.18%
Email	0.07%

With the proliferation of cloud-based computing, enterprises are increasingly reliant on third parties for infrastructure plumbing. Unfortunately for enterprises, this means that their information is only as secure as the cloud provider's security. In addition, it can often introduce redundancy (if services are already available internally) and increase costs (if not monitored properly).

#### Cloud Usage (SaaS)

IT managers are often ~~unaware~~ how many cloud-based services are in use within their organization. Sometimes, these applications can be used to circumvent or even replace corporate infrastructure already available to users in lieu of ease of use. Unfortunately, a potential side effect of this is that your sensitive corporate information could be transferred to the cloud. Accordingly, your data could be exposed if the cloud provider's security infrastructure is breached.

#### Cloud Usage (IaaS)

The daily report for application usage shows an unusually high number of unknown applications by category. What are two possible explanations for this? (Choose two.)

- A. Certificate inspection is not being used to scan application traffic.
- B. Zero trust network access (ZTNA) tags are not being used to tag the correct users.
- C. Deep inspection is not being used to scan traffic.**
- D. The inline-CASB application control profile does not have application categories set to Monitor**

**Answer: C,D**

## NEW QUESTION # 14
