

MTCNA認證指南 - MTCNA在線題庫

從Google Drive中免費下載最新的Testpdf MTCNA PDF版考試題庫：<https://drive.google.com/open?id=1q-LChXcPRORRrOUi47mbxJLa8GGVXM3>

MikroTik的MTCNA考試認證，Testpdf是當前最新MikroTik的MTCNA考試認證和考題準備問題提供認證的候選人中的佼佼者，我們資源不斷被修訂和更新，具有緊密的相關性和緊密性，今天你準備MikroTik的MTCNA認證，你將要選擇你要開始的訓練，而且要通過你下一次的考題，由於我們大部分考題是每月更新一次，你將得到最好的資源與市場的新鮮品質和可靠性的保證。

目前，考生報考 MikroTik 認證最多的科目：MTCNA。選擇 MTCNA 考古題準備考試只是一種方式，優點在於快速有效的幫助考生通過考試。缺點就是缺乏實踐，實踐是在平時的工作之余可以勤加練習。如果決定參加 MTCNA 認證考試並通過考試，拿到屬於自己的 MikroTik 的 MTCNA 認證是當務之急。而 MTCNA 考古題可以幫助你在準備考試時節省很多的時間，順利通過考試。

>> MTCNA認證指南 <<

MTCNA認證指南和資格考試中的領先提供者 & MTCNA: MikroTik Certified Network Associate Exam

Testpdf作為專門提供MTCNA認證考試相關資料的提供者，一直以來都把為考生們提供最優秀的資料作為自己的目標。與其他網站相比，Testpdf更得大家的信任。這是為什麼呢？因為Testpdf有著多年的經驗，並且一直專心致力於MTCNA認證考試的研究，總結出了很多關於考試的規律。這樣，Testpdf的資料就可以有很高的命中率。這也保證了大家的考試的合格率。所以Testpdf得到了大家的信任。

最新的 MTCNA - MikroTik Training MTCNA 免費考試真題 (Q15-Q20):

問題 #15

A routing table has the following entries:

- 0 dst-address=10.0.0.0/24 gateway=10.1.5.126
- 1 dst-address=10.1.5.0/24 gateway=10.1.1.1
- 2 dst-address=10.1.0.0/24 gateway=25.1.1.1
- 3 dst-address=10.1.5.0/25 gateway=10.1.1.2

Which gateway will be used for a packet with destination address 10.1.5.126?

- A. 25.1.1.1
- **B. 10.1.1.1**
- C. 10.1.5.126
- D. 10.1.1.2

答案： B

解題說明：

Routing decisions are based on the longest prefix match (i.e., the most specific subnet). First, determine which route has the most specific match for 10.1.5.126.

* Route 1: 10.1.5.0/24 # covers 10.1.5.0 to 10.1.5.255 ##Match

* Route 3: 10.1.5.0/25 # covers 10.1.5.0 to 10.1.5.127 ##Also a match and more specific

* BUT, 10.1.5.126 falls within /25 (last usable host)# So, Route 3 should be preferred due to longer prefix However, let's clarify: If Route 3 (dst-address=10.1.5.0/25) has a next-hop (gateway) of 10.1.1.2, and if that route is reachable, it should be chosen.

Wait - it appears the answer marked in the original key might be inconsistent with routing rules.

Let's correct it:

Matching routes:

* Route 1: /24 # Prefix length: 24

* Route 3: /25 # Prefix length: 25 # More specific # Preferred#

Hence:

* 10.1.5.126 matches 10.1.5.0/25 (Route 3)

* Gateway for that = 10.1.1.2 # Correct answer: C

Corrected answer: C

MTCNA Course Manual - Routing Decision Process:

"MikroTik uses longest prefix match - the most specific (longest) subnet wins." Rene Meneses Guide - Routing Resolution:

"If multiple routes match, the one with the most specific netmask (largest prefix) is selected." Terry Combs Notes - Routing Table

Evaluation:

"Router picks based on subnet specificity. /25 beats /24."

問題 #16

What protocol is used to find the hardware address of a local device?

- **A. ARP**
- B. ICMP
- C. RARP
- D. IP

答案： A

解題說明：

ARP (Address Resolution Protocol) is used to resolve IP addresses to MAC (hardware) addresses on a local network.

MTCNA Course Material - ARP & Layer 2 Communication:

"ARP translates an IP address to a MAC address on local networks. It is necessary for IP communication within a broadcast domain." Rene Meneses MTCNA Study Guide - ARP Explanation:

"When sending to a local IP, the host first uses ARP to determine the hardware address. This is done through broadcast ARP requests." MikroTik Wiki - ARP Functionality:

"RouterOS uses ARP to associate IP addresses with hardware (MAC) addresses in the LAN." Other options:

* A. RARP is Reverse ARP, outdated and rarely used.

* C. IP is the higher-layer addressing protocol.

* D. ICMP is used for ping and diagnostics.

Only ARP (Option B) is correct.

問題 #17

Which of the following protocols / ports are used for SNMP (Simple Network Management Protocol)?

- A. TCP 123
- B. TCP 162

- C. UDP 161
- D. TCP 25
- E. TCP 161
- F. UDP 162

答案：C,F

解題說明：

SNMP uses the following ports:

- * UDP 161: Used for SNMP agent queries (GET, SET, etc.)
- * UDP 162: Used by SNMP managers to receive trap notifications

MTCNA Course Material - SNMP and Monitoring:

"SNMP uses UDP 161 for polling devices and UDP 162 for traps."

MikroTik Wiki - SNMP:

"SNMP communication uses UDP ports 161 (queries) and 162 (traps). TCP is not used for SNMP by default." Option breakdown:

- * A: TCP 162 # incorrect (SNMP traps use UDP)
- * B#UDP 162
- * C#UDP 161
- * D: TCP 25 = SMTP
- * E: TCP 123 = NTP (incorrect protocol and transport)
- * F: TCP 161 = incorrect transport

問題 #18

A PC with IP 192.168.1.2 can access internet, and static ARP has been set for that IP address on gateway.

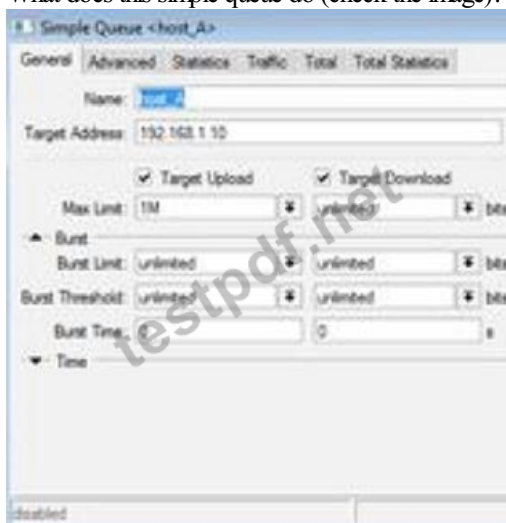

When the PC Ethernet card failed, the user change it with a new card and set the same IP for it. What else should be done? [multiple answers]

- A. Nothing - it will work as before
- B. MAC-address of the new card has to be changed to MAC address of old card
- C. Another IP has to be added for Internet access
- D. Old static ARP entry on gateway has to be updated for the new card

答案：B,D

問題 #19

What does this simple queue do (check the image)?

- A. Queue guarantees download data rate of one megabit per second for host 192.168.1.10
- B. Queue guarantees upload data rate of one megabit per second for host 192.168.1.10
- C. Queue limits host 192.168.1.10 upload data rate to one megabit per second.
- D. Queue limits host 192.168.1.10 download data rate to one megabit per second.

答案：C
