Actual GH-100 Test Prep is Attributive Practice Questions to High-Efficient Learning

With the development of information and communications technology, we are now living in a globalized world. GH-100 information technology learning is correspondingly popular all over the world. Modern technology has changed the way how we live and work. In current situation, enterprises and institutions require their candidates not only to have great education background, but also acquired professional GH-100 Certification. Considering that, it is no doubt that an appropriate certification would help candidates achieve higher salaries and get promotion.

Microsoft GH-100 Exam Syllabus Topics:

Topic	Details

Topic 1	• Manage access and permissions based on membership: This section of the exam measures skills of DevOps Engineers and reviews how to manage organizations, teams, and repository permissions. It includes default permission settings, team synchronization through AD, scripting across multiple organizations, and aligning enterprise policies with trust requirements. It also contrasts roles such as organization members, owners, collaborators, and billing managers.
Topic 2	• Manage user identities and GitHub authentication: This section of the exam measures skills of DevOps Engineers and focuses on managing authentication and identity across organizations using SAML SSO, SCIM, and team synchronization. Candidates need to understand identity providers, user membership implications, authorization models, and enforcing security measures such as two-factor authentication.
Topic 3	• Manage GitHub Actions: This section of the exam measures skills of DevOps Engineers and emphasizes managing workflows, reusable actions, and distribution strategies within the enterprise. It explains configuring organization-level policies, managing self-hosted and GitHub-hosted runners, controlling access through IP allow lists, handling encrypted secrets, and integrating third-party vaults for workflow security.
Topic 4	• Support GitHub Enterprise for users and key stakeholders: This section of the exam measures skills of GitHub Enterprise Administrators and covers supporting users, identifying issues that can be resolved internally versus those needing GitHub Support, and generating support bundles and diagnostics. It also involves recognizing underutilized features, managing workflows like branching and pull requests, understanding CI • CD strategies, recommending tooling, and extending capabilities through APIs or Marketplace apps.
Topic 5	• Enable secure software development and ensure compliance: This section of the exam measures skills of GitHub Enterprise Administrators and deals with applying GitHub's security and compliance capabilities. It covers policies, auditing, scrubbing sensitive data, secret scanning, code scanning with CodeQL, dependency management with Dependabot, and implementing security response plans. It also explores authentication tokens, app security policies, and enterprise managed users.

Microsoft GitHub Administration Sample Questions (Q41-Q46):

NEW QUESTION # 41
You need to create a support bundle for your GitHub Enterprise Server instance with the hostname ghe.avocado.corp. What command should you use to create a support bundle?

- A. ssh -p 122 adming@ghe.avocado.corp - 'ghe-diagnostics' > support-bundle.tgz
- B. ssh -p 122 adming@ghe.avocado.corp -- 'ghe-support-bundle -o' > support-bundle.tgz
- C. curl -u admin https://ghe.avocado.corp/diagnostics/support-bundle.tgz -o
- D. ssh -p 122 adming@ghe.avocado.corp -- 'ghe-config generate-support-bundle' > support-bundle.tgz

Answer: B

Explanation:
Run the ghe-support-bundle command over SSH on your appliance and redirect its output to a file. For example:
ssh -p 122 admin@ghe.avocado.corp -- 'ghe-support-bundle -o' > support-bundle.tgz This invokes the built-in support-bundle utility on your GitHub Enterprise Server instance and captures the resulting archive locally.

NEW QUESTION # 42
Why is a GitHub App preferred over a PAT for machine authentication?

- A. GitHub Apps have time-limited installation tokens with scoped access
- B. PATs cannot be used in GitHub Actions
- C. GitHub Apps are required to pass SAML assertions
- D. PATs support fewer GitHub APIs than Apps

Answer: A

Explanation:

GitHub Apps issue short-lived installation tokens that you scope to only the permissions and repositories your automation needs, reducing blast radius and automatically rotating credentials.

NEW QUESTION # 43
You discover that a secret (e.g., a token or password) was accidentally committed to a GitHub repository. What is the first step you should take to mitigate the risk?

- A. Delete the repository and create a new one to ensure the secret is no longer accessible.
- B. Revoke and/or rotate the secret to render it unusable, then assess whether history rewriting is necessary.
- C. Contact GitHub Support to remove the secret from all forks and clones of the repository.
- D. Rewrite the repository history using git filter-repo or BFG Repo-Cleaner to remove the secret from all commits.

Answer: B

Explanation:
The immediate priority is to revoke or rotate the exposed credential so it can no longer be used; once it's invalidated, you can safely proceed with history-rewriting or other cleanup steps.

NEW QUESTION # 44
Which of the following is the responsibility of an Organization Owner in GitHub? (Choose three.)

- A. Manage organization settings, such as configuration and default permissions.
- B. Create repositories without approval from other members.
- C. View and manage organization billing information.
- D. Access repositories only if explicitly granted by a team maintainer.

Answer: A,B,C

Explanation:
Organization owners can view and edit billing information for the organization.
Organization owners may create new repositories in the organization without needing approval from other members.
Organization owners have full administrative control over organization settings, including configuring default repository permissions.

NEW QUESTION # 45
Your enterprise has multiple organizations, and you want to ensure consistent security policies across all teams. Which feature should you use?

- A. Organization-specific teams with custom policies.
- B. Enterprise-level teams with inherited enterprise policies.
- C. Assigning admin permissions to all team members.
- D. Outside collaborators for all repositories.

Answer: B

Explanation:
By using enterprise-level teams with inherited enterprise policies, you can group members across all your organizations and enforce the same security settings globally - ensuring every team abides by the enterprise's mandatory policies.

NEW QUESTION # 46
......

You must be curious about your exercises after submitting to the system of our GH-100 study materials. Now, we have designed an automatic analysis programs to facilitate your study. You will soon get your learning report without delay. Not only can you review what you have done yesterday on the online engine of the GH-100 study materials, but also can find your wrong answers and mark them clearly. So your error can be corrected quickly. Then you are able to learn new knowledge of the GH-100 Study Materials. Day by day, your ability will be elevated greatly. Intelligent learning helper can relieve your heavy burden. Our GH-100 study

materials deserve your purchasing. If you are always waiting and do not action, you will never grow up.
