Our company was built in 2008 since all our education experts have more than ten years' experience in 010-160 guide torrent. The most important characters we pay attention on are our quality and pass rate. We devote ourselves to improve passing rate constantly and service satisfaction degree of our 010-160 training guide. And now you can find the data provided from our loyal customers that our pass rate of 010-160 learning guide is more than 98%. You will successfully pass your 010-160 exam for sure.

The Linux Essentials Certificate Exam covers a broad range of topics, including basic command-line skills, file management, system administration, security, and networking. 010-160 exam consists of 40 multiple-choice questions that are designed to test the candidate's knowledge and understanding of Linux operating systems. 010-160 Exam is conducted in a proctored environment and is available in multiple languages. Upon successful completion of the exam, candidates will be awarded the Linux Essentials Certificate, which is a valuable credential for anyone looking to start a career in Linux system administration or related fields.

## 010-160 New Braindumps Ebook - Pass Guaranteed Quiz 2026 First-grade 010-160: Linux Essentials Certificate Exam - version 1.6 Vce Torrent

Our RealVCE team always provide the best quality service in the perspective of customers. There are many reasons why we are be trusted: 24-hour online customer service, the free experienced demo for 010-160 exam materials, diversity versions, one-year free update service after purchase, and the guarantee of no help full refund. If you can successfully pass the 010-160 Exam with the help of our RealVCE, we hope you can remember our common efforts.

Lpi 010-160, also known as the Linux Essentials Certificate Exam, version 1.6, is a certification exam that is designed to test the foundational knowledge of Linux, open source software, and the associated technologies. 010-160 Exam is a great starting point for individuals who are interested in pursuing a career in Linux or open source technology. It covers a range of topics, including basic command-line skills, file permissions, networking fundamentals, and more.

### Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q41-Q46):

#### NEW QUESTION # 41

A directory contains the following files:

What would be the output of the following shell script?  
for file in \*.txt

- A. c.cav
- B. A.txt
- C. A.txt
- D. a b
- E. \*.txt
- F. txt

**Answer: C**

Explanation:

Explanation

The shell script uses a for loop to iterate over the files that match the pattern \*.txt in the current directory. The pattern \*.txt means any file name that ends with .txt, regardless of the case. The loop body simply prints the value of the variable file, which holds the name of the current file in each iteration. Therefore, the output of the shell script would be the names of the files that end with .txt, one per line. In this case, the files are A.txt and b.txt, so the output would be:

a.txt b.txt

This corresponds to option E. The other options are incorrect for the following reasons:

\* Option A: \*.txt is not the output of the shell script, but the pattern that the loop uses to match the files.

The shell expands the pattern to the actual file names before executing the loop.

\* Option B: a and b are not the names of the files, but the first characters of the file names. The loop prints the whole file name, including the extension.

\* Option C: c.cav is not a file that matches the pattern \*.txt, because it has a different extension. The loop ignores files that do not end with .txt.

\* Option D: A.txt is only one of the files that matches the pattern \*.txt, but not the only one. The loop prints both A.txt and b.txt.

#### NEW QUESTION # 42

FILL BLANK

What keyword is used in a shell script to begin a loop? (Specify one keyword only, without any additional information.)

**Answer:**

Explanation:

for

### NEW QUESTION # 43

How is a new Linux computing instance provisioned in an IaaS cloud?

- A. The standard Linux installer has to be run through a remote console.
- B. After buying a Linux distribution, its vendor delivers it to a cloud instance.
- **C. A provider-specific configuration file describing the desired installation is uploaded to the cloud provider.**
- D. The cloud hosting organization provides a set of pre-prepared images of popular Linux distributions.
- E. The installation has to be prepared in a local virtual machine which is then copied to the cloud.

**Answer: C**

### NEW QUESTION # 44

Which of the following statements are true regarding a typical shell script? (Choose two.)

- **A. It has the executable permission bit set.**
- B. It starts with the two character sequence #!.
- C. It is located in /usr/local/scripts/.
- D. It is located in /etc/bash/scripts/.
- **E. It is compiled into a binary file compatible with the current machine architecture.**

**Answer: A,E**

### NEW QUESTION # 45

What information is stored in /etc/passwd? (Choose three correct answers.)

- A. The user's storage space limit
- B. The encrypted password
- **C. The username**
- **D. The numerical user ID**
- **E. The user's default shell**

**Answer: C,D,E**

Explanation:

Explanation

The /etc/passwd file is a plain text-based database that contains information for all user accounts on the system. It is owned by root and has 644 permissions. The file can only be modified by root or users with sudo privileges and readable by all system users. Each line of the /etc/passwd file contains seven comma-separated fields, representing a user account. The fields are as follows:

\* Username: The string you type when you log into the system. Each username must be a unique string on the machine. The maximum length of the username is restricted to 32 characters.

\* Password: In older Linux systems, the user's encrypted password was stored in the /etc/passwd file. On most modern systems, this field is set to x, and the user password is stored in the /etc/shadow file.

\* User ID (UID): The user identifier is a number assigned to each user by the operating system to refer to a user. It is used by the kernel to check for the user privileges and grant access to system resources. The UID 0 is reserved for the root user and cannot be assigned to any other user.

\* Group ID (GID): The user's group identifier number, referring to the user's primary group. When a user creates a file, the file's group is set to this group. Typically, the name of the group is the same as the name of the user. User's secondary groups are listed in the /etc/group file.

\* User ID Info (GECOS): This is a comment field. This field contains a list of comma-separated values with the following information: User's full name or the application name, Room number, Work phone number, Home phone number, Other contact information.

\* Home directory: The absolute path to the user's home directory. It contains the user's files and configurations. By default, the user home directories are named after the name of the user and created under the /home directory.

\* Login shell: The absolute path to the user's login shell. This is the shell that is started when the user logs into the system. On most Linux distributions, the default login shell is Bash.

Therefore, the correct answers are B, C, and E. The user's storage space limit (A) is not stored in the /etc/passwd file, but in the /etc/quota file. The encrypted password (D) is not stored in the /etc/passwd file, but in the /etc/shadow file. References:
