

# 100% Pass Pass-Sure Palo Alto Networks - Authorized NetSec-Analyst Test Dumps

BONUS!!! Download part of Itcertkey NetSec-Analyst dumps for free: <https://drive.google.com/open?id=16QFF6z56bjnOtJuAzc3xvPVIzpYkK2ZY>

In today's technological world, more and more students are taking the NetSec-Analyst exam online. While this can be a convenient way to take an Palo Alto Networks NetSec-Analyst exam dumps, it can also be stressful. Luckily, Itcertkey's best Palo Alto Networks NetSec-Analyst exam questions can help you prepare for your Palo Alto Networks NetSec-Analyst Certification Exam and reduce your stress. If you are preparing for the Palo Alto Networks Network Security Analyst (NetSec-Analyst) exam dumps our NetSec-Analyst Questions help you to get high scores in your NetSec-Analyst exam.

## Palo Alto Networks NetSec-Analyst Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• Troubleshooting: This section of the exam measures the skills of Technical Support Analysts and covers the identification and resolution of configuration and operational issues. It includes troubleshooting misconfigurations, runtime errors, commit and push issues, device health concerns, and resource usage problems. This domain ensures candidates can analyze failures across management systems and on-device functions, enabling them to maintain a stable and reliable security infrastructure.</li> </ul>

Topic 2	<ul style="list-style-type: none"> <li>• <b>Object Configuration Creation and Application:</b> This section of the exam measures the skills of Network Security Analysts and covers the creation, configuration, and application of objects used across security environments. It focuses on building and applying various security profiles, decryption profiles, custom objects, external dynamic lists, and log forwarding profiles. Candidates are expected to understand how data security, IoT security, DoS protection, and SD-WAN profiles integrate into firewall operations. The objective of this domain is to ensure analysts can configure the foundational elements required to protect and optimize network security using Strata Cloud Manager.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Policy Creation and Application:</b> This section of the exam measures the abilities of Firewall Administrators and focuses on creating and applying different types of policies essential to secure and manage traffic. The domain includes security policies incorporating App-ID, User-ID, and Content-ID, as well as NAT, decryption, application override, and policy-based forwarding policies. It also covers SD-WAN routing and SLA policies that influence how traffic flows across distributed environments. The section ensures professionals can design and implement policy structures that support secure, efficient network operations.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Management and Operations:</b> This section of the exam measures the skills of Security Operations Professionals and covers the use of centralized management tools to maintain and monitor firewall environments. It focuses on Strata Cloud Manager, folders, snippets, automations, variables, and logging services. Candidates are also tested on using Command Center, Activity Insights, Policy Optimizer, Log Viewer, and incident-handling tools to analyze security data and improve the organization overall security posture. The goal is to validate competence in managing day-to-day firewall operations and responding to alerts effectively.</li> </ul>

## Reliable Palo Alto Networks NetSec-Analyst Test Testking | Test NetSec-Analyst Vce Free

With the development of information and communications technology, we are now living in a globalized world. NetSec-Analyst information technology learning is correspondingly popular all over the world. Modern technology has changed the way how we live and work. When it comes to the study materials selling in the market, qualities are patchy. But our NetSec-Analyst test material has been recognized by multitude of customers, which possess of the top-class quality, can help you pass exam successfully. On the other hand, our NetSec-Analyst Latest Dumps are designed by the most experienced experts, thus it can not only teach you knowledge, but also show you the method of learning in the most brief and efficient ways.

### Palo Alto Networks Network Security Analyst Sample Questions (Q40-Q45):

#### NEW QUESTION # 40

Which policy set should be used to ensure that a policy is applied just before the default security rules?

- A. Shared post-rulebase
- B. Local Firewall policy
- C. Child device-group post-rulebase
- D. Parent device-group post-rulebase

**Answer: A**

Explanation:

The policy set that should be used to ensure that a policy is applied just before the default security rules is the shared post-rulebase. The shared post-rulebase is a set of Security policy rules that are defined on Panorama and apply to all firewalls or device groups. The shared post-rulebase is evaluated after the local firewall policy and the child device-group post-rulebase, but before the default security rules. The shared post-rulebase can be used to enforce common security policies across multiple firewalls or device groups, such as blocking high-risk applications or traffic. References: Security Policy Rule Hierarchy, Security Policy Rulebase, Certifications - Palo Alto Networks, Palo Alto Networks Certified Network Security Administrator (PAN-OS 10.0) or [Palo Alto Networks Certified Network Security Administrator (PAN-OS 10.0)].

### NEW QUESTION # 41

A Palo Alto Networks firewall, part of an HAActive/Passive pair, is experiencing frequent failovers. The logs indicate:

'HA state changed from Active to Passive due to heartbeat failure on interface ethernet1/1.'

Upon investigation, the physical link for ethernet/1 (HAI control link) appears to be up and connected, and there are no direct errors on the interface. However, the failovers persist. What is the MOST intricate troubleshooting step to perform given this scenario?

- A. Check the HA interface monitoring settings and adjust the heartbeat interval or failover detection time.
- B. Confirm that the HA primary and secondary IP addresses for HAI are correctly configured and are in the same subnet.
- C. Review the 'System > HA > Path Monitoring' configuration to identify if a monitored data interface is failing.
- D. Verify the cable and SFP module for ethernet/1 on both HA peers and replace if faulty.
- E. Examine the 'debug swm log' and 'debug pcom log' output on both firewalls for specific heartbeat packet drops, CPU spikes, or process crashes affecting the HA daemon.

**Answer: E**

Explanation:

While A, B, D, and E are valid troubleshooting steps for HA issues, the question states 'physical link for ethernet/1 appears to be up and connected' and no 'direct errors on the interface', implying basic connectivity is present. Frequent failovers due to 'heartbeat failure' on an apparently healthy control link, in a 'Very tough' scenario, points to a deeper, intermittent software or resource issue. Debugging the HA daemon (Service Watchdog Manager 'swm' and Process Communication Manager 'pcom') logs (C) is the most intricate and revealing step. These logs provide granular details on heartbeat packet processing, internal communication, and potential resource contention or crashes within the firewall's operating system that might be causing the heartbeat packets to be missed or delayed, even if the physical link is up. This is a common pattern for elusive HA issues not directly related to physical link or simple configuration errors.

### NEW QUESTION # 42

Which feature enables an administrator to review the Security policy rule base for unused rules?

- A. Security policy tags eb
- B. Policy Optimizer
- C. Test Policy Match
- D. View Rulebase as Groups

**Answer: B**

Explanation:

Policy Optimizer provides a simple workflow to migrate your legacy Security policy rulebase to an App-ID based rulebase, which improves your security by reducing the attack surface and gaining visibility into applications so you can safely enable them. Policy Optimizer can also identify unused rules, duplicate rules, and rules that can be merged or reordered to optimize your rulebase. You can use Policy Optimizer to review the usage statistics of your rules and take actions to clean up or modify your rulebase as needed. References: Security Policy Rule Optimization, Updated Certifications for PAN-OS 10.1, Free PCNSE Questions for Palo Alto Networks PCNSE Exam

### NEW QUESTION # 43

Which two security profile types can be attached to a security policy? (Choose two.)

- A. vulnerability
- B. threat
- C. DDoS protection
- D. antivirus

**Answer: A,D**

### NEW QUESTION # 44

An administrator plans to upgrade a pair of active/passive firewalls to a new PAN-OS release. The environment is highly sensitive, and downtime must be minimized.

What is the recommended upgrade process for minimal disruption in this high availability (HA) scenario?

- A. Push the new PAN-OS version simultaneously to both firewalls, having them upgrade and reboot in parallel. Rely on automated HA reconvergence to restore normal operations without manually failing over traffic.
- B. Isolate both firewalls from the production environment and upgrade them in a separate, offline setup. Reconnect them only after validating the new software version, resuming HA functionality once both units are fully upgraded and tested.
- C. Shut down the currently active firewall and upgrade it offline, allowing the passive firewall to handle all traffic. Once the active firewall finishes upgrading, bring it back online and rejoin the HA cluster. Finally, upgrade the passive firewall while the newly upgraded unit remains active.
- **D. Suspend the active firewall to trigger a failover to the passive firewall. With traffic now running on the former passive unit, upgrade the suspended (now passive) firewall and confirm proper operation. Then fail traffic back and upgrade the remaining firewall.**

**Answer: D**

Explanation:

In an active/passive HA setup, the recommended process for upgrading involves minimizing downtime and ensuring traffic continuity by using the failover process:

Suspend the active firewall: This triggers a failover to the passive unit, making it the active unit.

Upgrade the former passive (now active) unit: With traffic now running on the previously passive unit, upgrade the suspended unit while the active unit continues handling traffic.

Confirm proper operation: Once the upgrade is complete, verify that the upgraded unit is functioning properly.

Fail traffic back: Once the upgraded firewall is confirmed to be working, fail the traffic back to the original active unit and upgrade the remaining firewall.

## NEW QUESTION # 45

.....

Our NetSec-Analyst Exam Torrent carries no viruses. We provide free update and online customer service which works on the line whole day. Our study materials provide varied versions for you to choose and the learning costs you little time and energy. You can use our NetSec-Analyst exam prep immediately after you purchase them, we will send our product within 5-10 minutes to you. We treat your time as our own time, as precious as you see, so we never waste a minute or two in some useless process. Please rest assured that use, we believe that you will definitely pass the exam.
