

C-BCBTP-2502更新和資格考試中的領先提供商和C-BCBTP-2502最新考證

當前 SAP 作為企業資訊解決方案的重要性及緊要性與日俱增，相關的工作機會將會越來越多，對技術能力的要求也越來越被企業作為面試的一個標準，所以不管在哪個行業，SAP 工作者都必須不斷自我學習、接受訓練課程或是參加各式的專業認證來充實自己，使自己在工作上可以更加得心應手。而通過了SAP C-BCBTP-2502 認證考試，證明你的IT專業知識很強，有很強的能力，可以勝任一份很好的工作。

SAP C-BCBTP-2502 考試大綱：

主題	簡介
主題 1	<ul style="list-style-type: none">Discovering SAP Business Technology Platform: This section of the exam measures the skills of SAP Solution Architects and focuses on positioning the SAP Business Technology Platform within the overall SAP Business Suite strategy. It includes understanding the platform's role in enabling transformation, aligning with enterprise strategy, and supporting digital innovation. Candidates are expected to recognize the relevance of SAP BTP in modern business processes and how it integrates with other SAP offerings.
主題 2	<ul style="list-style-type: none">Illustrating CIO Transformation Delivered by SAP Business Suite: This section of the exam evaluates the skills of IT Transformation Managers and covers the role of SAP Business Suite in delivering value for CIO-led digital transformation. It highlights the significance of SAP's portfolio in enterprise IT, introduces the capabilities of SAP BTP, and shows how it connects with end-to-end processes and industry-specific use cases. Candidates should also be able to identify the key products within SAP BTP and explain how cross-portfolio components integrate to deliver measurable value.

你還在為通過SAP C-BCBTP-2502認證考試難度大而煩惱嗎？你還在為了通過SAP C-BCBTP-2502認證考試廢寢忘食的努力復習嗎？想更快的通過SAP C-BCBTP-2502認證考試嗎？快快選擇我們Fast2test吧！有了他可以迅速的完成你的夢想。

最新的 SAP Certified Associate C-BCBTP-2502 免費考試真題 (Q28-Q33):

問題 #28

Which of the following SAP BTP components enhances enterprise data governance?

- A. SAP BusinessObjects BI
- B. SAP Concur
- C. SAP AppGyver

- **D. SAP Data Intelligence**

答案: D

解題說明:

Data governance is the practice of ensuring that data is accurate, available, and secure across an organization.

SAP Data Intelligence is the primary component within SAP BTP that addresses this need. It provides advanced metadata management and data cataloging capabilities, which are the foundations of governance. A data catalog acts like a "search engine" for enterprise data, allowing users to understand the origin (lineage), quality, and sensitivity of the information they are working with. In a complex SAP Business Suite environment, data often moves through multiple stages and systems. SAP Data Intelligence tracks this "data lineage," showing how data was transformed as it moved from an ERP system to a reporting dashboard. This transparency is crucial for regulatory compliance (like GDPR) and for building trust in the data used for decision-making. If a financial report looks incorrect, governance tools allow IT to trace the data back to its source to find the error. By positioning Data Intelligence as the governance hub, SAP BTP ensures that the "Intelligent Enterprise" is built on a foundation of high-quality, trusted data. This is a significant differentiator from tools like SAP BusinessObjects (which focuses on reporting) or SAP Concur (which focuses on expenses), as Data Intelligence provides the underlying control layer for the entire data ecosystem.

問題 #29

Which SAP BTP service allows businesses to create low-code/no-code applications?

- **A. SAP Build Apps**
- B. SAP Concur
- C. SAP BusinessObjects
- D. SAP Business Network

答案: A

解題說明:

To accelerate digital transformation, SAP has introduced the SAP Build portfolio on BTP, which is specifically designed to democratize application development. SAP Build Apps (formerly AppGyver) is the primary service within this portfolio that enables the creation of enterprise-grade applications using a no-code visual environment. This service allows users to build sophisticated user interfaces for mobile and web applications by simply dragging and dropping components. It also includes a visual logic editor, which eliminates the need to write traditional code for defining how the application behaves.

The strategic importance of SAP Build Apps within the SAP Business Technology Platform is its ability to reduce the backlog of IT departments. By allowing business experts—who understand the process but may not know how to code—to build their own solutions, SAP ensures that innovation can happen at the "front lines" of the business. These apps can easily be connected to SAP S/4HANA or other backend systems through secure APIs, ensuring that data integrity is maintained. This contrasts with tools like SAP BusinessObjects, which is focused on business intelligence and reporting, or SAP Concur, which is a specific SaaS application for travel and expense management. SAP Build Apps is a foundational service for positioning BTP as an agile platform for rapid extension and innovation.

問題 #30

Which market trend is driving the adoption of SAP BTP?

- **A. Increased need for data-driven decision-making.**
- B. Reduced emphasis on business automation.
- C. Declining use of cloud-based solutions.
- D. Decreasing focus on API-based integrations.

答案: A

解題說明:

One of the most powerful market trends driving the global adoption of SAP BTP is the increased need for data-driven decision-making. In today's hyper-competitive landscape, "gut feeling" is no longer a viable strategy for business leaders. Organizations are sitting on mountains of data, but the challenge lies in extracting actionable insights from it. SAP BTP addresses this trend by providing a unified environment where data management, analytics, and AI converge. This allows businesses to transform raw data into a strategic asset, enabling more accurate forecasting, optimized operations, and enhanced customer experiences.

This trend is further accelerated by the "Digital Transformation" movement, where companies are moving away from monolithic, isolated systems toward agile, interconnected platforms. Businesses now demand real-time visibility across their entire value chain-

from procurement to sales. SAP BTP's ability to integrate disparate systems and provide a "single source of truth" through SAP HANA Cloud and SAP Analytics Cloud directly addresses this market demand. As companies strive to become "Intelligent Enterprises," they rely on BTP to provide the technical infrastructure that supports continuous innovation, rapid automation, and the ability to pivot their business models based on data-driven evidence rather than historical assumptions.

問題 #31

Which SAP BTP component helps businesses extract insights from structured and unstructured data?

- A. SAP SuccessFactors
- B. SAP Business Network
- C. SAP Integration Suite
- **D. SAP Data Intelligence**

答案： D

解題說明：

In today's data landscape, business value is hidden not just in "structured" databases (like tables and spreadsheets) but also in "unstructured" data (like images, sensor logs, and social media feeds). SAP Data Intelligence is the specific component of SAP BTP designed to manage this diversity. It is a comprehensive data management solution that provides data orchestration, data cataloging, and powerful machine learning integration. It allows data scientists and engineers to create "data pipelines" that ingest, transform, and analyze data regardless of its source or format.

The role of SAP Data Intelligence within the SAP Business Suite is to turn "dark data" into actionable insights. For example, it can take unstructured maintenance logs from factory machinery and combine them with structured financial data to predict the total cost of ownership of an asset. By providing a unified view of the entire data landscape-whether that data resides in an SAP HANA database, a non-SAP data warehouse, or a cloud "data lake"-it ensures that decision-makers have a complete picture. This capability is vital for advanced AI and machine learning projects, as it provides the robust data foundation required to train accurate models, thereby positioning SAP BTP as a leader in enterprise data orchestration.

問題 #32

How does SAP Business AI enhance SAP BTP's capabilities?

- **A. By enabling AI-driven automation and decision-making.**
- B. By replacing all existing business processes with AI-only solutions.
- C. By restricting AI usage to SAP ERP modules.
- D. By eliminating machine learning capabilities.

答案： A

解題說明：

SAP Business AI is the strategic layer that infuses intelligence directly into the business applications running on SAP BTP. It enhances the platform's capabilities by enabling AI-driven automation and intelligent decision-making across the entire enterprise value chain. Unlike generic AI, SAP Business AI is trained on industry-specific data and business semantics, ensuring that the insights it provides are relevant to specific corporate functions like finance, supply chain, and HR.

By leveraging services within BTP-such as SAP AI Core and SAP AI Launchpad-Business AI allows organizations to move from manual, reactive processes to proactive, automated ones. For example, it can automate the matching of incoming payments to invoices or predict potential supply chain disruptions before they occur. This positioning is critical for the SAP Business Suite because it doesn't just add a "feature"; it transforms the fundamental nature of the software from a "system of record" to a "system of intelligence." This allows human workers to focus on higher-value strategic tasks while the AI handles high-volume, repetitive data processing and provides data-backed recommendations, thereby significantly increasing organizational agility and competitive advantage.
