Cisco 300-620 Exam Study Material of ITdumpsfree in 3 Formats

Before we start develop a new 300-620 study materials, we will prepare a lot of materials. After all, we must ensure that all the questions and answers of the 300-620 study materials are completely correct. First of all, we have collected all relevant reference books. Most of the 300-620 Study Materials are written by the famous experts in the field. They are widely read and accepted by people. Through careful adaption and reorganization, all knowledge will be integrated in our 300-620 study materials.

Cisco Implementing Cisco Application Centric Infrastructure Sample Questions (Q81-Q86):

NEW QUESTION # 81

An engineer configured a bridge domain with the hardware-proxy option for Layer 2 unknown unicast traffic. Which statement is true about this configuration?

- A. The Layer 2 unknown hardware proxy lacks support of the topology change notification.
- B. The leaf switch forwards the Layers 2 unknown unicast packets to all other leaf switches if it is unable to find the MAC address in its local forwarding tables.
- C. The leaf switch drops the Layer 2 unknown unicast packet if it is unable to find the MAC address in the local forwarding tables.
- D. The spine switch drops the Layer 2 unknown unicast packet if it is unable to find the MAC address in the proxy database.

Answer: C

NEW QUESTION # 82

A network administrator configures AAA inside the Cisco ACI fabric. The authentication goes through the local users if the TACACS+ server is not reachable. If the Cisco APIC is out of the cluster, the access must be granted through the fallback domain. Which configuration set meets these requirements?

- A. Ping Check: True
Default Authentication Realm: Local
Fallback Check: True
- B. Ping Check: True
Default Authentication Realm: TACACS+
Fallback Check: False
- C. Ping Check: False
Default Authentication Realm: Local
Fallback Check: False
- D. Ping Check: False

Default Authentication Realm: TACACS+
Fallback Check: True

Answer: D

NEW QUESTION # 83

An engineer wants to monitor all configuration changes, threshold crossing, and link-state transitions in a Cisco ACI fabric. Which action must be taken to receive the required messages?

- A. Add Session Logs and Audit Logs to the monitor policy.
- B. Include Audit Logs and Events in the Syslog source policy.
- C. Include Events and Session Logs in the Syslog source policy.
- D. Add Faults and Events to the monitor policy.

Answer: A

Explanation:

After searching, there is nothing called "syslog source policy" in ACI. Syslog source policy exists in UCS Central. The choices now are on "Monitoring Policy" that exists on A and C.

https://community.cisco.com/legacyfs/online/attachments/blog/technote-aci-syslog_external-latest.pdf

https://www.cisco.com/c/en/us/td/docs/switches/datacenter/aci/apic/sw/all/faults/guide/b_APIC_Faults_Errors/b_IFC_Faults_Errors_chapter_010.html

❖ Configuration Steps:

1. Access the APIC Admin GUI.
2. Select **FABRIC -> FABRIC POLICIES**.
3. In the Policies navigation panel on the left, select and expand the **MONITORING POLICIES**.
 - Expand **DEFAULT** and Select **"CALLHOME/SNMP/SYSLOG"**.
 - In the "Callhome/SNMP/Syslog" configuration panel, Select **SYSLOG** as the "Source Type" and Click on the "+" sign to **CREATE SYSLOG SOURCE**.
 - In the "Create SYSLOG Source" configuration panel, perform the following actions:
 - Enter **Source Name** (deadbeef-syslogSrc)
 - Change **MIN SEVERITY** to **INFORMATION**
 - Select the **"CHECK ALL"** button to include: **Audit logs, Events, Faults, and Session logs**.
 - Select the **SYSLOG Monitoring Destination Group** that was created in a previous task (deadbeef-syslogGrp)
 - **Click Submit**

Event Objects and Logs

In the *Cisco APIC Management Information Model Reference*, the **event** package contains general event-related object classes, although some event types are found in other packages.

A loggable event is represented by an event record object, which is an immutable, stateless, and persistent MO created by the system to record the occurrence of a specific set of conditions at a given point in time. Although an event record MO is usually triggered by conditions in another MO, it is not contained by that MO but is contained in an event log.

Each new event record MO is added to one of three separate event logs, depending on the cause of the event:

- **Audit log**—Holds objects that are records of user-initiated events such as logins and logouts (aaa:SessionLR) or configuration changes (aaa:ModLR) that are required to be auditable.
- **Health score log**—Holds records of changes in the health score (health:Record) of the system or components.
- **Event log**—Holds records of other system-generated events (event:Record) such as **link state transitions**.

Each log collects and retains event records. An event MO remains in the log until it is purged when the log reaches capacity and space is needed for new event records. The retention and purge behavior for each log is specified in a record retention policy (event:ARetP) object associated with each log.

NEW QUESTION # 84

A customer must deploy three Cisco ACI based data centers. Each site must be separated from the others. Which characteristic of Cisco ACI Multi-Pod makes it unsuitable for this deployment?

- A. has distance and scale limitations
- B. places leaf switches in the remote site that belong to the same fabric as at the headquarters site
- C. creates a virtual pod in the remote location
- D. requires all pods to share the same Cisco APIC cluster

Answer: D

NEW QUESTION # 85

A network administrator configures AAA inside the Cisco ACI fabric. The authentication goes through the local users if the TACACS+ server is not reachable. If the Cisco APIC is out of the cluster, the access must be granted through the fallback domain. Which configuration set meets these requirements?

- A. Ping Check: True
Default Authentication Realm: Local
Fallback Check: True
- B. Ping Check: True
Default Authentication Realm: TACACS+
Fallback Check: False
- C. Ping Check: False
Default Authentication Realm: Local
Fallback Check: False
- **D. Ping Check: False
Default Authentication Realm: TACACS+
Fallback Check: True**

Answer: D

NEW QUESTION # 86

.....

We have a lot of regular customers for a long-term cooperation now since they have understood how useful and effective our 300-620 actual exam is. In order to let you have a general idea about the shining points of our 300-620 training materials, i would like to introduce the free demos of our 300-620 study engine for you. There are the real and sample questions in the free demos to show you that how valid and latest our 300-620 learning dumps are. So just try now!
