Oracle Cloud Infrastructure 2024 Application Integration Professional Sample Questions (Q100-Q105):

NEW QUESTION # 100

Your design of an asynchronous OIC integration flow includes the requirement for additional processing logic that is conditionally based on the results returned to the integration instance from earlier external service invocations. You decide to leverage the Switch action to facilitate this implementation.

Which is a valid consideration concerning the configuration and capabilities of the Switch action?

- A. Any data objects returned within a branch of a Switch action will only be visible within the implicit scope of that branch and not visible in the main flow of the integration outside of the Switch action.
- B. All branches within the Switch action must have a conditional expression defined.
- C. You may need to create conditional expressions for each branch with greater complexity because nested Switch actions are not supported.
- **D. XPath version 2.0 functions can be used to create more complex conditional expressions for a branch.**

Answer: D

Explanation:

XPath version 2.0 functions can be used within the Switch action to create complex conditional expressions for branch evaluation in OIC.

NEW QUESTION # 101

Your team is using a JavaScript library function within an Oracle Integration Cloud (OIC) integration flow.

Because of business requirements, one of the functions needs to be updated with additional code to incorporate new logic. Which consideration regarding JavaScript library functions is NOT valid?

- A. The JavaScript action has a timeout threshold of 60 seconds.
- B. Network, disk, or thread access is not supported from within a JavaScript function.
- **C. JavaScript functions are not allowed to make outbound calls to external services.**
- D. Active integrations using a function that has been updated must be reactivated.

Answer: C

Explanation:

Comprehensive and Detailed Explanation:

JavaScript Constraints:

* A: False-outbound calls are allowed with restrictions.

- C. 2 seconds
- D. 1 second

Answer: B

Explanation:

The default value for Command Notification Timeout in Oracle Cloud is 5 seconds.

NEW QUESTION # 103

GlobalTech Corporation uses Oracle Integration (OIC) to synchronize data between their CRM and ERP systems. They currently have a schedule pattern integration that runs nightly at 3 AM. With the implementation of a new CRM system that supports real-time data synchronization, GlobalTech wants to update their ERP system immediately after any data changes in the CRM. To achieve this, they wish to convert the schedule integration to an application pattern integration, allowing the CRM system to explicitly call the integration upon data changes. When implementing this conversion, which of these considerations is NOT valid?

- A. You cannot convert a scheduled integration with assignments that have the fault data type.
- B. During conversion, you must choose an existing REST Adapter trigger connection resource.
- **C. After conversion, existing scheduled parameters will be automatically converted to integration properties.**
- D. You cannot convert a scheduled integration to a REST Adapter-triggered integration with multiple verbs.

Answer: C

Explanation:

Comprehensive and Detailed Explanation:

Conversion Considerations:

* A:False-no auto-conversion of parameters.

NEW QUESTION # 104

In Oracle Integration Cloud (OIC), you are working on an integration that uses a REST trigger, which will require##(authentication). You need to ensure that only authorized clients can access the integration. Which configuration should you apply?

- A. Enable Cross-Origin Resource Sharing (CORS) and set an API key in the REST adapter configuration.
- B. Set up an IP whitelist in the OIC instance, allowing only specific IP addresses to access the integration.
- **C. Configure the REST adapter with a Basic Authentication or OAuth 2.0 security policy and provide the required credentials.**
- D. Encrypt the payload using a custom encryption algorithm and provide the decryption key to authorized clients.

Answer: C

Explanation:

Comprehensive and Detailed Explanation:

Securing a REST trigger in OIC involves:

- * Option B:Configuring the REST adapter with Basic Authentication or OAuth 2.0 ensures only authorized clients with valid credentials can invoke it- the standard approach.
- * Option A:CORS controls browser access, not authentication; API keys aren't natively supported here.
- * Option C:IP whitelisting is possible but less granular and not adapter-specific.
