If you want to pass your exam and get your certification, we can make sure that our Confluent Certified Developer guide questions will be your ideal choice. Our company will provide you with professional team, high quality service and reasonable price. In order to help customers solve problems, our company always insist on putting them first and providing valued service. We deeply believe that our CCDAK question torrent will help you pass the exam and get your certification successfully in a short time. Maybe you cannot wait to understand our CCDAK Guide questions; we can promise that our products have a higher quality when compared with other study materials. At the moment I am willing to show our CCDAK guide torrents to you, and I can make a bet that you will be fond of our products if you understand it.

The CCDAK Certification Exam is an important certification for developers who want to work with Kafka and Confluent's platform. It demonstrates to employers and clients that a developer has the skills and knowledge necessary to build and manage Kafka-based applications using Confluent's platform. In addition, the certification can help developers advance their careers and increase their earning potential.

CCDAK Valid Test Sims & Exam CCDAK Cost

In order to meet the different need from our customers, the experts and professors from our company designed three different versions of our CCDAK exam questions for our customers to choose, including the PDF version, the online version and the software version. Though the content of the CCDAK Study Materials is the same, but the displays are totally different to make sure that our customers can study our CCDAK learning guide at any time and condition.

Confluent Certified Developer for Apache Kafka Certification Examination Sample Questions (Q26-Q31):

NEW QUESTION # 26

(You are writing lightweight XML messages to a Kafka topic named userinfo.
Which format should you use for the value field?)

- A. ByteSerializer
- B. StringSerializer
- C. VoidSerializer
- D. XmlSerializer

Answer: B

Explanation:

Apache Kafka does not impose any schema or message format; it treats records as byte arrays on the wire.

Serialization is therefore the responsibility of the producer. For lightweight XML messages, the most common and recommended approach is to represent the XML as a UTF-8 encoded string and use Kafka's built-in StringSerializer.

The official Kafka producer documentation provides StringSerializer as the standard serializer for textual data formats, including XML and JSON. This serializer converts Java String objects into byte arrays using UTF-8 encoding, making it simple, efficient, and interoperable with a wide range of consumers.

Option A is incorrect because Kafka does not provide a built-in XmlSerializer. Option C (ByteSerializer) could technically work, but it would require manually converting the XML string to a byte array, which adds unnecessary complexity for lightweight XML payloads. Option D (VoidSerializer) is used only when no value is sent and is not applicable here.

Therefore, using StringSerializer for the value field is the correct and officially supported approach for sending lightweight XML messages in Kafka.

NEW QUESTION # 27

Which type of system best describes Apache Kafka? (Choose 2.)

- A. Distributed commit log
- B. Quorum based
- C. Leader-follower
- D. FIFO
- E. Publish-subscribe messaging

Answer: A,E

NEW QUESTION # 28

Match each configuration parameter with the correct option.

To answer choose a match for each option from the drop-down. Partial credit is given for each correct answer.

□

Answer:

Explanation:

□ Explanation:

Correct Matches

* path.format#Only valid for some Source Connectors

* value.converter#Valid for all Source Connectors

* input.path#Only valid for some Source Connectors

* errors.retry.timeout#Valid for all Source Connectors

* tasks.max#Valid for all Source Connectors

* path.formatThis is a connector-specific configuration, commonly used by file-based or storage-based source connectors (for example, HDFS, S3, or FilePulse connectors). It is not part of the Kafka Connect framework itself, so it is only valid for some source connectors.

* value.converterThis is a worker-level configuration that defines how record values are converted (JSON, Avro, Protobuf, etc.). It applies to all connectors running on the worker unless overridden at the connector level.

* input.pathThis configuration is specific to file-based source connectors (e.g., FileStreamSourceConnector). It is not universally supported, so it is only valid for some source connectors.

* errors.retry.timeoutThis is part of Kafka Connect's error handling framework, introduced to support retries and tolerance of transient errors. It is a generic Connect configuration and valid for all connectors.

* tasks.maxThis is a mandatory, generic connector configuration that controls the maximum number of tasks a connector may create. It is valid for all source (and sink) connectors.

NEW QUESTION # 29

Suppose you have 6 brokers and you decide to create a topic with 10 partitions and a replication factor of 3. The brokers 0 and 1 are on rack A, the brokers 2 and 3 are on rack B, and the brokers 4 and 5 are on rack C. If the leader for partition 0 is on broker 4, and the first replica is on broker 2, which broker can host the last replica? (select two)

- A. 0
- B. 1
- C. 2
- D. 3
- E. 4
- F. 5

Answer: B,C

Explanation:

When you create a new topic, partitions replicas are spread across racks to maintain availability. Hence, the Rack A, which currently does not hold the topic partition, will be selected for the last replica

NEW QUESTION # 30

You are running a Kafka Streams application in a Docker container managed by Kubernetes, and upon application restart, it takes a long time for the docker container to replicate the state and get back to processing the data. How can you improve dramatically the application restart?

- A. Increase the number of Streams threads
- B. Increase the number of partitions in your inputs topic
- C. Mount a persistent volume for your RocksDB
- D. Reduce the Streams caching property

Answer: C

Explanation:

Although any Kafka Streams application is stateless as the state is stored in Kafka, it can take a while and lots of resources to recover the state from Kafka. In order to speed up recovery, it is advised to store the Kafka Streams state on a persistent volume, so that only the missing part of the state needs to be recovered.

NEW QUESTION # 31

.....

Consistent practice with it relieves exam stress and boosts self-confidence. The web-based CCDAK practice exam does not require additional software installation. All operating systems also support this Confluent Certified Developer for Apache Kafka Certification Examination (CCDAK) practice test. We update our Confluent Certified Developer for Apache Kafka Certification Examination (CCDAK) pdf format regularly so keep calm because you will always get updated Confluent Certified Developer for Apache Kafka Certification Examination (CCDAK) questions.
