Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q48-Q53):

NEW QUESTION # 48

What does endpoint isolation in Cisco AMP for Endpoints security protect from?

- A. an infection spreading across the network E
- B. a malware spreading across the user device
- C. a malware spreading across the LDAP or Active Directory domain from a user account
- **D. an infection spreading across the LDAP or Active Directory domain from a user account**

Answer: D

Explanation:

<https://community.cisco.com/t5/endpoint-security/amp-endpoint-isolation/t5-p/4086674#:~:text=Isolating%20an%20endpoint%20blocks%20all,your%20IP%20isolation%20allow%20list>

NEW QUESTION # 49

Which method is used to deploy certificates and configure the supplicant on mobile devices to gain access to network resources?

- A. Simple Certificate Enrollment Protocol
- B. Client provisioning
- C. BYOD on boarding
- D. MAC authentication bypass

Answer: C

Explanation:

When supporting personal devices on a corporate network, you must protect network services and enterprise data by authenticating and authorizing users (employees, contractors, and guests) and their devices. Cisco ISE provides the tools you need to allow employees to securely use personal devices on a corporate network.

Guests can add their personal devices to the network by running the native supplicant provisioning (Network Setup Assistant), or by adding their devices to the My Devices portal.

Because native supplicant profiles are not available for all devices, users can use the My Devices portal to add these devices manually; or you can configure Bring Your Own Device (BYOD) rules to register these devices.

When supporting personal devices on a corporate network, you must protect network services and enterprise data by authenticating and authorizing users (employees, contractors, and guests) and their devices. Cisco ISE provides the tools you need to allow employees to securely use personal devices on a corporate network.

Guests can add their personal devices to the network by running the native supplicant provisioning (Network Setup Assistant), or by adding their devices to the My Devices portal.

Because native supplicant profiles are not available for all devices, users can use the My Devices portal to add these devices manually; or you can configure Bring Your Own Device (BYOD) rules to register these devices.

NEW QUESTION # 50

Drag and drop the cloud security assessment components from the left onto the definitions on the right.

user entity behavior assessment	develop a cloud security strategy and roadmap aligned to business priorities
cloud data protection assessment	identify strengths and areas for improvement in the current security architecture during onboarding
cloud security strategy workshop	understand the security posture of the data or activity taking place in public cloud deployments
cloud security architecture assessment	detect potential anomalies in user behavior that suggest malicious behavior in a Software-as-a-Service application

Answer:

Explanation:

NEW QUESTION # 51

Which compliance status is shown when a configured posture policy requirement is not met?

- A. unknown
- **B. noncompliant**
- C. authorized
- D. compliant

Answer: B

Explanation:

Posture is a service in Cisco Identity Services Engine (Cisco ISE) that allows you to check the state, also known as posture, of all the endpoints that are connecting to a network for compliance with corporate security policies.

A posture policy is a collection of posture requirements that are associated with one or more identity groups and operating systems. Posture-policy requirements can be set to mandatory, optional, or audit types in posture policies.

+ If a mandatory requirement fails, the user will be moved to Non-Compliant state

+ If an optional requirement fails, the user is allowed to skip the specified optional requirements and the user is moved to Compliant state This Q did not clearly specify the type of posture policy requirement (mandatory or optional) is not met so the user can be in Non-compliant or compliant state. But "noncompliant" is the best answer here.
