

Fire-Inspector-II Official Practice Test | Fire-Inspector-II Cost Effective Dumps

Fire Inspector 2 Questions with complete Solutions

1. What two physical properties of flammable liquids are used to classify them? - ✓✓ A. Flash Point
B. Boiling point
2. The amount of heat given off by a particular substance during the combustion process is called?
- ✓✓ Heat of Combustion
3. The minimum temperature at which a liquid gives off sufficient vapor to form an ignitable mixture at the surface but not sufficient to sustain combustion is called its _____ -
✓✓ Flash Point
4. Name the standard developed by the national Fire Protection Association to regulate the manufacture, storage, and handling of aerosol products _____ - ✓✓ NFPA 30B
5. _____ liquids may be dispensed by gravity from approved equipment? - ✓✓ Flammable
6. Special sprinkler requirements for flammable liquid storage facilities can be found in _____
- ✓✓ NFPA 30
7. A container is any vessel with a capacity equal to or less than _____ - ✓✓ 60 Gallons
8. Stationary tanks must be identified using the _____ hazard identification system. - ✓✓ High
9. Underground storage tanks (UTS) are tested with air at _____ PSI prior to being placed within the excavation - ✓✓ 3-5 PSI
10. The storage arrangement in which aerosol products are stored throughout the facility intermixed with other commodities is called _____ storage. - ✓✓ Nonsegregated Storage

International Code Council Fire-Inspector-II Cost Effective Dumps | New Fire-Inspector-II Exam Bootcamp

Our 67 - Fire Inspector II Exam study question has high quality. So there is all effective and central practice for you to prepare for your test. With our professional ability, we can accord to the necessary testing points to edit Fire-Inspector-II exam questions. With many years work experience, we have fast reaction speed to market change and need. In this way, we have the Latest Fire-Inspector-II Test Guide. You don't worry about that how to keep up with the market trend, just follow us. In addition to the industry trends, the Fire-Inspector-II test guide is written by lots of past materials' rigorous analyses.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q42-Q47):

NEW QUESTION # 42

Given: A nonsprinklered commercial Type II-B building has a fire flow requirement of 7,000 gpm. If a sprinkler system is installed throughout the building, the new required fire flow is at least ____ gpm. (Assume that the new required fire flow is sufficient to meet the requirements of the sprinkler system.)

- A. 2,250
- B. 1,750
- C. 2,000
- **D. 1,500**

Answer: D

Explanation:

IFC Section 903.3.5 and Appendix B (Fire-Flow Requirements) allow a reduction in fire flow when sprinklers are installed. For a Type II-B building (noncombustible, unprotected), the base fire flow (7,000 gpm) reflects a large, unsprinklered structure (e.g., per Table B105.1(2)). With full sprinkler protection, IFC B105.2 permits a reduction to as low as 25% of the original flow or the sprinkler demand (whichever is greater), typically

1,500 gpm for commercial buildings per NFPA 13 standards, assuming adequate water supply. Options B, C, and D exceed this minimum without justification. Thus, A is correct.

Reference: IFC 2021, Section 903.3.5, Appendix B, Table B105.1(2).

NEW QUESTION # 43

Where requirements for fire safety are not specifically provided for by the International Fire Code, which of the following shall have the responsibility to determine the applicable requirements?

- A. Legal counsel.
- B. Board of appeals.
- **C. Fire code official.**
- D. City manager.

Answer: C

Explanation:

According to the International Fire Code (IFC) 2021, when specific fire safety requirements are not explicitly provided for in the code, the responsibility to determine the applicable requirements falls upon the Fire Code Official.

Reference from the IFC (2021):

IFC Section 104.1 - General Authority and Responsibilities:

This section explicitly grants the Fire Code Official the authority to interpret the code and determine the necessary safety measures in cases where the code does not provide specific guidance.

It states: "The fire code official is hereby authorized to enforce the provisions of this code and shall have the authority to render interpretations of the code and to adopt policies and procedures in order to clarify the application of its provisions." IFC Section 104.9 - Alternative Materials and Methods:

This section further supports the authority of the Fire Code Official by allowing them to approve alternative fire safety measures when strict compliance with the code is not feasible.

Why Other Options Are Incorrect?

A: City Manager:

The city manager is responsible for administrative and operational management but does not have the authority to interpret or enforce fire code requirements.

B: Legal Counsel:

Legal counsel provides legal advice but does not have jurisdiction over fire safety code enforcement.

C: Board of Appeals:

The board of appeals reviews disputes and interpretations made by the Fire Code Official, but they do not have primary responsibility for determining applicable fire safety requirements.

Final Conclusion:

The Fire Code Official is the designated authority responsible for interpreting and applying fire safety requirements in situations where the International Fire Code (IFC) does not explicitly provide specific provisions.

NEW QUESTION # 44

What fire-resistance rating is required for interior nonbearing wall and partitions in Type IV construction?

- A. 1-1/2 hours
- B. 1 hour
- C. 2 hours
- **D. 0 hours**

Answer: D

Explanation:

The fire-resistance rating requirements for different building elements in Type IV (Heavy Timber) construction are specified in the 2021 International Building Code (IBC), Table 601 - Fire-Resistance Rating Requirements for Building Elements (Hours).

IBC Table 601 - Fire Resistance for Type IV Construction:

Interior nonbearing walls and partitions in Type IV construction require 0 hours of fire resistance.

This is because Type IV construction primarily relies on large, heavy timber elements that provide inherent fire resistance.

Why Other Options Are Incorrect?

B). 1 hour - Incorrect, as nonbearing interior walls in Type IV construction are not required to have a fire- resistance rating.

C). 1-1/2 hours - Not required by code.

D). 2 hours - Only structural elements like exterior walls in some cases may require fire resistance, but nonbearing interior partitions do not.

Correct answer: A. 0 hours

NEW QUESTION # 45

A building under construction which has two stairways shall have a minimum of how many fire extinguishers per floor?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

Reference to Fire Extinguisher Requirements in Buildings Under Construction:

NFPA 241 (Standard for Safeguarding Construction, Alteration, and Demolition Operations) Section 13.6.1 and IFC 3309.1 require that:

A minimum of one fire extinguisher per floor is required.

Additional extinguishers are required based on stairwells and floor area.

If a building under construction has two stairways, a minimum of two fire extinguishers must be provided per floor to ensure adequate fire protection coverage.

Fire Safety Considerations for Construction Sites:

Construction sites pose a high fire risk due to temporary electrical systems, combustible materials, and lack of finished fire suppression systems.

Fire extinguishers must be readily available and evenly distributed near exit stairways and pathways for rapid access in case of an emergency.

Clarification of Incorrect Answer Choices:

A: 1 # Incorrect

One extinguisher is the minimum required for floors with only one exit/stairway, but a building with two stairways requires at least two extinguishers.

C: 3 # Incorrect

While more extinguishers can be added for larger areas or high-risk work zones, the minimum requirement remains two for two stairwells.

D: 4 # Incorrect

There is no general requirement for four extinguishers per floor unless dictated by floor size and hazard level.

Conclusion:

The correct and verified answer is B (2 fire extinguishers per floor) based on NFPA 241 and IFC 3309.1, ensuring compliance with fire safety standards for buildings under construction.

NEW QUESTION # 46

The maximum quantity of liquefied petroleum gas (LP-gas) in containers stored by a dealer awaiting resale, and are at one location in a building that is not accessible to the public, is ___ lb. water capacity.

- A. 2,000
- B. 0
- C. 2,500
- D. 1,000

Answer: A

Explanation:

The storage of liquefied petroleum gas (LP-gas) in containers by dealers awaiting resale is regulated by the 2021 International Fire Code (IFC), Section 6109 - Storage of Portable LP-Gas Containers.

IFC 6109.11 - Storage Within Buildings Not Accessible to the Public:

"Storage of LP-gas containers in buildings that are not accessible to the public shall be limited to a maximum aggregate quantity of 2,000 pounds water capacity at one location." Why Other Options Are Incorrect?

A). 735 lb. - Too low; the maximum allowed is 2,000 lb.

B). 1,000 lb. - Incorrect; IFC allows up to 2,000 lb.

D). 2,500 lb. - Exceeds the 2,000 lb. maximum permitted storage quantity.

Correct answer: C. 2,000 lb.

NEW QUESTION # 47

.....

It is universally accepted that in this competitive society in order to get a good job we have no choice but to improve our own capacity and explore our potential constantly, and try our best to get the related Fire-Inspector-II certification is the best way to show our professional ability, however, the exam is hard nut to crack and there are so many Fire-Inspector-II Preparation questions related to the exam, it seems impossible for us to systematize all of the key points needed for the exam by ourselves.
