

2026 H13-511_V5.5: HCIA-Cloud Computing V5.5 Newest Practice Exams Free

P.S. Free 2026 Huawei H13-511_V5.5 dumps are available on Google Drive shared by BootcampPDF:
https://drive.google.com/open?id=1EFUQ3uW5PtMBiqD5CUc_sjuLwjXWM1w8

The Huawei H13-511_V5.5 exam questions are being offered in three different formats. These formats are HCIA-Cloud Computing V5.5 (H13-511_V5.5) PDF dumps files, desktop practice test software, and web-based practice test software. All these three HCIA-Cloud Computing V5.5 (H13-511_V5.5) exam dumps formats contain the real HCIA-Cloud Computing V5.5 (H13-511_V5.5) exam questions that assist you in your HCIA-Cloud Computing V5.5 (H13-511_V5.5) practice exam preparation and finally, you will be confident to pass the final H13-511_V5.5 exam easily.

Huawei H13-511_V5.5 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Understand the differences between virtualization and cloud computing: This section clarifies how virtualization and cloud computing are related yet distinct technologies. It explains that virtualization is a key enabler of cloud computing but cloud encompasses broader service delivery models and characteristics.
Topic 2	<ul style="list-style-type: none">Understand KVM technology: This topic focuses on Kernel-based Virtual Machine (KVM) as a specific virtualization solution for Linux systems. It covers how KVM transforms Linux into a hypervisor to manage virtual machines efficiently.
Topic 3	<ul style="list-style-type: none">Be able to describe what virtualization is: This topic covers the concept of virtualization technology and how it enables multiple virtual instances to run on physical hardware. It explains the foundational role virtualization plays in creating isolated computing environments.
Topic 4	<ul style="list-style-type: none">Describe the history of cloud computing: This section traces the evolution and development of cloud computing from its origins to its current state. It provides historical context for how cloud technology emerged and transformed over time.
Topic 5	<ul style="list-style-type: none">Describe the characteristics of cloud computing: This section explains the essential attributes and defining features of cloud computing such as on-demand self-service, broad network access, and resource pooling. It outlines what distinguishes cloud computing from traditional computing models.

100% Pass Huawei - H13-511_V5.5 - The Best Practice HCIA-Cloud Computing V5.5 Exams Free

Are you looking for valid IT exam materials or study guide? You can try our free Huawei H13-511_V5.5 new exam collection materials. We offer free demo download for our PDF version. You can know several questions of the real test. It can make you master fundamental knowledge quickly. Our H13-511_V5.5 new exam collection materials are authorized legal products. Our accuracy is nearly 100% pass which will help you clear exam.

Huawei HCIA-Cloud Computing V5.5 Sample Questions (Q59-Q64):

NEW QUESTION # 59

FusionAccess can use a provisioned full copy VM as a full copy VM template. Place the following operations in the correct order.

Answer:

Explanation:

Explanation:

Step

Operation

Step 1

Update template.

Step 2

Delete user.

Step 3

Remove VM from domain.

Step 4

Reset built-in password of administrator.

Step 5

Configure template.

Step 6

Convert VM into template.

Step

Operation

Technical Rationale

Step 1

Update template

Power on the VM to install the latest OS patches and software updates.

Step 2

Delete user

Remove user profiles and personal data to ensure the master image is clean.

Step 3

Remove VM from domain

Disjoin the VM from the AD domain to prevent Security Identifier (SID) or account name conflicts on new clones.

Step 4

Reset built-in administrator password

Set a secure, standardized baseline credential for the local administrator account.

Step 5

Configure template

Run the Huawei Desktop Preparation Tool to optimize the OS and encapsulate the system.

Step 6

Convert VM into template

Use the management console to officially mark the VM as a read-only template resource.

Initialization (Steps 1-4): Before a VM can be turned into a "Golden Image," it must be stripped of its unique identity. This includes removing it from any Active Directory (AD) domain and clearing out specific user accounts. Failing to remove the VM from the domain can lead to "duplicate computer name" errors when new desktops are provisioned from the final template.

System Encapsulation (Step 5): The "Configure template" phase is often synonymous with Sysprep or the Huawei-specific encapsulation process. This step resets the OS clock and generalizations, such as the hardware-dependent drivers, so the image can boot correctly on any host in the cluster.

Finalization (Step 6): Once converted into a template, the VM is no longer a running instance. It becomes a master file that the ITA (IT Adapter) uses for rapid service provisioning.

According to the official Huawei HCIA-Cloud Computing documentation, converting a provisioned full-copy virtual machine (VM) back into a template is a specific administrative workflow used for updating "Golden Images" without starting from a bare VM. The process must follow a logical sequence to ensure that the final template is clean, generalized, and compatible with the FusionAccess

management plane.

The workflow begins with Step 1: Update template, which involves powering on the VM to install necessary software patches, security updates, or new applications. Once updated, Step 2: Delete user is performed to remove any cached user profiles, temporary files, or local user data that should not exist in the master image.

Step 3: Remove VM from domain is a critical step to ensure that the VM is no longer associated with a specific Active Directory security identifier (SID) or domain account, preventing SID conflicts when the template is later used to provision multiple new desktops.

Following the domain disjunction, Step 4: Reset built-in password of administrator is required to ensure the FusionAccess system can maintain management access via a known, local credential during the subsequent automation phases. Step 5: Configure template involves running the Huawei Desktop Preparation Tool. This tool performs system encapsulation (similar to Sysprep), optimizes the OS for VDI usage, and prepares the Huawei Desktop Agent (HDA). Finally, Step 6: Convert VM into template is the final action performed in the FusionCompute or FusionAccess management console. This marks the VM as a read-only template resource, ready to be used by the ITA (IT Adapter) for rapid service provisioning.

NEW QUESTION # 60

Voice recognition, image recognition, and emotional escort robots are all applications of artificial intelligence.

- A. True
- B. False

Answer: A

NEW QUESTION # 61

Which of the following statements is false about Redundant Array of Independent Disks (RAID)?

- A. RAID 5 uses parity check to ensure data reliability.
- B. RAID 1 uses mirroring to ensure user data reliability.
- C. RAID 6 uses mirroring to ensure user data reliability.
- D. RAID 0 uses striping to improve data read and write performance.

Answer: C

Explanation:

Comprehensive and Detailed Explanation (HCIA-Cloud Computing aligned):

RAID technology is a key topic in the Storage Technology Basics domain of HCIA-Cloud Computing.

Different RAID levels provide varying balances of performance, capacity, and fault tolerance.

* RAID 0 (A) uses data striping across multiple disks to improve read/write performance but provides no data redundancy. This statement is correct.

* RAID 1 (C) uses disk mirroring, where identical data is written to two disks, ensuring high data reliability. This statement is correct.

* RAID 5 (D) uses distributed parity across disks, allowing data recovery if one disk fails. This is also correct.

* RAID 6 (B) is the false statement. RAID 6 does not use mirroring. Instead, it uses dual parity, allowing the system to tolerate the failure of two disks simultaneously.

Therefore, option B is incorrect and is the false statement.

NEW QUESTION # 62

The virtual machine in FusionCompute needs to communicate with the outside through a virtual switch. Which of the following descriptions about DVS is correct? (Multiple choice)

- A. DVs support VLAN division
- B. DVs function like normal physical switches
- C. DVS supports pure software virtual switching function based on open source OVS (Open vSwitch)
- D. DVs only supports connecting virtual machines to realize system network intercommunication

Answer: A,B,C

NEW QUESTION # 63

Computing virtualization can be classified into different categories from different perspectives, which can be divided into type and virtualization, and can also be divided into full virtualization and paravirtualization.

- A. True
- B. False

Answer: A

NEW QUESTION # 64

.....

Because the effect is outstanding, the H13-511_V5.5 study materials are good-sale, every day there are a large number of users to browse our website to provide the H13-511_V5.5 study guide materials, through the screening they buy material meets the needs of their research. Every user cherishes the precious time, seize this rare opportunity, they redouble their efforts to learn our H13-511_V5.5 Exam Questions, when others are struggling, why do you have any reason to relax? So, quicken your pace, follow the H13-511_V5.5 test materials, begin to act, and keep moving forward for your dreams!
